

**OBGMA 2012 LOCAL GROUNDWATER ASSISTANCE GRANT
ATTACHMENT 9. PAST PERFORMANCE**

The OBMGA is very pleased with its past performance in Local Groundwater Assistance (LGA) grant receipt and product. Most recently, the OBGMA Received high marks in the evaluation of the "Ojai Basin Groundwater Model." The DWR Grantee Performance Evaluation letter for that project is attached.

Among the results of the modeling is the importance of measuring the streamflow as a major component of basin recharge. It is the recommendations of this effort that stressed the need for implementing the Inflow/Outflow Study, which is a natural follow-on effort to the model at this project cycle.

Importantly, OBGMA Hydrogeologist Mr. Jordan Kear was instrumental in working with consultants in implementing the model, and will be intimately involved in all phases of the streamflow monitoring program. He maintains expertise and experience in conducting similar streamflow monitoring programs throughout California.
