### DWR Schedules Third Snow Survey of 2006-2007 Season

SACRAMENTO--The next snow survey by the California Department of Water Resources will take place at 11 a.m. Wednesday, February 28, 2007, near Lake Tahoe.

Historic Phillips Station, Highway 50 and Sierra at Tahoe Road, (about 90 miles east of Sacramento) is the site of the manual survey. Media representatives are advised to bring snowshoes or cross-country skis. Complete snow course measurements should be available by noon.

Parking is permitted only in the area along Highway 50 near the survey site...not along Sierra at Tahoe Road.

Monthly measurements are made through April to help determine spring runoff into reservoirs.

In addition to this single manually measured site, reporters can find real-time readings of statewide water content posted on the Internet in date order (newest at the bottom) at <http://cdec.water.ca.gov/cgi-progs/lreports/DLYSWEQ>.

#### Importance of Snow Surveying

Snow-water content is important in determining the coming year's water supply. The measurements help hydrologists prepare water supply forecasts as well as provide others, such as hydroelectric power companies and the recreation industry, with much needed data.

Monitoring is coordinated by the Department of Water Resources as part of the multi-agency California Cooperative Snow Surveys Program. Surveyors from more than 50 agencies and utilities visit hundreds of snow measurement courses each month to gauge the amount of water in the State's snowpack.
