

Geology, Seismicity, Minerals and Soils

WOULD THE PROJECT...

- Reduce the availability of a mineral resource?
- Result in substantial erosion or loss of topsoil?
- Be located on expansive soil, creating risks to life or property?
- Expose people or structures to potential adverse effects due to:
 - Fault service rupture?
 - Earthquake ground shaking?
 - Liquefaction and other seismic-induced geologic hazards?
 - Landslides?
 - Soft, loose, and compressible soils?
