Q1. PROPOSAL DESCRIPTION

Provide a brief abstract of the Proposal, including a listing of individual project titles or types.

The Project includes the construction of conveyance systems including detention basins, channels and storm drains to collect storm water and control run off while removing debris, silt and other contaminants and providing a comprehensive solution for non-point source pollution generated from a 6.5 square mile drainage basin. The detention basins will be of the extended type and will incorporate a variety of water quality BMPs as described in the County's BMP Design Handbook, including bio-swales, infiltration sub-basins, infiltration trenches and sand filters. These BMPs will blend in with the basin framework consisting of the sediment forebay, pilot channel, micropool and erosion resistant vegetation. The BMPs will both improve the water quality of captured runoff and provide demonstrations of proven BMPs to encourage their incorporation into the community's local site planning efforts.
