

### **Attachment 13. IRWM Plan Reduce Delta Water Dependence**

None of the projects receive water from the Sacramento-San Joaquin Delta and thus will not help to reduce dependence on Delta water supply.

The Project Region does not directly receive water supplied from the Sacramento- San Joaquin Delta. However, the flood water and spring meltwater benefits and the water quality improvements associated with the projects mean that the Tulare Basin and the Kern River watershed in particular might need less water imported from the Delta.
