

Rafael Valley Groundwater Basin

- Groundwater Basin Number: 3-46
- County: San Luis Obispo
- Surface Area: 2,990 acres (4.7 square miles)

Basin Boundaries and Hydrology

Rafael Valley Groundwater Basin underlies Rafael Valley in southeastern San Luis Obispo County. This basin is bounded by Cretaceous and Miocene age marine rocks (Jennings 1958). The valley is drained by Rafael and San Juan Creeks. The basin is generally parallel to, and is crossed by the Chimeneas fault (Jennings 1958). Precipitation ranges from 8 to 10 inches per year.

Hydrogeologic Information

Water Bearing Formations

Quaternary age alluvium is the principal water-bearing unit in this basin.

Restrictive Structures

The Chimeneas fault crosses the basin (Jennings 1958), but it is not known whether or not this fault is a groundwater barrier.

Recharge Areas

No information is available.

Groundwater Level Trends

No information is available.

Groundwater Storage

Groundwater Storage Capacity. No information is available.

Groundwater in Storage. No information is available.

Groundwater Budget (Type C)

No information is available.

Groundwater Quality

Characterization. No information is available.

Impairments. No information is available.

Well Production characteristics
