

QUALITY ASSURANCE

The Borrego Water District is aware of the California Water Code Section 100780-10782.3, also referred to as the Groundwater Monitoring Act of 2001, and will adhere to the guidelines prescribed in the code. In addition, District Standard Operating Procedures will be followed in collection of water samples and reporting chain of custody. All samples will be submitted to the California Groundwater Ambient Monitoring and Assessment (GAMA) in the format required for that data submission.

Open boreholes to be sampled will be covered at the surface to ensure public safety and to prevent contaminant intrusion into the aquifer.

Personnel qualification will include professional registrations (California Professional Geologist/Hydrogeologist), certifications and professional experience of person performing and overseeing the work to be performed.
