Explanation
50
Unconfined Water Table Contour
Lines of Depth Elevation to Water in Unconfined and Semiconfined Aquifers; Contours are Dashed Where Inferred; Contour Interval 5, 10, 20, 50, and 100 Feet
Ground Water Barrier
Note: The intent of this map is to provide a general depiction of the depth to groundwater over broad areas of the San Joaquin Valley. It should not be used to determine site specific depth to groundwater information. Site specific depth and elevation data are available on the world wide web at http://well.water.ca.gov/. Areas of perched groundwater exist within the unconfined aquifer. Perched groundwater is groundwater that occurs above the regional water table and is not contoured. Groundwater depth contours do not represent a water surface and therefore cannot be used to determine or estimate groundwater flow direction or gradient. If there are questions on this map please contact the San Joaquin District.
