

G. Surface Water Diverter Compliance

Table 1-5 lists project proponents that divert surface water supply and are subject to the State Water Resources Control Board's (SWRCB's) diversion reporting requirements per CWC Section 5100 and agency contact information. Surface Water Diverter compliance documentation from these agencies is included in the following pages. A text discussion of surface water diversion compliance is provided below Table 1-5.

Table 1-5. Surface Water Diversifiers Included in the Proposal

Agency Name	Agency Contact
Marin Municipal Water District	Krishna Kumar (415) 945-1460, kkumar@marinwater.org
Santa Clara Valley Water District	Aaron Baker (408) 630-2135, abaker@valleywater.org

Compliance with California Water Code, Division 2, Part 5.1

MMWD – In accordance with the reporting requirements specified in California Water Code, Division 2, Part 5.1, Section 5100 et seq., MMWD files Supplemental Statements of Diversion and Use with the SWRCB on 3-year intervals. For water diverted and used in 2012, 2013, and 2014, MMWD filed its 3-year Supplemental Statements in June 2015. The next deadline for reporting water diversions under MMWD's pre-1914 water rights claims is June 30, 2018. As such, MMWD is in compliance with the SWRCB's surface water diversion reporting requirements.

SCVWD – SCVWD currently diverts surface water and submits progress reports to the SWRCB for the following creeks in Santa Clara County under appropriative water rights claims: Almaden (Permits 004916 and 004920, Licenses 002205 and 002209), Calero (Permit 004919 and License 002208), Coyote (Permits 005061, 005062, 008494, 014704; Licenses 007211, 002210, 007212, 010607), Guadalupe (Permits 003009, 004917, 005428; Licenses 006943, 002206, 002837), Llagas (Permits 008488 and 012933, Licenses 006404 and 009829), Los Gatos (Permits 003010, 004921, 007689; Licenses 011791, 006944, 005729), Penitencia (Permit 006565), Stevens (Permit 004918, License 002207), and Uvas (Permit 010000, License 006422). SCVWD is in compliance with the SWRCB's surface water diversion reporting requirements; SCVWD filed diversion reports to the SWRCB on June 27, 2014.

10. Storage

Reservoir name	Spilled this year	Feet below spillway at maximum storage	Completely emptied	Feet below spillway at minimum storage	Method used to measure water level
Nicasio	Yes		No	20.8	Hydrostatic Pressure device

Conservation of Water

11. Are you now employing water conservation efforts?	Yes
Description of water conservation efforts	MMWD is a charter member of CUWCC and is an original signatory to the CUWCC MOU. MMWD is in compliance with all CUWCC BMPs/DMMs.
12. Amount of water conserved	8600 Acre-Feet

Water Quality and Wastewater Reclamation

13. During the period covered by this Report, did you use reclaimed water from a wastewater treatment facility, water from a desalination facility, or water polluted by waste to a degree which unreasonably affects the water for other beneficial uses?	Yes
14. Amount of reclaimed, desalinated, or polluted water used	579 Acre-Feet

Conjunctive Use of Groundwater and Surface Water

15. During the period covered by this Report, were you using groundwater in lieu of available surface water authorized under your permit?	No
16. Amounts of groundwater used	

Additional Remarks

7. Storage

Reservoir name	Spilled this year	Feet below spillway at maximum storage	Completely emptied	Feet below spillway at minimum storage	Method used to measure water level
Soulajule Lake	Yes		No	25	Hydrostatic Pressure Device

Conservation of Water

8. Are you now employing water conservation efforts?	Yes
Description of water conservation efforts	MMWD is a charter member of CUWCC and is an original signatory to the CUWCC MOU. MMWD is in compliance with all CUWCC BMPs/DMMs.
9. Amount of water conserved	8600 Acre-Feet

Water Quality and Wastewater Reclamation

10. During the period covered by this Report, did you use reclaimed water from a wastewater treatment facility, water from a desalination facility, or water polluted by waste to a degree which unreasonably affects the water for other beneficial uses?	Yes
11. Amount of reclaimed, desalinated, or polluted water used	579 Acre-Feet

Conjunctive Use of Groundwater and Surface Water

12. During the period covered by this Report, were you using groundwater in lieu of available surface water authorized under your license?	No
13. Amounts of groundwater used	

Additional Remarks

5. The amounts of water reported as diverted or used reflects consumptive use only. 3,122 acre feet of water were released from Soulajule Lake for instream flow purposes on Arroyo Sausal and Walker Creek. 6. The maximum rate of diversion reflects direct diversion to consumptive use.

11. Are you now employing water conservation efforts?	Yes
Description of water conservation efforts	MMWD is a charter member of CUWCC and is an original signatory to the CUWCC MOU. MMWD is in compliance with all CUWCC BMPs/DMMs.
12. Amount of water conserved	8600 Acre-Feet

Water Quality and Wastewater Reclamation	
13. During the period covered by this Report, did you use reclaimed water from a wastewater treatment facility, water from a desalination facility, or water polluted by waste to a degree which unreasonably affects the water for other beneficial uses?	Yes
14. Amount of reclaimed, desalinated, or polluted water used	579 Acre-Feet

Conjunctive Use of Groundwater and Surface Water	
15. During the period covered by this Report, were you using groundwater in lieu of available surface water authorized under your permit?	No
16. Amounts of groundwater used	

Additional Remarks
Releases from Kent Lake totaling 6,281 acre feet were made for instream flow purposes under the terms of permits 5633,9390 and 18546 for fish and wildlife protection/enhancement. 9 The amounts reported for maximum rate of diversion reflect consumptive use only. There were no direct diversions to consumptive use pre the conditions of this permit.

6a. Construction work has commenced	Yes
6b. Construction is completed	Yes
6c. Beneficial uses of water has	Yes

commenced	
6d. Project will be completed within the time period specified in the permit	No
6e. Explanation of work remaining to be done	Since the mid 1990s, regulatory guidelines and requirements have limited SCVWD's ability to fully operate the Upper Penitencia Creek (Noble) diversion. In 1994, SCVWD implemented National Marine Fisheries Service guidelines with respect to the approach velocity for the fish screens installed at the Penitencia Creek diversion facility. In 1995, SCVWD signed a Memorandum of Understanding with the California Department of Fish and Wildlife, which required SCVWD to make a 1 cubic foot per second (cfs) bypass flow through the diversion dam at this facility at all times. In 1998, SCVWD constructed a fish ladder and revised operation for the diversion dam to maintain flow of at least 2.5 cfs through the ladder for the benefit of fish and public trust resources. In May 2015, the SCVWD submitted a change petition to the SWRCB, Permits and Licensing Unit, to update this permit. The permit seeks to clarify the use of water in Upper Penitencia Creek and the quantities put to beneficial use.
6f. Estimated date of completion	12/31/2015

7. Purpose of Use

Domestic	Domestic use via groundwater recharge in northern Santa Clara County

Conservation of Water

11. Are you now employing water conservation efforts?	Yes
	The SCVWD has implemented an aggressive Water Conservation Program which is essential to improving the SCVWD's water supply reliability- water savings achieved from conservation reduce both current and future water demand. In 2014, the SCVWD's water

Description of water conservation efforts	conservation activities resulted in a reduction in the SCVWD's beneficial use of local surface water supplies pursuant to the SCVWD's 17 licenses and permit 006565. The reported amount of water conserved (60,000 acre-feet) is a District-wide total for calendar year 2014. The SCVWD is a signatory to the California Urban Water Conservation Council's Memorandum of Understanding (adopted by the SCVWD Board of Directors in 1991) and has committed to implementing a number of Best Management Practices (BMPs) for urban water conservation. Additionally, as a contracting party to the Central Valley Project, SCVWD implements the numerous urban BMPs, as well as BMPs related to agriculture as required by the Central Valley Project Improvement Act. A detailed description of the SCVWD's water conservation activities is set forth in the SCVWD's annual "Water Conservation Report," a copy of which is available on the SCVWD website at http://www.valleywater.org .
12. Amount of water conserved	60000 Acre-Feet

Water Quality and Wastewater Reclamation

13. During the period covered by this Report, did you use reclaimed water from a wastewater treatment facility, water from a desalination facility, or water polluted by waste to a degree which unreasonably affects the water for other beneficial uses?	Yes
14. Amount of reclaimed, desalinated, or polluted water used	22140 Acre-Feet

Conjunctive Use of Groundwater and Surface Water

15. During the period covered by this Report, were you using groundwater in lieu of available surface water authorized under your permit?	Yes
16. Amounts of groundwater used	161990 Acre-Feet

Additional Remarks

Precipitation was below average in Santa Clara County for the rainfall year July 1, 2013 through June 30, 2014. Actually it was 42% of average at the San Jose station. For question 4 (Purpose of Use), the reported irrigated acreage represents calendar year 2014 average acreage for northern Santa Clara County (SCVWD water charge zone W-2). For question 5 (Amount of Water Diverted and Used), appropriations and uses are for water year October 2013 through September 2014. In general, SCVWD's 18 local water rights provide for capturing or directly diverting seasonal flow from major watersheds in the county. The majority of this water eventually percolates to underground storage in the county's two groundwater subbasins: the Santa Clara Plain and Llagas Subbasin. Water supplies are comingled and subsequently pumped by various individuals and water purveyors for consumptive uses. Natural percolation to the aquifers also occurs. It is difficult to associate pumping with specific water rights and/or an annual appropriation. SCVWD operates to achieve overall prudent conjunctive management of surface water supplies and storage and groundwater storage, to effectively utilize both local and imported water supplies for reliable current and future water supply, minimization of waste, and stewardship of aquatic habitat. For question 11 (Water Quality and Wastewater Reclamation), the reported amount of recycled water is a District-wide total for calendar year 2014. For question 13 (Conjunctive Use of Groundwater and Surface Water), the reported amount is a District-wide total for calendar year 2014 and represents the lesser of: (1) reduction in the use of surface water supplies or (2) groundwater pumping in excess of groundwater recharge from local, controlled sources.

Conservation of Water

8. Are you now employing water conservation efforts?	Yes
Description of water conservation efforts	The SCVWD has implemented an aggressive Water Conservation Program which is essential to improving the SCVWD's water supply reliability - water savings achieved from conservation reduce both current and future water demand. In 2014, the SCVWD's water conservation activities resulted in a reduction in the SCVWD's beneficial use of local surface water supplies pursuant to the SCVWD's 17 licenses and permit 006565. The reported amount of water conserved (60,000 acre-feet) is a District-wide total for calendar year 2014. The SCVWD is a signatory to the California Urban Water Conservation Council's Memorandum of Understanding (adopted by the SCVWD Board of Directors in 1991) and has committed to implementing a number of Best Management Practices (BMPs) for urban water conservation. Additionally, as a contracting party to the Central Valley Project, SCVWD implements the numerous urban BMPs, as well as BMPs related to agriculture as required by the Central Valley Project Improvement Act. A detailed description of the SCVWD's water conservation activities is set forth in the SCVWD's annual "Water Conservation Report," a copy of which is available on the SCVWD website at http://www.valleywater.org .
9. Amount of water conserved	60000 Acre-Feet

Water Quality and Wastewater Reclamation

10. During the period covered by this Report, did you use reclaimed water from a wastewater treatment facility, water from a desalination facility, or water polluted by waste to a degree which unreasonably affects the water for other beneficial uses?	Yes
11. Amount of reclaimed, desalinated, or polluted water used	22140 Acre-Feet

Conjunctive Use of Groundwater and Surface Water

12. During the period covered by this Report, were you using groundwater in lieu of available surface water authorized under your license?	Yes
13. Amounts of groundwater used	161990 Acre-Feet

Additional Remarks

Precipitation was below average in Santa Clara County for the rainfall year July 1, 2013 through June 30, 2014. Actually it was 42% of average at the San Jose station. For question 4 (Purpose of Use), the reported irrigated acreage represents calendar year 2014 average acreage for northern Santa Clara County (SCVWD water charge zone W-2). For question 5 (Amount of Water Diverted and Used), appropriations and uses are for water year October 2013 through September 2014. In general, SCVWD's 18 local water rights provide for capturing or directly diverting seasonal flow from major watersheds in the county. The majority of this water eventually percolates to underground storage in the county's two groundwater subbasins: the Santa Clara Plain and Llagas Subbasin. Water supplies are comingled and

subsequently pumped by various individuals and water purveyors for consumptive uses. Natural percolation to the aquifers also occurs. It is difficult to associate pumping with specific water rights and/or an annual appropriation. SCVWD operates to achieve overall prudent conjunctive management of surface water supplies and storage and groundwater storage, to effectively utilize both local and imported water supplies for reliable current and future water supply, minimization of waste, and stewardship of aquatic habitat. For question 11 (Water Quality and Wastewater Reclamation), the reported amount of recycled water is a District-wide total for calendar year 2014. For question 13 (Conjunctive Use of Groundwater and Surface Water), the reported amount is a District-wide total for calendar year 2014 and represents the lesser of: (1) reduction in the use of surface water supplies or (2) groundwater pumping in excess of groundwater recharge from local, controlled sources.

Comments: There were no Almaden-Calero Canal operations for water year 2014 due to the continuing drought conditions throughout California. Transfer of local water from Almaden Reservoir to Calero Reservoir was temporarily suspended because of the low storage at Almaden Reservoir, and ongoing drought conditions of the watershed supplying Almaden reservoir during the transfer period from December 1st through May 1st. Storage at Almaden reservoir was 61 AF on December 1, 2013; around 55 AF on January 1 and February 1, 2014; 235 AF on March 1; 440 AF on April 1; and 581 AF on May 1.

Conservation of Water

8. Are you now employing water conservation efforts?	Yes
Description of water conservation efforts	The SCVWD has implemented an aggressive Water Conservation Program which is essential to improving the SCVWD's water supply reliability - water savings achieved from conservation reduce both current and future water demand. In 2014, the SCVWD's water conservation activities resulted in a reduction in the SCVWD's beneficial use of local surface water supplies pursuant to the SCVWD's 17 licenses and permit 006565. The reported amount of water conserved (60,000 acre-feet) is a District-wide total for calendar year 2014. The SCVWD is a signatory to the California Urban Water Conservation Council's Memorandum of Understanding (adopted by the SCVWD Board of Directors in 1991) and has committed to implementing a number of Best Management Practices (BMPs) for urban water conservation. Additionally, as a contracting party to the Central Valley Project, SCVWD implements the numerous urban BMPs, as well as BMPs related to agriculture as required by the Central Valley Project Improvement Act. A detailed description of the SCVWD's water conservation activities is set forth in the SCVWD's annual "Water Conservation Report," a copy of which is available on the SCVWD website at http://www.valleywater.org .

Description of water conservation efforts	The SCVWD has implemented an aggressive Water Conservation Program which is essential to improving the SCVWD's water supply reliability ? water savings achieved from conservation reduce both current and future water demand. In 2014, the SCVWD's water conservation activities resulted in a reduction in the SCVWD's beneficial use of local surface water supplies pursuant to the SCVWD's 17 licenses and permit 006565. The reported amount of water conserved (60,000 acre-feet) is a District-wide total for calendar year 2014. The SCVWD is a signatory to the California Urban Water Conservation Council's Memorandum of Understanding (adopted by the SCVWD Board of Directors in 1991) and has committed to implementing a number of Best Management Practices (BMPs) for urban water conservation. Additionally, as a contracting party to the Central Valley Project, SCVWD implements the numerous urban BMPs, as well as BMPs related to agriculture as required by the Central Valley Project Improvement Act. A detailed description of the SCVWD's water conservation activities is set forth in the SCVWD's annual ?Water Conservation Report,? a copy of which is available on the SCVWD website at http://www.valleywater.org .
9. Amount of water conserved	60000 Acre-Feet

Water Quality and Wastewater Reclamation

10. During the period covered by this Report, did you use reclaimed water from a wastewater treatment facility, water from a desalination facility, or water polluted by waste to a degree which unreasonably affects the water for other beneficial uses?	Yes
11. Amount of reclaimed, desalinated, or polluted water used	22140 Acre-Feet

Conjunctive Use of Groundwater and Surface Water

12. During the period covered by this Report, were you using groundwater in lieu of available surface water authorized under your license?	Yes
13. Amounts of groundwater used	161990 Acre-Feet

Additional Remarks

Precipitation was below average in Santa Clara County for the rainfall year July 1, 2013 through June 30, 2014. Actually it was 42% of average at the San Jose station. For question 4 (Purpose of Use), the reported irrigated acreage represents calendar year 2014 average acreage for southern Santa Clara County (SCVWD water charge zone W-5). For question 5 (Amount of Water Diverted and Used), appropriations and uses are for water year October 2013 through September 2014. In general, SCVWD's

18 local water rights provide for capturing or directly diverting seasonal flow from major watersheds in the county. The majority of this water eventually percolates to underground storage in the county's two groundwater subbasins: the Santa Clara Plain and Llagas Subbasin. Water supplies are comingled and subsequently pumped by various individuals and water purveyors for consumptive uses. Natural percolation to the aquifers also occurs. It is difficult to associate pumping with specific water rights and/or an annual appropriation. SCVWD operates to achieve overall prudent conjunctive management of surface water supplies and storage and groundwater storage, to effectively utilize both local and imported water supplies for reliable current and future water supply, minimization of waste, and stewardship of aquatic habitat. For question 11 (Water Quality and Wastewater Reclamation), the reported amount of recycled water is a District-wide total for calendar year 2014. For question 13 (Conjunctive Use of Groundwater and Surface Water), the reported amount is a District-wide total for calendar year 2014 and represents the lesser of: (1) reduction in the use of surface water supplies or (2) groundwater pumping in excess of groundwater recharge from local, controlled sources.

The SCVWD is a signatory to the California Urban Water Conservation Council's Memorandum of Understanding (adopted by the SCVWD Board of Directors in 1991) and has committed to implementing a number of Best Management Practices (BMPs) for urban water conservation. Additionally, as a contracting party to the Central Valley Project, SCVWD implements the numerous urban BMPs, as well as BMPs related to agriculture as required by the Central Valley Project Improvement Act. A detailed description of the SCVWD's water conservation activities is set forth in the SCVWD's annual "Water Conservation Report," a copy of which is available on the SCVWD website at http://www.valleywater.org .
9. Amount of water conserved	60000 Acre-Feet

Water Quality and Wastewater Reclamation

10. During the period covered by this Report, did you use reclaimed water from a wastewater treatment facility, water from a desalination facility, or water polluted by waste to a degree which unreasonably affects the water for other beneficial uses?	Yes
11. Amount of reclaimed, desalinated, or polluted water used	22140 Acre-Feet

Conjunctive Use of Groundwater and Surface Water

12. During the period covered by this Report, were you using groundwater in lieu of available surface water authorized under your license?	Yes
13. Amounts of groundwater used	161990 Acre-Feet

Additional Remarks

Precipitation was below average in Santa Clara County for the rainfall year July 1, 2013 through June 30, 2014. Actually it was 42% of average at the San Jose station. For question 4 (Purpose of Use), the reported irrigated acreage represents calendar year 2014 average acreage for northern Santa Clara County (SCVWD water charge zone W-2). For question 5 (Amount of Water Diverted and Used), appropriations and uses are for water year October 2013 through September 2014. In general, SCVWD's 18 local water rights provide for capturing or directly diverting seasonal flow from major watersheds in the county. The majority of this water eventually percolates to underground storage in the county's two groundwater subbasins: the Santa Clara Plain and Llagas Subbasin. Water supplies are comingled and

subsequently pumped by various individuals and water purveyors for consumptive uses. Natural percolation to the aquifers also occurs. It is difficult to associate pumping with specific water rights and/or an annual appropriation. SCVWD operates to achieve overall prudent conjunctive management of surface water supplies and storage and groundwater storage, to effectively utilize both local and imported water supplies for reliable current and future water supply, minimization of waste, and stewardship of aquatic habitat. For question 11 (Water Quality and Wastewater Reclamation), the reported amount of recycled water is a District-wide total for calendar year 2014. For question 13 (Conjunctive Use of Groundwater and Surface Water), the reported amount is a District-wide total for calendar year 2014 and represents the lesser of: (1) reduction in the use of surface water supplies or (2) groundwater pumping in excess of groundwater recharge from local, controlled sources.

Comments	There were no Masson Diversion (LSA 1600-2009-0414-R3) operations for water year 2014 due to continuing dry conditions. Under terms of the existing Lake or Streambed Alteration Agreement (LSA) with the California Department of Fish and Wildlife for operation of the Masson Diversion, water can only be diverted from Guadalupe Creek if the minimum bypass flow requirements of 3 or 4 cfs (depending on season) can be passed through the fish ladder located at the facility. Bypass flows were below the LSA requirements for the entire water year 2014 and no diversion was performed.

Conservation of Water

8. Are you now employing water conservation efforts?	Yes
Description of water conservation efforts	The SCVWD has implemented an aggressive Water Conservation Program which is essential to improving the SCVWD's water supply reliability - water savings achieved from conservation reduce both current and future water demand. In 2014, the SCVWD's water conservation activities resulted in a reduction in the SCVWD's beneficial use of local surface water supplies pursuant to the SCVWD's 17 licenses and permit 006565. The reported amount of water conserved (60,000 acre-feet) is a District-wide total for calendar year 2014. The SCVWD is a signatory to the California Urban Water Conservation Council's Memorandum of Understanding (adopted by the SCVWD Board of Directors in 1991) and has committed to implementing a number of Best Management Practices (BMPs) for urban water conservation. Additionally, as a contracting party to the Central Valley Project, SCVWD implements the numerous urban BMPs, as well as BMPs related to agriculture as required by the Central Valley Project Improvement Act. A detailed description of the SCVWD's water conservation activities is set forth in the SCVWD's annual "Water Conservation Report," a copy of which is available on the SCVWD website at http://www.valleywater.org .

9. Amount of water conserved	60000 Acre-Feet

Water Quality and Wastewater Reclamation

10. During the period covered by this Report, did you use reclaimed water from a wastewater treatment facility, water from a desalination facility, or water polluted by waste to a degree which unreasonably affects the water for other beneficial uses?	Yes
11. Amount of reclaimed, desalinated, or polluted water used	22140 Acre-Feet

Conjunctive Use of Groundwater and Surface Water

12. During the period covered by this Report, were you using groundwater in lieu of available surface water authorized under your license?	Yes
13. Amounts of groundwater used	161990 Acre-Feet

Additional Remarks

Precipitation was below average in Santa Clara County for the rainfall year July 1, 2013 through June 30, 2014. Actually it was 42% of average at the San Jose station. For question 4 (Purpose of Use), the reported irrigated acreage represents calendar year 2014 average acreage for northern Santa Clara County (SCVWD water charge zone W-2). For question 5 (Amount of Water Diverted and Used), appropriations and uses are for water year October 2013 through September 2014. In general, SCVWD's 18 local water rights provide for capturing or directly diverting seasonal flow from major watersheds in the county. The majority of this water eventually percolates to underground storage in the county's two groundwater subbasins: the Santa Clara Plain and Llagas Subbasin. Water supplies are comingled and

subsequently pumped by various individuals and water purveyors for consumptive uses. Natural percolation to the aquifers also occurs. It is difficult to associate pumping with specific water rights and/or an annual appropriation. SCVWD operates to achieve overall prudent conjunctive management of surface water supplies and storage and groundwater storage, to effectively utilize both local and imported water supplies for reliable current and future water supply, minimization of waste, and stewardship of aquatic habitat. For question 11 (Water Quality and Wastewater Reclamation), the reported amount of recycled water is a District-wide total for calendar year 2014. For question 13 (Conjunctive Use of Groundwater and Surface Water), the reported amount is a District-wide total for calendar year 2014 and represents the lesser of: (1) reduction in the use of surface water supplies or (2) groundwater pumping in excess of groundwater recharge from local, controlled sources.

Conservation of Water

8. Are you now employing water conservation efforts?	Yes
Description of water conservation efforts	The SCVWD has implemented an aggressive Water Conservation Program which is essential to improving the SCVWD's water supply reliability - water savings achieved from conservation reduce both current and future water demand. In 2014, the SCVWD's water conservation activities resulted in a reduction in the SCVWD's beneficial use of local surface water supplies pursuant to the SCVWD's 17 licenses and permit 006565. The reported amount of water conserved (60,000 acre-feet) is a District-wide total for calendar year 2014. The SCVWD is a signatory to the California Urban Water Conservation Council's Memorandum of Understanding (adopted by the SCVWD Board of Directors in 1991) and has committed to implementing a number of Best Management Practices (BMPs) for urban water conservation. Additionally, as a contracting party to the Central Valley Project, SCVWD implements the numerous urban BMPs, as well as BMPs related to agriculture as required by the Central Valley Project Improvement Act. A detailed description of the SCVWD's water conservation activities is set forth in the SCVWD's annual "Water Conservation Report," a copy of which is available on the SCVWD website at http://www.valleywater.org .

Precipitation was below average in Santa Clara County for the rainfall year July 1, 2013 through June 30, 2014. Actually it was 42% of average at the San Jose station. For question 4 (Purpose of Use), the reported irrigated acreage represents calendar year 2014 average acreage for southern Santa Clara County (SCVWD water charge zone W-5). For question 5 (Amount of Water Diverted and Used), appropriations and uses are for water year October 2013 through September 2014. In general, SCVWD's 18 local water rights provide for capturing or directly diverting seasonal flow from major watersheds in the county. The majority of this water eventually percolates to underground storage in the county's two groundwater subbasins: the Santa Clara Plain and Llagas Subbasin. Water supplies are comingled and

subsequently pumped by various individuals and water purveyors for consumptive uses. Natural percolation to the aquifers also occurs. It is difficult to associate pumping with specific water rights and/or an annual appropriation. SCVWD operates to achieve overall prudent conjunctive management of surface water supplies and storage and groundwater storage, to effectively utilize both local and imported water supplies for reliable current and future water supply, minimization of waste, and stewardship of aquatic habitat. For question 11 (Water Quality and Wastewater Reclamation), the reported amount of recycled water is a District-wide total for calendar year 2014. For question 13 (Conjunctive Use of Groundwater and Surface Water), the reported amount is a District-wide total for calendar year 2014 and represents the lesser of: (1) reduction in the use of surface water supplies or (2) groundwater pumping in excess of groundwater recharge from local, controlled sources.
