Subject: Comments re: SBx7-6

To Whom It May Concern:

Concern has been expressed that giving the precise location of wells to be monitored would expose the landowners' wells to less security and possible vandalism.

Recommendation: To get buy-off, acceptance to participate in the program, why not only require location of monitored wells by Township, Range, and Section rather than GPS coordinates. This would address security concerns by the landowners. By approaching the public listing of monitored wells in this manner, this might also allow the listing of municipal wells without fear of vandalism.

Thank you.
