## Pyramid Lake Algal Bloom Tested at ‘Warning’ Level; Recreational Users Should Take Care To Avoid Algae

Sacramento – The Department of Water Resources (DWR) today elevated its algal bloom advisory for Pyramid Lake in Los Angeles County to “Warning,” which means boaters and other recreational users should not swim in the main body of the lake. Based on today’s field test, the advisory for Emigrant Swim Beach remains at “Caution” and is unchanged since mid-July. Swimming is still allowed at that beach, but recreational users are urged to avoid direct contact with blue-green algae.

Bloom conditions can change rapidly, and wind and waves may move or concentrate the bloom into different regions of the lake. The algal bloom can appear as blue-green, white or brown foam, scum or mats that can float on the water’s surface and accumulate along the shoreline and boat ramp area.

Blue-green algae can pose health risks, particularly to children and pets. Visitors to Pyramid Lake are urged to choose safe water activities while recreating there. They should avoid ingesting water in all areas of the lake. Pets should be kept away from the water in all areas under advisory.

Recreational exposure to toxic blue-green algae can cause eye irritation, allergic skin rash, mouth ulcers, vomiting, diarrhea, and cold and flu-like symptoms. Pets can be especially susceptible because they tend to drink while in the water and lick their fur afterwards.

The [Statewide Guidance on Cyanobacteria and Harmful Algal Blooms](#) recommends the following for waters impacted by blue-green algae:

- Take care that pets and livestock do not drink the water, swim through algae, scums or mats or lick their fur after going in the water. Rinse pets in clean water to remove algae from fur.
- Avoid wading, swimming or jet or water skiing in water containing algae blooms or scums or mats.
- Do not drink, cook or wash dishes with untreated surface water from these areas under any circumstances; common water purification techniques such as camping filters, tablets and boiling do not remove toxins.
- People should not eat mussels or other bivalves collected from these areas. Limit or avoid eating fish from these areas; if fish are consumed, remove the guts and liver, and rinse filets in clean drinking water.
- Get medical treatment immediately if you think that you, your pet or livestock might have been poisoned by blue-green algae toxins. Be sure to alert the medical professional to the possible contact with blue-green algae. Also, make sure to contact the local county public health department.
