

Worksheet 5: Examples for Climate Change Considerations Check List

Here are suggested examples of specific elements/chapters of the 2012 Plan that would demonstrate how the Plan is addressing climate change impacts:

- Identification of the desired planning standard for sea level rise, i.e., how much to plan for and in what time frame.
- Guidelines for local agencies for fulfilling requirement of 200-year level of protection under climate change scenarios.
- Guidelines on what actions need to occur to preserve the delta channels in the face of sea level rise and altered storm patterns.
- Types of facilities needed to accommodate a certain level of conditions caused by climate change.
- Documentation of process for incorporating/reconciling Corps and DWR guidelines.

In light of the key aspects of climate change you have identified that should be incorporated into the 2012 CVFPP, what **other** examples for CVFPP can you suggest?
