Management of the California State Water Project

Covers Activities during Calendar Year 1998

Gray Davis, Governor

State of California

Mary D. Nichols, Secretary for Resources

The Resources Agency

Thomas M. Hannigan, Director

Department of Water Resources

Foreword

Bulletin 132-99, *Management of the California State Water Project*, continues the Bulletin 132 annual series begun in 1963. Bulletin 132-99 updates water supply planning, construction, financing, management, and operation activities of the State Water Project. Appendix B contains data and computations used to determine the State Water Project contractors' Statement of Charges for 2000. Appendix B was previously published as an individual document.

The Bulletin discusses significant events and issues that affect SWP management and operations. The Bulletin covers the period from January 1, 1998, to December 31, 1998.

Bulletin 132-99 also discusses water supply and delivery; plans for the East Branch Extension; deregulation of the electric utilities industry; financial analysis of the SWP; and Delta resources and environmental issues, including the CALFED Bay-Delta Program.

Thomas M. Hannigan
Director

CALIFORNIA WATER COMMISSION

George Gowgani, Ph.D.
Member
San Luis Obispo

Doug Priest
Executive Officer

The California Water Commission serves as a policy advisory body to the Director of Water Resources on all California water resources matters. The 9-member citizen commission provides a water resources forum for the people of the State, acts as a liaison between the legislative and executive branches of State Government, and coordinates federal, State, and local water resources efforts.

Executive Summary

Waterway and wildlife habitat,
Suisun Marsh in the Delta

The Bulletin 132 series began in 1963 and reported the first deliveries of water by the new State Water Project, which was still under construction. Bulletin 132-99, *Management of the California State Water Project*, continues the series with the thirty-sixth edition of the Bulletin. It reports planning, construction, financing, managing, and operating activities of the SWP in 1998. The SWP is operated and maintained by the California Department of Water Resources.

Introduction

The SWP is one of the largest water and power systems in the world. It conveys an average annual 2.4 million acre-feet of water through its 17 pumping plants, 8 hydroelectric powerplants, including 3 pumping-generating plants, 28 dams and reservoirs, and more than 660 miles of aqueducts and pipelines.

In 1998, the SWP delivered 2,755,335 acre-feet of water to 27 of its 29 long-term water contractors and 16 other agencies. The project provides water for approximately 20 million people throughout the state, irrigation for 600,000 acres of farm land, and environmental benefits to wildlife refuges as well as environmental mitigation programs.

Deliveries in winter and early spring 1998 were reduced from recent historical averages because of emergency repairs to the Aqueduct between the Delta and San Luis Reservoir.

The SWP facilitated the transfer or exchange of 147,569 acre-feet of entitlement water among SWP long-term contractors and non-SWP agencies, delivered 62,533 acre-feet of CVP water conveyed through SWP facilities, and provided 903,613 acre-feet to water right holders within the SWP service area.

The Department continued to plan and design the East Branch Extension for San Bernardino and Riverside counties in 1998.

Following deregulation of the California electric industry, the Department became its own energy scheduling coordinator with the California Independent Systems Operator and began scheduling purchases and sales of energy to operate the SWP in 1998.

The project continued to pay bondholders as scheduled and remained financially viable. The 29 long-term water contractors continued to repay project construction bonds and operating expenses. In 1998, the SWP handled approximately \$600 million in income and \$600 million in expenses, with general fund contributions limited to recreation facilities.

1998 Precipitation and Water Storage

The water stored and delivered by the SWP conservation and transportation facilities originates from rainfall and snowmelt in Northern and Central California watersheds, where most of the State's precipitation occurs.

The Department monitors and records annual precipitation and runoff during water years, which run from September 30 to October 1.

Precipitation

Water year 1997-98 was the fourth wet year in a row for Northern California. A strong El Niño in the eastern tropical Pacific Ocean produced above-average precipitation in California, especially the central and southern portions of the State. The water year was marked by big snowpacks and abundant snowmelt runoff.

In contrast to water year 1996-97, coastal watersheds and smaller basins generated flooding in water year 1997-98. The upper Sacramento Valley was also wet; flooding was comparable to the larger floods of record, despite effective flood control operations at Shasta Reservoir. Flood runoff from major Sierra rivers, including the Feather River, was not unusually large.

October started the water year with near-normal precipitation while November was above average, but not unusually wet. December was below average, even with some intense local storms in the South Coast region in early December. Both January and February were extremely wet—February precipitation was nearly three times normal. However, February storms were relatively cool and contributed to a heavy snowpack in the mountains. Winter 1998 had the heaviest snowpack since 1983, another strong El Niño year.

March and April had above-average precipitation, but not nearly as high as February. May was cool and wet. June started out cool and wet, but after the middle of June precipitation diminished. September saw near-normal showers in the mountains.

Runoff

Runoff in the Central Valley rivers in water year 1997-98 was about 20 percent more than in 1996-97. Total runoff for the eight major rivers of the Sacramento-San Joaquin River system was the sixth wettest of record.

Storage

Total storage in major SWP reservoirs was 4.39 million acre-feet on September 30, 1998, the end of water year 1997-98. Total storage in major SWP reservoirs at the end of calendar year 1998 was about 4.4 million acre-feet.

1998 Water Supplies, Contracts, and Deliveries

Water Deliveries

In March 1998, the Department announced projected deliveries of 3.19 million acre-feet of entitlement water in 1998, 100 percent of the amount requested by the 29 long-term water contractors. Because of heavy snowpack and runoff

in 1998, contractors did not require the entire 3.19 million acre feet of water they originally requested. The SWP met all contractors' demands for entitlement water.

Entitlement Water. The SWP delivered 1,745,807 acre-feet of entitlement water to 27 of its 29 long-term water contractors.

Nonproject Water. The contractors also received 99,252 acre-feet of nonproject water, for a total of 1,845,059 acre-feet.

A total of 31,100 acre-feet of nonproject water was exchanged for project water under letter agreements with two long-term contractors.

The SWP also delivered 2,108 acre-feet of recreation/fish and wildlife water and 1,007,420 acre-feet of nonentitlement water to satisfy water rights settlement holders and agreements made with SWP contractors and other agencies, including the U.S. Bureau of Reclamation.

Water rights water is transported through SWP facilities to long-term SWP contractors and other agencies according to terms of various local water rights agreements. Water may pass through SWP transportation facilities or a portion may be stored in SWP reservoirs for release at a later time.

Two South Bay Aqueduct contractors, who hold water rights to runoff from the Lake Del Valle watershed, received 30,358 acre-feet of local water; 517 acre-feet of local runoff were delivered to a contractor in Southern California under local water rights; and nine nonproject agencies in the Feather River area received 872,738 acre-feet.

The Feather River water rights settlement contractors are agencies that held water rights for Feather River water before the SWP was built. The Department negotiated settlements with these water rights holders and agreed to deliver a regulated water supply from Oroville in exchange for the agencies' agreement concerning their Feather River water rights.

Specific information regarding delivery amounts and locations can be found in Chapter 9.

Table ES-1 shows SWP water deliveries by category for the years 1962-98.

Aqueduct Repairs

Deliveries between the Delta and San Luis Reservoir were reduced in winter and early spring 1998, as major emergency repairs took place at mileposts 54.95 and 52.5 in the Aqueduct.

Flows in the Aqueduct between the Delta and San Luis Reservoir were suspended in mid-February after seepage intensified at milepost 54.95. This is the same location where up to 2,000 gallons per minute leaked through the lining in August 1997. Two large cofferdams were built of rock fill and water was removed from a 2,000-foot segment of the canal.

To save the fish in the dewatered canal reach, a crew from the California Conservation Corps waded through the shallow water, netting large catfish and striped bass. The rescued fish were released in a nearby part of the Aqueduct.

The Aqueduct's broken concrete panels were replaced and a new liner was placed over the site of the leak. The permanent repair of milepost 54.95 cost approximately \$3.1 million.

A slipout occurred in March 1998 at milepost 52.5. About 50,000 cubic yards of material were removed from the canal and a series of steel tie-backs installed to stabilize a slope above the west side of the Aqueduct. Since the canal could not be emptied for operational reasons, the repair work was performed in the water. Repair of milepost 52.5, which took 2 months, cost approximately \$1.3 million.

Nonproject Transfers

In 1998, the Department conveyed 62,533 acre-feet of CVP water through SWP facilities for USBR.

Monterey Amendments

The Department did not execute any Monterey Amendments during 1998. Plumas County Flood Control and Water Conservation District, Empire West Side Irrigation District, and Ventura County Flood Control District remain the only long-term

water contractors who have not signed the Monterey Agreement.

Project Development

East Branch Extension

The Department stepped up its efforts to provide water for San Bernardino and Riverside counties through the East Branch Extension. The extension will bring SWP water to Yucaipa, Calimesa, Beaumont, Banning, and other nearby communities, improve groundwater supplies in the Beaumont Storage Basin, and add flexibility to wheel local supplies within the San Bernardino Valley Municipal Water District service area. Figure ES-1 presents a map of the East Branch Extension, Phase I area.

The project, in the planning stages throughout the 1990s, finally cleared major legal, financial, and environmental barriers and was ready for construction by the end of 1998.

The Department is working with two regional water agencies—San Geronimo Pass Water Agency and SBVMWD—to build the pipeline. SGPWA is the last original contractor to receive SWP water.

The completed East Branch Extension will include a reservoir in Crafton Hills and three pumping stations—two of them new—that will link parts of SBVMWD's service area and the eastern part of SGPWA's service area to the California Aqueduct. Phase I will include construction of about 13 miles of new pipeline and the use of approximately 19 miles of pipeline owned by SBVMWD as an interim delivery system. When the needs of SGPWA surpass 16 cfs, which is estimated to occur within 10 to 15 years, Phase II of the East Branch Extension will be built to bypass the SBVMWD Greenspot pipelines and pumping station, which have limited capacity.

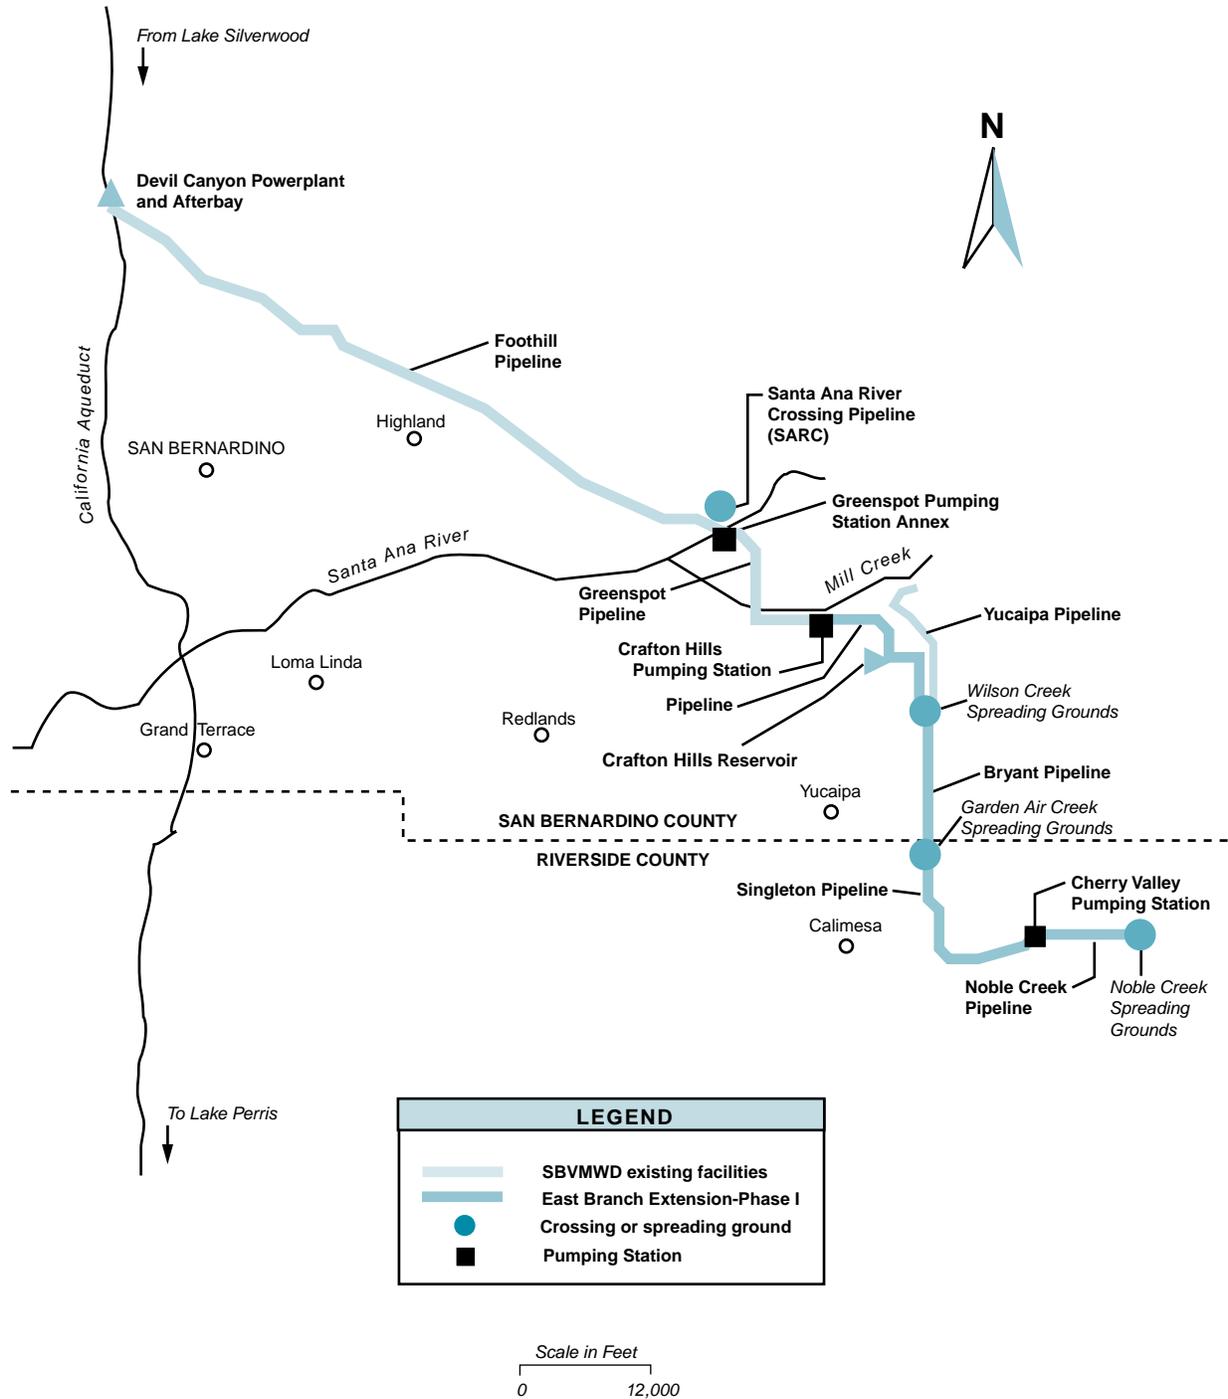

The pipeline will consist of about 13 miles of buried pipe in three contract reaches, conveying water from the Crafton Hills Pumping Station through Crafton Hills Reservoir and Cherry Valley Pumping Station to the Noble Creek spreading grounds.

Table ES-1
SWP Water Delivered by Category, 1962-98
(Acre-Feet)

Year	Entitlement Water ^a			Other Water Deliveries					Total Deliveries (9)
	Municipal & Industrial (1)	Agricultural (2)	Total (3)	Surplus & Unscheduled		Other Water ^b (6)	Feather River Diversions ^c (7)	Fish and Wildlife/ Recreation Water (8)

^a Includes amounts of deliveries of carryover entitlement water and advance entitlement water.
^b Includes amounts of SWP entitlement and non-SWP water conveyed for SWP and non-SWP water contractors.
^c Includes amounts of water diverted according to various water rights agreements.

**Figure ES-1
East Branch Extension, Phase I**

In March 1998, the two water agencies formally adopted the Supplemental EIR and approved construction of the project. The agencies will repay project costs in the form of principal and interest on SWP revenue bonds. About 45 percent of costs are allocated to SBVMWD and 55 percent to SGPWA. In December 1998, the Department sold \$55 million in bonds to provide initial financing for project construction at an interest rate of 4.938 percent.

A major construction contract was advertised in November 1998; construction was scheduled to start in spring 1999.

The balance of the project costs will be financed, as needed, through sales of short-term commercial paper notes and SWP revenue bonds.

An extensive environmental mitigation plan for the project addressed the fact that the pipeline crosses habitat associated with two sensitive species—Plummer’s mariposa lily and the coastal California gnatcatcher—although neither species has been documented in the area.

Power Resources

In 1998, SWP pumping plants consumed 3.45 billion kWh and powerplants generated 5.92 billion kWh of energy. The Department sold 6.9 billion kWh of energy in 1998 to 36 utilities and 19 power marketers for total revenues of \$139.35 million. The Department also received \$16.44 million in revenues for capacity, exchanges, transmission

arrangements, and ancillary services. The sidebar below documents 1998 SWP power generation and consumption.

Deregulation of Electric Utilities

On March 31, 1998, California entered the world of electric utility deregulation as the California Independent System Operator began operation. The ISO, a non-profit public benefit corporation, took control of the operation of the transmission lines of the State’s three investor-owned utilities—Pacific Gas & Electric, Southern California Edison, and San Diego Gas & Electric. The utilities still own the transmission lines, but the ISO coordinates where and how electricity moves throughout the State. Another non-profit public benefit entity created by electric utility deregulation was the California Power Exchange, which conducts a day-ahead market to establish prices and quantity of electricity for delivery for each hour of the following day and a day-of market to allow refinements closer to the delivery hour.

Deregulation was originally envisioned by the California Public Utilities Commission and enacted by the Legislature through Assembly Bill 1890. The bill, signed into law by the Governor in 1996, called for the deregulation of California’s investor-owned utilities and opening the State’s electricity market to competition. The Department was involved in the stakeholder processes that led to setting up the ground rules for the new system.

Power and transmission are crucial to SWP operations. The SWP is the largest single power consumer and the largest user of transmission capacity

SWP Power Generation and Consumption in 1998

Power Generation and Consumption	Millions of Kilowatt Hours
Energy generation by SWP facilities	5,915
Energy purchased under long-term agreements	3,621
Short-term energy purchases	809
Total energy available to the SWP	10,345
Energy sales	(6,900)
Net power consumption of the SWP	3,445

in California. SWP powerplants generate a large portion of the energy needed to move water within the State. The Department meets its remaining power needs by purchasing energy or making energy exchanges with other utilities. Power generated and used by SWP plants is conveyed over transmission lines. Consequently, the Department must also pay for transmission.

The Department relied on PG&E and SCE to submit its energy schedules to the ISO from March 31 through June 30, 1998. On July 1, 1998, the Department became its own Scheduling Coordinator and began to schedule transmission usage directly with the ISO.

As a public entity, the Department is not under the jurisdiction of the California Public Utilities Commission and, unlike the investor-owned utilities, is not required to buy and sell with California Power Exchange. Although the Department began buying and selling excess energy in CalPX's day-ahead market in July 1998, the Department can also buy and sell directly with other public entities and

power marketers in California or outside California—whichever brings the best prices.

The deregulated industry has provided new opportunities and new markets for SWP power. In August 1998, the Department began participating in the ISO's ancillary services markets. Ancillary services are required by the ISO to ensure grid reliability. The Department's ability to control both its loads and generation allows the Department to readily participate in such markets.

Financial Analysis

In 1998, the Department continued to pay bondholders as scheduled. The SWP was financially viable and was indirectly paid for by the approximately 20 million water users who were served by the project. Direct payment was through the 29 long-term water contractors. In 1998, the SWP handled approximately \$600 million in income and \$600 million in expenses. The sidebar below shows a 1998 income statement for the SWP.

1998 Income Statement for the State Water Project	
Revenues	Thousands of Dollars
Water contractor payments	620,817
Revenue bond cover adjustments	(38,303)
Rate management adjustments	(17,000)
Other revenue	18,947
Total operating revenues	584,461
Expenses	Thousands of Dollars
Project operations, maintenance, and power	331,395
Deposits to reserves	(14,700)
Water bond principal	77,279
Water bond interest	183,487
Total operating expenses and debt service	577,461
Net system revenues	7,000

Delta Resources and Environmental Issues

The 738,000-acre Delta is the heart of California's water environment. The Delta, at the convergence of the Sacramento and San Joaquin rivers, is a network of islands, sloughs, marshes, and reclaimed farmland that stretches from Sacramento to San Francisco Bay. A source of drinking water for about two-thirds of California's population, the Delta also provides irrigation for the Central Valley, which produces 55 percent of the country's fruits and vegetables.

Human activities, such as land development, water use, wastewater discharges, introduced species, and harvesting, have caused water quality and environmental problems in the Delta, as evidenced by population declines in many of its biological species.

The State Water Resources Control Board has adopted water quality control plans and policies to protect the Delta's water quality and environment and to control its water resources.

Water Quality Control Plan for the Delta

On December 15, 1994, federal and State officials and key stakeholder groups agreed on a protection plan for the Bay-Delta Estuary, entitled the Principles for Agreement. At the same time, the SWRCB issued a draft Water Quality Control Plan that was consistent with the Principles for Agreement.

On February 28, 1995, USBR and the Department filed a petition with SWRCB to change their water rights to conform to the Principles for Agreement and the draft WQCP. Their petition asked that USBR and the Department be allowed to divert or redivert water from each others' points of diversion in the southern Delta.

After revising its draft Plan in response to public comments, SWRCB adopted the *Water Quality Control Plan for the San Francisco Bay/Sacramento-San Joaquin Delta Estuary* on May 22, 1995.

On June 8, 1995, SWRCB adopted Interim Water Right Order 95-6. This order temporarily conformed the terms and conditions of USBR and departmental water rights to reflect the 1995 Bay-Delta Plan and provided for joint points of diversion under certain restricted circumstances.

WR 95-6 was set to expire whenever a comprehensive water right decision allocating responsibilities to meet the 1995 Bay-Delta objectives was adopted or on December 31, 1998, whichever came first. The environmental analysis supporting WR 95-6 was based on Decision 1485. D-1485, adopted by SWRCB in 1978, set forth conditions, including water quality standards, export limitations, and minimum flow rates, for SWP and CVP operations in the Delta.

The Department and USBR both agreed to meet the standards in WR 95-6 until SWRCB adopted a new comprehensive water right decision and to operate the SWP and CVP in accordance with the Principles for Agreement.

Issues addressed in WR 95-6 included striped bass, Suisun Marsh, export limits, and Delta Cross Channel gate operations. WR 95-6 also temporarily changed the Vernalis salinity standard to match the corresponding salinity objective in the 1995 Bay-Delta Plan.

SWRCB began public hearings March 9, 1998, to consider ways to implement the 1995 Bay-Delta Plan. A revised Notice of Public Hearing was issued May 6, 1998. The revised notice divided the hearing into two phases. Phase I covered the issue of whether the order should be extended and, if so, for how long and under what terms. On July 1, 2, and 14, 1998, SWRCB conducted Phase I of the hearing and received evidence.

By December, it was evident that no comprehensive water right decision would be adopted by SWRCB before December 31, 1998, and that WR 95-6 would expire on December 31, 1998. To prevent this, SWRCB adopted Interim Water Right Order 98-9, extending WR 95-6 on December 3, 1998. WR 98-9 stated that WR 95-6 will expire upon adoption of a comprehensive water right

decision allocating responsibility for meeting 1995 Bay-Delta objectives or on December 31, 1999, whichever comes first. WR 98-9 effectively extended the expiration date of WR 95-6 for 1 year.

CALFED

The CALFED Bay-Delta Program is a cooperative effort among State and federal agencies and California's environmental, urban, and agricultural communities. CALFED was initiated in 1995 to address environmental and water management problems associated with the Bay-Delta system, the intricate web of waterways created at the junction of the San Francisco Bay and the San Joaquin rivers and the watershed that feeds them.

In May 1995, the CALFED Program began to develop a long-term plan to fix the San Francisco Bay/Sacramento-San Joaquin Delta. In cooperation with environmental, urban, and agricultural interests, CALFED developed three potential alternative solutions that were released in a draft programmatic EIS/EIR in March 1998. Several thousand comments on the three proposed alternatives were received through a 105-day public comment period. These comments, and additional extensive technical analyses, were used to develop the Revised CALFED Phase II Report.

On December 18, 1998, the Revised CALFED Phase II Report was released. The document provided a framework for restoring ecological health to the Bay-Delta Estuary, providing a more reliable water supply for all uses, and improving water quality in California.

The framework sought to achieve continuous improvements in four interrelated problem areas: ecosystem health, water quality, levee system integrity, and water supply reliability.

The actions were grouped under eight program elements:

- long-term levee protection;
- water quality;
- ecosystem restoration, including an environmental water account;

- water use efficiency;
- water transfers;
- watershed management;
- water storage; and
- water conveyance.

Further approval of the plan is expected in 1999, with implementation scheduled to begin in 2000.

Status of Threatened or Endangered Listings

Steelhead. In 1998, the National Marine Fisheries Service listed steelhead as threatened under the Federal Endangered Species Act.

Chinook Salmon. NMFS adopted late-fall, spring, and fall-run chinook salmon as candidate species for listing as threatened or endangered under FESA.

The California Fish and Game Commission listed the spring-run chinook salmon as threatened under the California Endangered Species Act.

Splittail. U.S. Fish and Wildlife Service deferred its decision to list the Sacramento splittail as a threatened species under FESA.

Sacramento splittail is a large minnow native to the Sacramento-San Joaquin Estuary. In 1994, USFWS proposed listing the fish as threatened under FESA, based on concerns about reduced abundance and distribution. Much of the data supporting this proposed listing was based on data collected during the 1987-92 drought and 1993-94 near-drought conditions. The original public comment period for the proposed listing closed on February 24, 1995, and USFWS was expected to make a final decision on the proposed splittail ruling by April 1998.

In June 1998, based on a request from the Department, USFWS reopened the comment period for the proposed listing of Sacramento splittail. Departmental staff prepared a report with recent data demonstrating that the splittail population was more resilient than previously thought. Biologists from the Department, the Department of Fish and

Game, and the Environmental Protection Agency authored a 1997 paper in the *Transactions of the American Fisheries Society*, which showed that wet conditions resulted in record or near-record number of splittail in 1995. Preliminary data from the Interagency Ecological Program suggested that the 1998 splittail year class was equally strong. Also, the population distribution was much wider and less susceptible to diversion effects than indicated in the original 1994 listing proposal. These and other comments were submitted to USFWS by July 17, 1998.

As of December 31, 1998, USFWS had not made a decision on the proposed listing.

Mitten Crabs

An introduced species, the Chinese mitten crab created problems for the fish salvage operation of the SWP and CVP in 1998. A crustacean with puffy brown claw coverings that resemble mittens, the crab is native to China. Commercial shrimp trawlers first detected the crab in South San Francisco Bay in 1992. The mitten crab now ranges throughout the Bay-Delta and its local tributaries, north up the Sacramento River to Colusa and south up the San Joaquin River to Highway 165 near the San Luis National Wildlife Refuge.

Each fall, mitten crabs migrate from fresh to salt water to spawn, bringing them near the federal Tracy Pumping Plant and State's Banks Pumping Plant in the south Delta. In 1996, the federal fish salvage facility at Tracy and the SWP's Skinner Fish Salvage Facility counted about 30 crabs. By fall 1997, 20,000 crabs appeared in the two facilities. In early fall 1998, 25,000 crabs invaded the Tracy facility daily, while the Skinner facility averaged around 100 crabs a day. By early October 1998, the estimated number of crabs entering the federal facility each day dropped to about 10,000, while the number entering the State facility each day had increased to about 10,000.

The sheer number of crabs in September and October severely impacted fish salvage operation at the SWP and CVP by clogging the systems, especially the fish holding tanks. Usually the fish are filtered out and transported for release in the Delta away

from the pumps. With thousands of crabs clinging to the bins, the process was delayed while workers tried to separate the fish from the crabs. Departmental staff are analyzing the situation and are working to develop a method to deter the crabs in 1999.

Community Service

In addition to water supply, the Department provided education and outreach, recreation opportunities on the SWP, and local assistance to users of the SWP. In June 1998, the Department staged and videotaped a SWP history seminar featuring presentations by past directors and other experts on the planning and construction of the SWP. The Department also managed several programs—including the Water Use Efficiency Program, Agricultural Drainage Program, and Environmental Impact Document Review—that benefited local agencies and the 29 long-term water contractors.

Departmental Changes in 1998

David Kennedy Retirement

David Kennedy, who retired in 1998, served as Director of the Department of Water Resources from 1983 through 1998, a period that spanned the administration of two governors.

Under his direction, the Department dealt with drought, floods, and increasing environmental demands while at the same time expanding the SWP and implementing the Monterey Agreement, which gave SWP long-term water contractors more flexibility to conserve and use water. Kennedy implemented a drought water bank, helped develop landmark water transfer formulas, improved the Department's ability to respond to floods, and facilitated the 1994 Delta Accord, which provided a framework for long-term solutions to Delta water quality and supply.

Kennedy was elected to the National Academy of Engineering in 1998. The distinguished National Academy honors engineers who have made "important contributions to engineering theory and practice."

Chapter 1
The State Water Project

View of spillway at
Antelope Dam looking from downstream

California's diverse geography contains both the highest and lowest elevations in the coterminous United States, with a resulting diversity of climate that ranges from desert to alpine to subtropical. In a typical year, some areas receive as little as 2 inches of rain, while others receive more than 100. This diversity of geography and climate creates an intricate and constantly changing pattern of water supplies, in turn creating enormous challenges in managing this vital resource.

Like present-day Californians, the earliest settlers faced the problem of how best to conserve, control, and deliver water. Remains of aqueducts, canals, and dams are still found near some of California's original missions. The first recorded aqueduct was 6 miles long; it was built in 1770 to serve the San Diego mission. In the early twentieth century, several cities—San Francisco and Los Angeles among them—built aqueducts to convey water from the Sierra Nevada to other parts of the State.

In 1951, after many years of discussion and study, the Legislature authorized construction of a water storage and supply system to capture and store runoff in Northern California and deliver it to areas of need throughout the State. Eight years later, the Legislature passed the Burns-Porter Act, which provided the mechanism for obtaining funds necessary to construct the initial facilities. In 1960, California voters approved an issue of \$1.75 billion in general obligation bonds, as authorized in the act, thereby obtaining funds to build the State Water Project. In 1962, the first water was delivered through a portion of the South Bay Aqueduct to two long-term contracting agencies in Alameda County.

Today the SWP, managed by the Department of Water Resources, is the largest state-built, multi-purpose water project in the country. The SWP was designed and built to deliver water, control floods, generate power, provide recreational opportunities, and enhance habitats for fish and wildlife. About

20 million of California's estimated 33 million residents benefit from SWP water. SWP water irrigates about 600,000 acres of farmland, mainly in the south San Joaquin Valley.

Precipitation and Runoff

The water stored and delivered by the SWP originates from rainfall and snowmelt runoff in Northern and Central California's watersheds, where most of the State's precipitation occurs.

Since 1968, the Department has monitored and recorded annual precipitation and runoff, since precipitation, snowpack, and the rate and amount of snowmelt help determine how much water the SWP can deliver in any given year. The water year as designated by the Department runs from October 1 through September 30.

Water Delivery Facilities

The SWP depends on a complex system of dams, reservoirs, powerplants, pumping plants, canals, and aqueducts to deliver water. Although initial transportation facilities were essentially completed in 1973, other facilities have since been built, and still others are either under construction or are planned to be built as needed (Figure 1-1). The SWP facilities include 28 dams and reservoirs, 26 pumping and generating plants, and approximately 660 miles of aqueducts.

**Figure 1-1
Names and Locations of Primary Water Delivery Facilities
Current and Projected, December 31, 1998**

Existing long-term SWP water supply contracts call for the annual delivery of 4,103,651 acre-feet of entitlement water by 1997 through SWP facilities, gradually increasing to a maximum of 4,172,786 acre-feet by 2020. However, because of changes that have occurred since the long-term water contracts were signed in the 1960s, actual demand has not developed as projected. These changes include population growth variations, differences in local use, local water conservation programs, and conjunctive-use programs. To date, the most SWP entitlement water delivered in any year was about 2.8 million acre-feet in 1989. Nevertheless, demands for SWP water are expected to increase as the population of California continues to increase.

Project Design

Water from rainfall and snowmelt runoff is stored in SWP conservation facilities and delivered via SWP transportation facilities to water agencies and districts in Southern California, Central Coastal, San Joaquin Valley, South Bay, North Bay, and Upper Feather River areas.

Three small reservoirs—Lake Davis, Frenchman Lake, and Antelope Lake—are the northernmost SWP facilities. Situated on Feather River tributaries in Plumas County, these lakes are used primarily for recreation; they also provide water to the City of Portola and local agencies that have water rights agreements with the Department.

Downstream from these three lakes is Lake Oroville, the keystone of the SWP. Lake Oroville conserves water from the Feather River watershed. Created by Oroville Dam, the tallest earthfill dam in the Western Hemisphere, Lake Oroville is the project's largest storage facility, with a capacity of about 3.5 million acre-feet. An acre-foot is about 326,000 gallons.

Releases from Lake Oroville flow down the Feather River into the Sacramento River, which drains the northern portion of California's great Central Valley. The Sacramento River flows into the Sacramento-San Joaquin Delta—738,000 acres of land interlaced with channels that receive runoff

from 40 percent of the State's land area. The SWP, along with the federal Central Valley Project and local agencies, diverts water from the Delta.

From the northern Delta, Barker Slough Pumping Plant diverts water for delivery to Napa and Solano counties through the North Bay Aqueduct, completed in 1988. Near Byron, in the southern Delta, the SWP diverts water into Clifton Court Forebay for delivery south of the Delta. The Banks Pumping Plant lifts water from Clifton Court Forebay into Bethany Reservoir; from Bethany Reservoir, the South Bay Pumping Plant lifts water into the South Bay Aqueduct to supply Alameda and Santa Clara counties. The South Bay Aqueduct provided initial deliveries in 1962 and has been fully operational since 1965.

Most of the water delivered to Bethany Reservoir from Banks Pumping Plant flows into the California Aqueduct. This 444-mile-long main aqueduct conveys water to the primarily agricultural lands of the San Joaquin Valley and the mainly urban regions of Southern California.

The California Aqueduct winds along the west side of the San Joaquin Valley. It transports water to O'Neill Forebay, Gianelli Pumping-Generating Plant, and San Luis Reservoir. San Luis Reservoir has a storage capacity of more than 2 million acre-feet and is jointly owned by the Department and the U.S. Bureau of Reclamation, which operates the CVP. The Department's share of gross storage in the reservoir is about 1,062,000 acre-feet. Generally, water is pumped into San Luis Reservoir during late fall through early spring months of the year and is temporarily stored for release back to the California Aqueduct to meet summertime peaking demands by SWP and CVP contractors.

SWP water not stored in San Luis Reservoir, and water eventually released from San Luis, continues to flow south through the San Luis Canal, which is a portion of the California Aqueduct jointly owned by the Department and USBR.

As the water flows through the San Joaquin Valley, numerous turnouts convey the water to farmlands within the service areas of the SWP and CVP.

Along its journey, the water is lifted more than 1,000 feet by four pumping plants—Dos Amigos, Buena Vista, Teerink, and Chrisman—before reaching the foot of the Tehachapi Mountains.

In the San Joaquin Valley near Kettleman City, Phase I of the Coastal Branch Aqueduct serves agricultural areas west of the California Aqueduct. This branch was extended in Phase II to serve municipal and industrial water users in San Luis Obispo and Santa Barbara counties beginning in August 1997.

The remaining water conveyed by the California Aqueduct is delivered to Southern California, where about two-thirds of California's population live. Before that water can be delivered, it must first cross the Tehachapi Mountains. Pumps at Edmonston Pumping Plant, situated at the foot of the mountains, raise the water 1,926 feet—the highest single lift of any pumping plant in the world. Then the water enters 8.5 miles of tunnels and siphons as it flows into Antelope Valley, where the California Aqueduct divides into two branches: the East Branch and the West Branch.

The East Branch carries water through Antelope Valley into Silverwood Lake in the San Bernardino Mountains. From Silverwood Lake, the water flows through the San Bernardino Tunnel into Devil Canyon Powerplant. The water continues down the East Branch to Lake Perris, the southernmost SWP reservoir.

The East Branch Extension, Phases I and II, will carry water from Devil Canyon Powerplant Afterbay to Cherry Valley, bringing water to Yucaipa, Calimesa, Beaumont, Banning, and other communities. The completed East Branch Extension will be a nearly 33-mile pipeline linking parts of San Bernardino Valley Municipal Water District service area and the eastern part of San Geronio Pass Water Agency service area to the California Aqueduct. Phase I is planned for completion in 2001; Phase II will be completed 10 to 15 years after Phase I.

Water in the West Branch flows through Warner Powerplant into Pyramid Lake in Los Angeles

County. From there it flows through the Angeles Tunnel and Castaic Powerplant into Elderberry Forebay and Castaic Lake, terminus of the West Branch. Castaic Powerplant is operated by the Los Angeles Department of Water and Power.

The energy needed to operate the SWP, the single largest user of electrical power in California, comes from a combination of its own hydroelectric and coal-fired generation plants and power purchased from other utilities. The project's eight hydroelectric powerplants, which include three pumping-generating plants, and one coal-fired plant produce enough electricity in a normal year to supply about two-thirds of the necessary power.

Tables 1-1 through 1-5 present statistical information about primary reservoirs, primary dams, pumping plants, powerplants, and aqueducts. Additional information regarding operation of the plants under full development can be found in Chapter 10.

Additional Construction

SWP aqueduct facilities were initially designed and constructed to provide service to all agencies to meet their water delivery needs up to 1990. Project water-conservation reservoirs were planned to be constructed in stages as water demands increased. Oroville and San Luis were the first SWP conservation reservoir facilities constructed. Additional SWP facilities were scheduled to meet increased demands. It was anticipated that population growth in delivery service areas and water supply areas of origin would influence the final schedule for the additional SWP facilities. However, increased costs, environmental issues, and increased non-SWP demands for limited water supplies delayed the construction schedule for some planned additional facilities.

In response to changes in water management policy, the Department continues to reassess plans for the additional facilities that will incorporate increased environmental safeguards while also increasing the SWP delivery yield. Developing those plans involves the time-consuming process of finding technically suitable projects and satisfying the many complex and dynamic environmental procedures, laws, and regulations.

In the mid-1980s, the Department began planning an offstream storage complex, Los Banos Grandes, in Merced County. Initial planning for Los Banos Grandes was completed. However, because of environmental concerns, additional planning for Los Banos Grandes has been suspended until those concerns have been addressed. The Department also developed alternative methods of storing water, including the Kern Water Bank, a conjunctive-use groundwater storage facility located in Kern County.

The signing of the Monterey Agreement in December 1994 set the principles for permanently transferring the State-owned Kern Fan Element of the Kern Water Bank from the Department to two agricultural contractors, Kern County Water Agency and Dudley Ridge Water District. The transfer occurred August 9, 1996.

The Department continues to plan, design, and construct transportation and power-producing facilities for the SWP. Mojave Siphon Powerplant was completed in 1996. The enlarged Devil Canyon Powerplant and the new Devil Canyon Powerplant Second Afterbay became operational in 1995. In addition, the second phase of the Coastal Branch of the California Aqueduct began operation in August 1997. The Coastal Branch can transport about 50,000 acre-feet of water annually to San Luis Obispo and Santa Barbara counties.

Methods of Financing

Project facilities have been constructed with four general types of financing: general obligation bonds and tideland oil revenues (under the Burns-Porter Act, which was approved by the Legislature in 1959, and the bond issue approved by voters in 1960); revenue bonds; and capital resources revenues. Repayment of these funds and the operations, maintenance, power, and replacement costs associated with water supply are paid by the 29 agencies and districts that have long-term contracts with the Department for SWP water; those costs are repaid as they are incurred.

The contracts initially provided for a combined maximum annual entitlement of 4,230,000 acre-feet of water supply. As a result of contract amendments in the 1980s and the Monterey Amendment, the current combined maximum annual entitlement totals 4,172,786 acre-feet. The contracts are in effect for the longest of the following periods:

- the project repayment period, which extends to the year 2035;
- 75 years from the date of the contract; or
- the period ending with the latest maturity date of any bond used to finance the construction costs of project facilities.

Long-Term Contracting Agencies

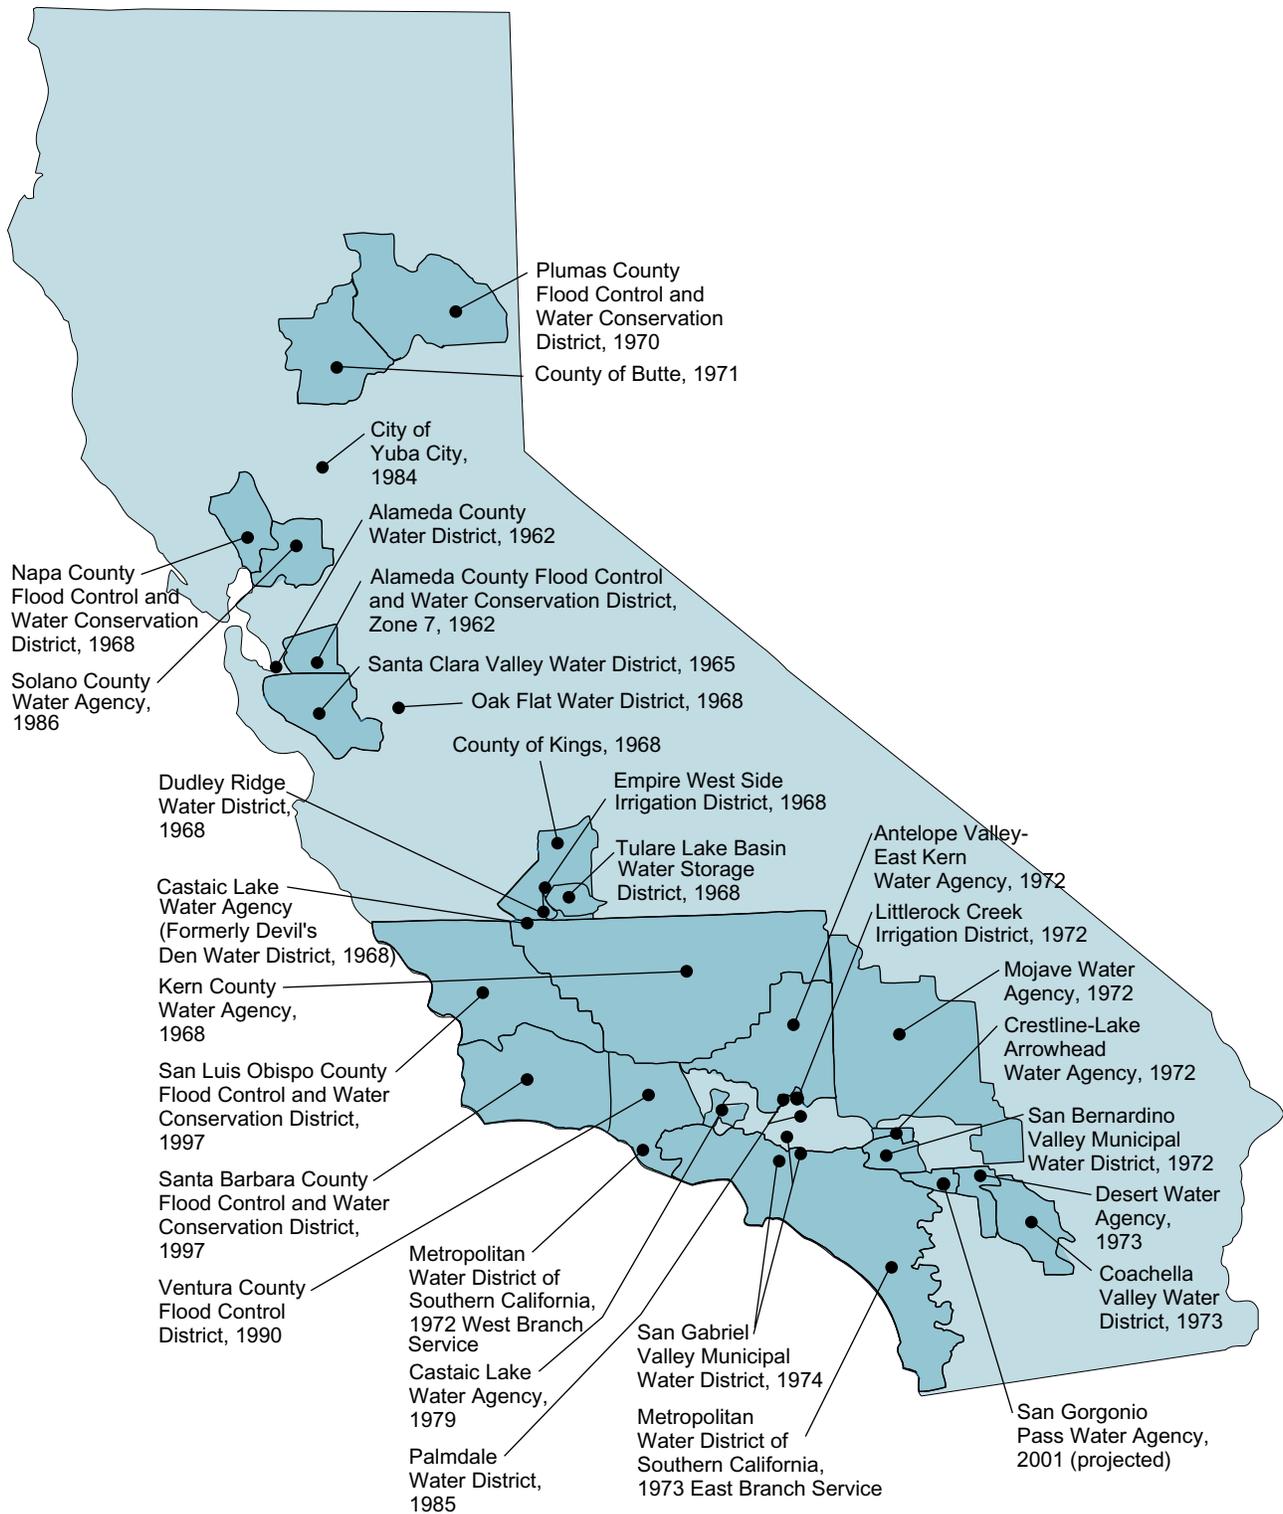

From 1963 through 1967, 32 agencies or districts signed long-term water supply contracts with the Department. However, in 1965, the City of West Covina was annexed to the Metropolitan Water District of Southern California, and in 1981

Hacienda Water District was assigned to Tulare Lake Basin Water Storage District. On January 1, 1992, Castaic Lake Water Agency assumed all rights and obligations granted to Devil's Den Water District according to its long-term supply contract. The 29 agencies and districts that now have long-term contracts with the Department as of

December 31, 1998, are listed in Figure 1-2 and Table 1-6.

Figure 1-2 shows the name and location of each contracting agency and district and lists the first year of SWP delivery service for each. Table 1-6 presents information about each contracting agency.

^a All water delivered to long-term SWP contractors, including carryover entitlement, interruptible entitlement, surplus, unscheduled, exchange, permit, purchased, local, and non-SWP water.

^b Statutes of 1978, Chapter 1207, added Section 135 to the Revenue and Taxation Code, requiring assessment at 100 percent of full value for the 1981-1982 fiscal year and fiscal years thereafter.

^c Total of all Plumas County Flood Control and Water Conservation District, including Last Chance Creek Water District.

^d Assessed valuation not available on an agency area breakdown.

^e District includes land in the San Joaquin Valley Area formerly known as Devil's Den Water District.

^f Total for MWD, including Calleguas Municipal Water District, which is common to MWD and Ventura County Flood Control District.

^g Includes duplicate values. Some areas that are within two or more agencies are included in each agency's total.

Chapter 2

Delta Resources

Steamboat Slough with
Mount Diablo in the background

Significant Events

Developing Habitats

- The Delta Flood Protection Program continues to make significant strides to create valuable habitat in the Delta. The program is in the process of developing 282.7 acres of various habitat types for mitigation and 19.38 acres for enhancement.

The program is also developing 36,350 lineal feet of shaded riverine aquatic habitat, of which 12,898 lineal feet will be used for mitigation of program levee work and 23,452 lineal feet for enhancement of Delta levee habitat.

Over the past 40 years many programs were developed and implemented by federal and State agencies, including the Department of Water Resources, to manage the Sacramento-San Joaquin Delta as both a unique environmental resource and as one of California's major water supply sources.

The common goals of these programs have been to:

- improve water supply reliability to the State Water Project, Central Valley Project, and Delta water users;
- determine levels of flow and salinity necessary to protect fish and wildlife habitat; and
- devise methods to control flooding, protect fish and wildlife, and provide recreational activities.

Delta Water Management Programs

Over the last decade or so, the Department's planning programs focused on solving water management problems in three distinct areas of the Sacramento-San Joaquin Delta: the north Delta, west Delta, and south Delta (Figure 2-1). In 1992, the Governor announced a new water policy to "fix the Delta." Solutions to improve conditions in the Delta would address fish and wildlife needs, efficiency and reliability of water export systems, water quality needs, and the physical integrity of Delta channels and levees. Meanwhile, long-term Delta solutions would be deferred to a separate process and would include public involvement from all interest groups. As part of the policy to "fix the Delta," short term actions would be taken in the south Delta.

In June 1994, a Framework Agreement between the federal and State governments defined a cooperative process for developing a long-term solution to the water supply, water quality, and ecosystem problems of the Delta. The CALFED Bay-Delta Program, a component of the process, is conducting the required technical analyses and developing programmatic level environmental documentation for the long-term solution. The program includes extensive public outreach and input.

Interim South Delta Program

The Interim South Delta Program requires accelerated construction of south Delta facilities to improve Delta water conditions while the Bay-Delta Program's long-term solution is developed and implemented. In combination with other actions, this program is being considered for implementation during the next 5 to 7 years as part of the CALFED preferred alternative for the Delta. The ISDP is designed to improve water levels and circulation in south Delta channels for local agricultural diversions. The program will also improve south Delta hydraulic conditions to increase diversions into Clifton Court Forebay and maximize the frequency of full pumping at Banks Pumping Plant. Other potential components, such as fish screening facilities, are being considered as part of ISDP through the CALFED process.

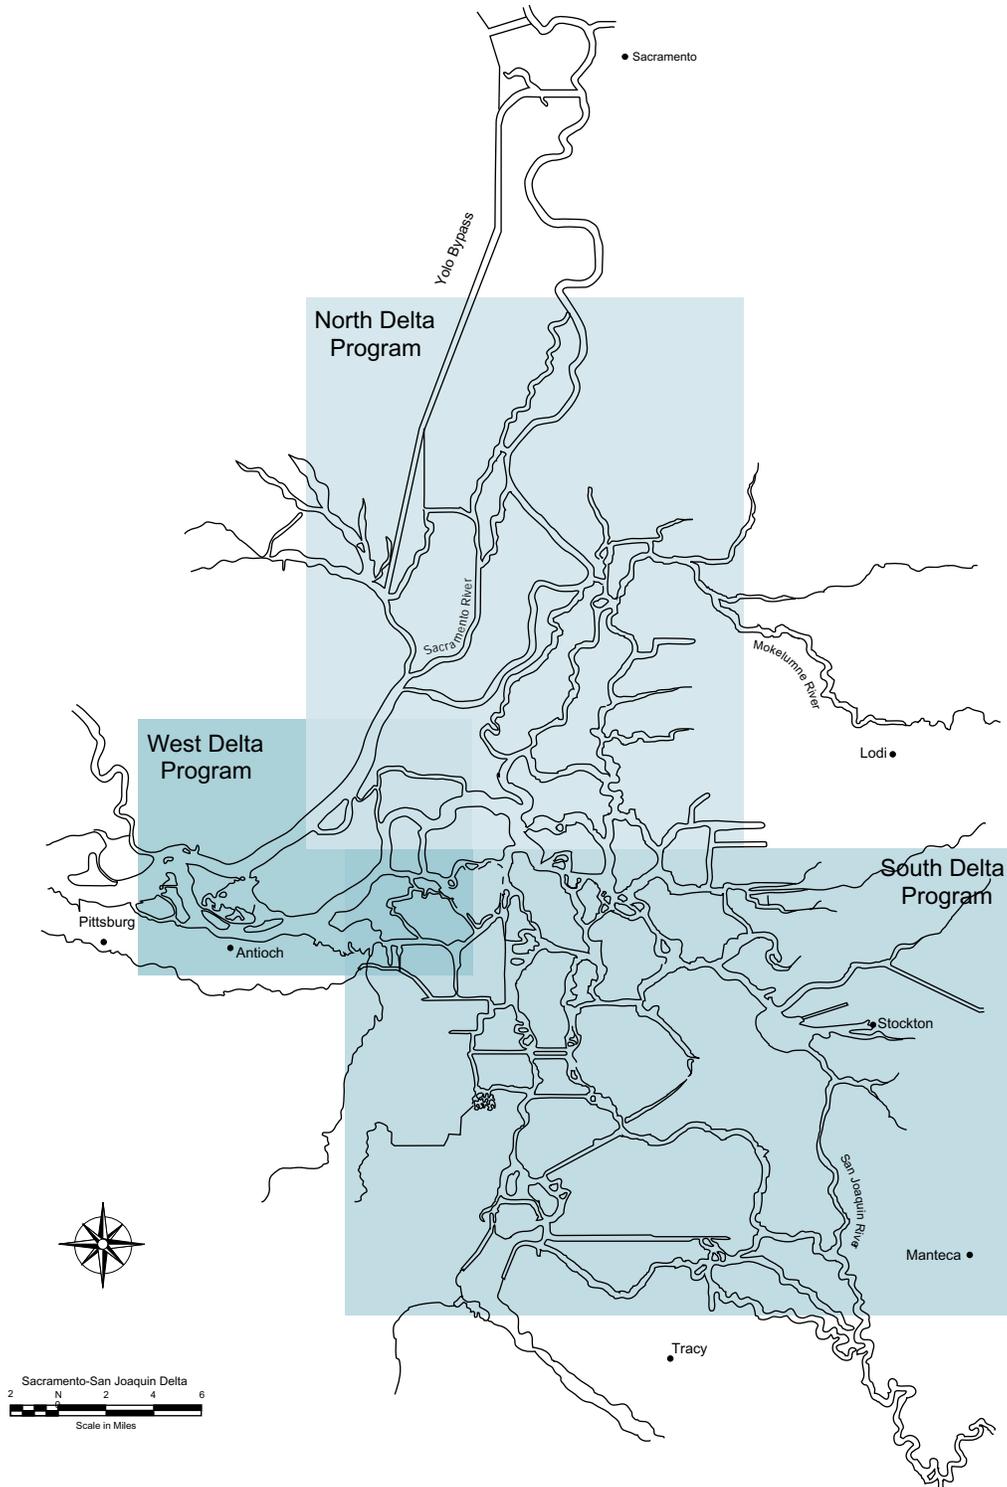

Preferred Alternative

The current preferred alternative consists of:

- three flow-control structures to improve local water levels and circulation in south Delta channels;
- a fish-control structure to improve fish migration in the San Joaquin River;
- approximately 5 miles of dredging in existing south Delta channels to improve conveyance and circulation;
- an additional intake to Clifton Court Forebay north of the existing intake; and
- to increase diversions into Clifton Court Forebay.

Increasing diversions into Clifton Court Forebay, subject to receiving a U.S. Army Corps of Engineers permit, would allow Banks Pumping Plant to pump up to its maximum design capacity of 10,300 cubic

Figure 2-1
Boundaries of North, West, and South Delta Water Management Programs

feet per second with fewer restrictions. It would also improve the reliability of SWP water supply and increase operational flexibility. In addition, the proposal to construct flow-control structures in south Delta channels would allow the Department and U.S. Bureau of Reclamation to meet the obligations of a pending agreement with South Delta Water Agency to improve conditions for local agricultural diversions. The fish-control structure would benefit both spring and fall salmon migrations in the San Joaquin River.

Environmental Review Process

A draft environmental impact report/environmental impact statement for the ISDP was released in August 1996; a final EIR/EIS is tentatively scheduled for release in late 2000. Other potential components of ISDP are under consideration as part of the CALFED Bay-Delta Program staged approach to a long-term Delta solution. Once the final EIR/EIS is completed, a notice of determination and record of decision will be filed. State and federal regulatory agencies may then act on permits required to construct and operate the proposed facilities.

The necessary permits would be issued by the Corps according to both Section 404 of the Federal Water Pollution Control Act (Clean Water Act) for dredging operations and Section 10 of the Rivers and Harbors Act for Navigation. Approval for the permits must be coordinated with the U.S. Fish and Wildlife Service, National Marine Fisheries Service, the Environmental Protection Agency, and the California Department of Fish and Game.

Temporary Barriers Project

The Department has installed and operated temporary barrier facilities in the south Delta since 1990 to improve south Delta conditions and collect data to design and operate permanent barrier facilities, as proposed in the ISDP. Data collected in the Temporary Barriers Program has assessed the ability of south Delta barriers to reduce or eliminate adverse water levels and improve local hydraulic circulation patterns.

In addition, biological monitoring programs were conducted to:

- determine potential effects of barriers on Delta fish and vegetation;
- evaluate and review computer model calibration; and
- develop comprehensive environmental information for the design and operation of permanent barrier facilities.

Clean Water Act

Section 404 of the Federal Water Pollution Control Act (Title 33, United States Code Section 1344 [1977]), also known as the Clean Water Act, requires that a permit be obtained from the U.S. Army Corps of Engineers for any activity that results in discharge of dredged material or placement of fill material in the waters of the United States. Section 404 has been broadly interpreted by the federal courts to include structures or fills introduced into waters within a state that may be used for interstate or foreign commerce. Section 402 of the Clean Water Act established a permit system known as the National Pollutant Discharge Elimination System to regulate point sources of discharges in navigable waters of the United States.

The Porter-Cologne Water Quality Control Act is California's comprehensive water quality control law and is a complete regulatory program designed to protect water quality and beneficial uses of the State's water. In 1972, the Porter-Cologne Act was amended to give California the authority and ability to operate the NPDES permits program. These laws require regional water quality plans to be adopted and implemented by issuing waste discharge requirements to each discharger of waste that could impact the waters of the State.

Temporary rock barriers are being tested at four sites:

- Old River at head, in Old River where it splits from the San Joaquin River;
- Old River near Tracy, in Old River one-half mile east of the Tracy Pumping Plant intake and about 8 miles northwest of the city of Tracy;
- Middle River, just south of the confluence of Middle River, Trapper Slough, and North Canal; and
- Grant Line Canal, 420 feet east of the Tracy Boulevard Bridge.

The barrier at the head of Old River prevents San Joaquin River flow from entering Old River and flowing toward export facilities. The additional flow

in the San Joaquin River helps guide San Joaquin salmon to the ocean in the spring and improves dissolved oxygen levels for upstream salmon migration in the fall. The other barriers have culverts with flap gates that improve water levels and circulation in south Delta channels during the irrigation season.

Since 1963 the Old River at Head barrier has been installed in the fall and intermittently, since 1992, in the spring. High San Joaquin River flows sometimes prevent the Old River at Head barriers from being installed. The Old River barrier near Tracy has also been seasonally installed since 1991, as has the Middle River barrier since 1987 and the Grant Line Canal barrier since 1996.

Interim North Delta Program

In fall 1995, the Department suspended Interim North Delta Program planning activities in deference to the ongoing efforts of the CALFED Bay-Delta Program. The original objectives of the INDP were to:

- alleviate flooding in the north Delta;
- reduce reverse flow in the lower San Joaquin River;
- improve water quality;
- reduce project impacts on fisheries; and
- increase flexibility of the SWP for water transfers and improve reliability of its water supply.

The CALFED Bay-Delta Program addresses the issues identified in the INDP in a comprehensive manner, with input from involved stakeholders, regulatory agencies, and cooperating agencies. The Department provides logistical and technical support to help assure that solutions are technically and economically sound, and that the large body of information developed as part of the INDP is fully integrated into the CALFED process.

West Delta Program

The objectives of the West Delta Program are to:

- effectively manage SWP-owned lands on Sherman and Twitchell islands (approximately 12,000 acres total);
- improve the integrity of local levees;

- implement land-use management to control subsidence and soil erosion on Sherman and Twitchell islands;
- implement mitigation requirements associated with the Temporary Barriers Program and proposed ISDP; and
- provide diverse habitat for wildlife and waterfowl.

The Department contracted with a consultant to develop preliminary wildlife management plans for the two islands. The plans are designed to benefit species of wildlife that occupy wetland, upland, and riparian habitats and to provide recreational opportunities for hunting and viewing. In addition, property acquired and potential habitat developed by the Department could mitigate impacts associated with current and future Delta water management programs, including those being proposed by the Department and the CALFED Bay-Delta Program.

The Department is a major landowner on both Twitchell and Sherman islands and holds two out of the three trustees' positions for Reclamation District 1601 (Twitchell Island) and Reclamation District 341 (Sherman Island). This allows the Department to control the management and operation of each district with the goal of improving conditions and accountability. The reclamation districts provide levee maintenance, island drainage, and some internal water supply. The districts also assess the landowners for the operational needs of the public districts.

Delta Flood Control Program

The Sacramento-San Joaquin Delta is one of California's most valuable and irreplaceable resources. Without adequate levee protection, the Delta, as we know it today, would be lost. The levees serve many needs. They protect valuable wildlife habitat, farms, homes, urban areas, recreational developments, highways and railroads, natural gas fields, utility lines, major aqueducts, and other public developments. The levees are critical to the protection of Delta water quality and serve a significant function in the State's water transfer system. The State Legislature, recognizing the importance of the Delta following the floods of the early 1980s, enacted the Delta Flood Protection Act of 1988, (SB 34 [Water Code Sections 12310 *et seq.*, and 12980 *et seq.*]). With SB 34, the

Legislature declared that, "...the Delta is endowed with many invaluable and unique resources and that these resources are of major statewide significance."

In SB 34, the Legislature declared its intent to appropriate \$12 million annually through fiscal year 1998-99 for the Delta Flood Protection Fund. Six million dollars of the appropriation are for local assistance under the Delta Levee Maintenance Subventions Program. The remaining \$6 million are for Special Delta Flood Control Projects, including subsidence studies and monitoring on Bethel, Bradford, Holland, Hotchkiss, Jersey, Sherman, Twitchell and Webb islands, and the towns of Thornton and Walnut Grove. Currently, the program has received more than \$86 million in appropriated funds and, combined with local funds, has realized \$115 million in levee improvements. In 1996, AB 360 was signed into law. This law expanded the area covered by the Special Projects Program to include the remainder of the legal Delta and Suisun Marsh. Delta Flood Control Program staff at the Central District is developing a prioritization process for distributing funds under AB 360. Available funds for the program run out on June 30, 2000, and no new funding has been made available.

Delta Levee Maintenance Subventions Program

The Subventions Program provides funding, as a reimbursement, to local Delta reclamation districts to assist levee maintenance, repair, and rehabilitation in compliance with the State's Flood Hazard Mitigation Plan objectives. Each year, districts wanting to participate in the program prepare work plans and file

applications with the State Reclamation Board for funding.

After applications and work plans are reviewed, the Department requests the approval of SRB. SRB is also requested to approve each district's maximum possible reimbursement (up to 75 percent for levee work and habitat mitigation) and maximum advanced reimbursement amount based on program reimbursement priorities and available funding.

Upon SRB approval, agreements are executed between SRB and each participating district, which state that eligible work will be completed during the fiscal year. All work must be in compliance with appropriate State and federal laws, including the California Environmental Quality Act, the State and federal Endangered Species Acts, Section 1600 of the Fish and Game Code, Section 404 of the Clean Water Act, and approval by DFG that a net long-term habitat improvement of riparian, fisheries, and wildlife habitat will result.

Special Projects

The Special Flood Control Projects Program assists the eight western islands, other locations in the Delta and northern Suisun Bay, and the towns of Thornton and Walnut Grove. In July 1989, the Legislature approved a plan of action for flood control for the towns of Thornton and Walnut Grove.

For the eight western Delta islands, the California Water Commission approved a report of initial or "fast-track" actions in September 1989 and approved the long-term actions and priorities in May 1990.

Endangered Species Acts

In planning, constructing, and operating the SWP, the Department must consider the effects its actions will have on organisms, plants, birds, reptiles, fish, and mammals listed as threatened or endangered according to the Federal Endangered Species Act (Title 16, United States Code sections 1531-1544 [1973]) and the California Endangered Species Act (California Fish and Game Code sections 2050-2098 [1984]). An endangered species is one in danger of extinction in all or a significant portion of its range; a threatened species is one likely to become endangered. These acts are designed to protect threatened and endangered species by:

- ensuring federal and State agencies adopt measures to protect the species during the design, construction, and operation of projects and in taking other forms of agency action; and
- prohibiting the take of endangered species.

One important aspect of the acts is preserving habitat critical to the survival of the threatened or endangered species.

The long-term plans are used by the Department to determine how to best use appropriations to protect these islands and include: rehabilitating threatened levees through the use of imported dredged material; verifying elevations in the Delta through the use of Global Positioning System equipment; and upgrading levees to the standards included in Bulletin 192-82, *Delta Levees Investigation*. Depending on the ability-to-pay of each reclamation district, the Department pays up to 100 percent of the cost of these activities. Districts receiving funds under the Special Flood Control Projects Program are required to participate in habitat improvement programs to ensure a net long-term habitat improvement.

Delta Levees Habitat Improvement

The Delta Flood Protection Program continues to make significant strides in its efforts to create valuable habitat in the Delta. The program is in the process of developing 282.7 acres of various habitat types for mitigation and 19.38 acres for enhancement. The program is also in the process of developing 36,350 lineal feet of shaded riverine aquatic habitat, of which 12,898 lineal feet will be used for mitigation and 23,452 lineal feet for enhancement.

Mitigation projects include projects on Medford, Twitchell, Bethel, Kimball, and Staten islands, and Terminous, Palm, Wright-Elmwood, and Thornton-New Hope tracts. *Enhancement projects* include participation in the joint Department of Water Resources/U.S. Army Corps of Engineers Lower Sacramento River Revegetation Project, and projects on Decker, Tyler, Staten, Sherman, and Twitchell islands, and Webb, Veale, Franks, and McCormack-Williamson tracts. Projects that may, or will be used for both mitigation and enhancement, include projects on Prospect Island and Canal Ranch.

The Department, DFG, and reclamation districts are making substantial progress in providing adequate avoidance or mitigation of net long-term habitat losses and in enhancing habitat in the Delta. Many participating districts are identifying potential habitat mitigation and enhancement areas that may be developed into diverse habitats as the program's habitat development process moves forward. The Department and DFG will continue to work with the reclamation districts to improve the quantity and quality of habitat in the Delta.

Subsidence Investigations

Organic soils in the Sacramento-San Joaquin Delta are now between 10 and 25 feet below sea level. The peat has oxidized and subsided since the mid-1800s, when the land was first drained and levees constructed. The Legislature recognized the problem and, with the Delta Flood Protection Act, requested the Department to monitor subsidence and study its causes.

The Department and the U.S. Geological Survey conduct an ongoing subsidence investigation in the Delta. Preliminary data indicate that:

- land management practices substantially influence subsidence rates;
- cultivation practices that raise soil temperature and lower the water table dramatically increase oxidation of the peat soils;
- conversion of highly organic peat soils to carbon dioxide gas appears to be the primary cause of subsidence; and
- the presence of vegetation mats suggests that shallow permanent flooding will reverse subsidence through biomass accretion.

CALFED granted Category III funds to the Department to construct a Subsidence Reversal Demonstration Project on Twitchell Island. In 2001, USGS and area consultants will set up a learning laboratory to find ways to reverse subsidence. This project will combine the cultivation of tules and other aquatic vegetation in shallow ponds with diversion and settling of silt-laden water from the San Joaquin River. The soil build-up and organic soil oxidation rates will be measured.

Reuse of Dredged Material for Delta Levees

As local sources of fill material for levee repair are depleted, new economical sources must be located. The Department, in coordination with the Corps, local reclamation districts, and the Central Valley Regional Water Quality Control Board, implemented three pilot projects—at Sherman, Twitchell, and Jersey islands—to demonstrate the viability of relocating material from the San Francisco Bay Area to the Delta. These pilot projects required extensive monitoring and testing programs and no adverse salinity impacts were found.

Based on these results, the Central District Flood Protection and Geographic Information Branch worked on increasing opportunities to reuse clean, bay-dredged materials in the Sacramento-San Joaquin Delta.

Current efforts for beneficial reuse of dredged material from the Bay Area principally consist of:

- coordination with the regional board to address water quality concerns;
- discussions with the Corps to promote identification and acquisition of federal funds to support beneficial reuse projects;
- providing assistance to the Long-Term Management Strategy and Save the Bay in preparing proposals to CALFED to evaluate the potential for Delta reuse of clean, dredged material from the bay;
- coordination with the Corps, Regional Board, CALFED, and RD 341 to stockpile dredged material from Suisun Bay and New York Slough on Sherman Island—this is a long-term project and could consist of 200,000 cubic yards of dredged material annually for 5 years; and
- levee restoration and habitat projects proposed or under construction. Projects include stability berms on Bradford Island to reinforce cracking and foundations; long-term levee improvements on Sherman Island, including stability berms to strengthen levees in critical areas; stability berms to strengthen historically weak levees along Three Mile Slough on Twitchell Island; construction of a 42-acre island for habitat restoration on Franks Tract; levee repair of areas with stability and seepage problems on Webb Tract; and construction of a 2.2-acre island in the San Joaquin River for the Sherman Island Berm Demonstration Project.

Levee Upgrades

The Department funds upgrades to the levees according to standards contained in Bulletin 192-82, *Delta Levees Investigation*. According to those standards, the agricultural levees must be raised to provide 1.5 feet of freeboard for a 300-year flood and widened to a 16-foot crown width, with a waterside slope ratio of at least 3 horizontal to 1 vertical.

In August 1991, the Corps, USBR, and the Department signed a feasibility cost-sharing agreement for a

special study of the Sacramento-San Joaquin Delta. Updating an earlier 1982 study, the 1991 special study provides for investigating solutions for Delta flood protection, salinity intrusion, recreation, and navigation. In accordance with the Water Resources Development Act of 1986 and the federal policy of incurring no net loss of habitat, the 1991 study includes environmental and wildlife habitat restoration measures. The study will also consider the Department's management plans for water supply and flood control when developing alternatives for a comprehensive Delta plan.

U.S. Army Corps of Engineers

In addition to its historical leadership in flood control, the U.S. Army Corps of Engineers regulates structures or work affecting navigable waters of the United States according to Section 10 of the Rivers and Harbors Act (Title 33, United States Code, Section 403 [1899]) and any activity which results in discharges of dredged or fill material into waters of the United States (which includes wetlands), according to Section 404 of the Clean Water Act.

U.S. Bureau of Reclamation

The U.S. Bureau of Reclamation manages the operation of the Central Valley Project and shares with the Department responsibilities for meeting water quality and flow objectives in the Delta. The CVP delivers about 7 million acre-feet of water a year to contractors in the Sacramento and San Joaquin valleys and parts of the San Francisco Bay Area. Under the requirements of the CVP Improvement Act, USBR also supplies water for fisheries and wildlife refuges in the Central Valley.

Because the Department and USBR share Delta responsibilities, the Department coordinates SWP operations with USBR according to terms and conditions of the Coordinated Operation Agreement, signed in 1986. That agreement replaced an earlier system of year-to-year agreements regarding the responsibilities of the Department and USBR in the Delta. The COA is significant in that the federal government agreed to accept a significant portion of responsibility for meeting the State Water Resources Control Board's water quality requirements for the Delta, with certain restrictions as to limitations of State and federal authorities.

The special study is divided into two phases. Phase I began in September 1991 and ended in March 1993. The Phase I report, called the *Initial Report*, describes problems, possible solutions, and

opportunities to improve and/or provide flood protection, fish and wildlife habitat, water quality, recreation, and navigation. The *Initial Report* included a plan that identified existing and future land uses in years 2000, 2020, and 2040. The report discussed developing a comprehensive plan, primarily for flood control, navigation, and environmental restoration.

In Phase II, a Regional Planning Report for environmental restoration, flood control, and navigation is being developed. The goal of this report is to develop a region-wide plan for Corps involvement in the Delta that links to the other planning efforts. The Regional Planning Report will incorporate and be closely coordinated with CALFED long-term policies and plans. Other Phase II efforts are to:

- design and construct a levee test section;
- study borrow material sources; and
- study dredged material reuse.

In addition, a planned joint program will investigate other reuse opportunities and technical studies of sediment traps, water-quality effects of sediment reuse, subsidence control, and habitat restoration. These investigations will demonstrate the value of sediment reuse and will continue to build momentum for developing solutions to Delta problems, particularly for flood-control issues.

Delta Water-Rights Management

Several agencies in the western Delta have rights to water in the Delta. To manage those water rights and resolve issues associated with them, the Department negotiated water-rights management contracts with some of the agencies concerned. Those agencies serve agricultural, municipal, and industrial users of Delta water.

Delta Agricultural Water Users

In 1974, the Delta Water Agency was replaced by six Delta agricultural water agencies—North Delta Water Agency, SDWA, Central Delta Water Agency, East Contra Costa Irrigation District, Contra Costa County Water Agency, and Byron-Bethany Irrigation District. Two of those agencies—NDWA and ECCID—signed water-rights management contracts with the Department in 1981. The Department also

negotiated contracts, or is requesting negotiations, with other agencies to provide for water level, circulation, and quality needs in certain areas.

South Delta Water Agency Contract

In September 1990, the Department completed negotiations for a long-term agreement with SDWA and USBR. Under the proposed SDWA contract, the parties agreed to proceed with the design, construction, and operation of certain barrier facilities in the channels of the south Delta. The facilities resolved those portions of the lawsuit that SDWA filed in 1982 regarding the alleged effects of export pumping by the SWP and/or the CVP on water levels, quality, and circulation in the south Delta.

Since 1990, the Department has installed and operated temporary barrier facilities in the south Delta to improve south Delta conditions and collect data needed to design and operate permanent barrier facilities as proposed in the ISDP. Data collected in the Temporary Barriers Program assessed the barriers' ability to reduce or eliminate adverse water levels and improve local hydraulic circulation patterns.

Western Delta Municipal Water Users

To compensate the Contra Costa Water District and the City of Antioch for purchasing water of usable quality when such water is not available from Mallard Slough and the San Joaquin River, respectively, the Department signed contracts with those agencies in 1967 (CCWD) and 1968 (City of Antioch).

According to terms of the contracts, the Department compensates each agency for additional costs of purchasing a substitute water supply from the Contra Costa Canal to replace water supplies of usable quality lost because of SWP operations. Credits for the number of days of above-average water supplies of usable quality from Mallard Slough and the San Joaquin River accrue to offset the number of below-average days in future years.

Information in this chapter was contributed by the Division of Planning and Local Assistance, the Central District, and the Office of State Water Project Planning.

Chapter 3

Environmental Programs

Delta Cross Channel

Significant Events

- Delta inflow was high while State Water Project export pumping was relatively low during spring, early summer, and fall 1998 due to high rainfall in the Central Valley. The high inflow and low pumping were sufficient to protect fishery resources, alleviating the need for any additional adjustments in SWP operations.
- National Marine Fisheries Service listed the steelhead as threatened under the Federal Endangered Species Act. The California Fish and Game Commission listed the spring-run chinook salmon as threatened under the California Endangered Species Act. NMFS also adopted late-fall, spring, and fall-run chinook salmon as candidate species for listing as threatened or endangered under FESA. The U.S. Fish and Wildlife Service deferred its decision to list the Sacramento splittail as a threatened species under FESA.
- The California Department of Fish and Game and the Department of Water Resources approved and began implementing six fishery-improvement projects to offset fish losses at Banks Pumping Plant.
- The Vernalis Adaptive Management Plan, a 12-year federal/State research component associated with the San Joaquin River Agreement, directed intensive fisheries sampling in the lower San Joaquin River. From April 15 to May 31, a series of fisheries studies assessed salmon smolt survival under high flow/low export conditions. In June 1998, the Department signed a Statement of Support encouraging SWRCB to implement VAMP. The draft EIS/EIR on meeting flow objectives for the San Joaquin River Agreement was released in September 1998.

The Department of Water Resources has developed and put into action several programs to avoid, minimize, or offset adverse impacts that might result from construction and operation of State Water Project facilities.

Operations for Fish Species of Concern

Avoiding and minimizing adverse impacts to fish species of concern is a primary consideration in operation of the SWP. A species of concern is one that has been listed or proposed for listing as threatened or endangered by a State or federal fishery agency. Maintaining flexibility in operations is key to avoiding and minimizing impacts to fishes of concern. Operational responses can include curtailing exports, changing delivery schedules, increasing reservoir releases, preferential use of certain facilities, or a combination of these actions.

San Joaquin River Spring Pulse Flow

In recent years, the Department coordinated with the U.S. Bureau of Reclamation to decrease Delta exports and increase flows in the San Joaquin River from April 15 through May 15, to benefit fall-run chinook salmon emigrating from the San Joaquin River basin. Spring runoff from storms and snowmelt in the Central Valley made this unnecessary in 1998. Pumping early in the season filled SWP storage reservoirs south of the Delta, reducing the need to pump in the spring. High rainfall and flood releases from upstream reservoirs also reduced south-of-the-Delta water demands and the need for USBR to augment San Joaquin River flow.

Delta Export Curtailments Due to Delta Smelt

The biological opinion on the effects of SWP/Central Valley Project operations on Delta smelt uses the combined (SWP and CVP) Delta smelt salvage as thresholds to reinitiate consultation between USFWS, USBR, DFG, and the Department. If needed, further actions are taken to reduce water

project impacts on Delta smelt. These thresholds include:

- the 14-day running average of combined SWP and CVP Delta smelt salvage, commonly referred to as the “yellow-light level”; and
- the cumulative total of combined salvage for each month, commonly referred to as the “red-light level.”

Reaching the yellow light triggers informal consultation to consider options for reducing Delta smelt take. Reaching the red light triggers formal reconsultation among the agencies to determine whether additional actions are necessary to avoid jeopardizing the species.

The red-light level is based on historic salvage data and varies among the months of the year and water-year types. For example, in an above-normal water year like 1997, the red-light level ranges from 733 fish in December to 11,990 fish in October. Monthly red-light levels for below-normal water years are generally higher—as much as six times higher—than levels for above-normal water years.

In 1998, the distribution and salvage levels of Delta smelt never reached a point that required curtailment of SWP exports. Delta inflow and outflow were high and exports were low throughout the spring and early summer, contributing to movement of young smelt away from the export facilities and into the western Delta and Suisun Bay.

Figure 3-1 shows the abundance index for Delta smelt from 1967 through 1998, based on fall mid-water trawl sampling. The fall abundance index is important because it provides the best estimate of

the adult Delta smelt population. The index for 1998 was up from 1997, ending the odd-year high abundance, even-year low abundance phenomenon observed since 1991. Scientists do not know what causes variations in abundance among years.

Spring-Run Chinook Salmon Response Plan

In June 1997, the California Fish and Game Commission adopted a Special Order instructing DFG to assess the range of possible flow and export conditions that yearling and smolt spring-run salmon may encounter within the Delta. If operational changes are deemed necessary, then DFG was instructed to develop and present a plan to the CALFED Operations Group recommending target levels of protection and measures to achieve that protection. The resulting plan targeted late-fall SWP and CVP operations and outlined a monitoring program, identified indicators that would trigger a response, and identified possible actions to minimize SWP and CVP impacts on spring-run salmon. This plan was modified to improve protection of the species.

Flow, turbidity, and fish movement or presence were all continuously monitored by using in-stream measurements, surveys, and fish screw traps. The indicators included an increase in flows or turbidity in the Sacramento River and its tributaries, fish migration towards the Delta, and the detection of spring-run salmon at the export facilities. Possible actions included the closure of the Delta Cross Channel gates, cessation of outflow modifications (a return to the 4,500 cfs average north Delta outflow index for the remaining period), and other operational adjustments as needed.

Implementation of the plan started in November 1998 and is expected to continue through January 1999. The Cross Channel gates were closed in early September for flood control due to high flows in the Sacramento River. Although flows dropped, the gates remained closed through the remainder of the year because (1) there were no water quality problems in the Delta and (2) fish sampling found several winter-run-sized salmon young in the north Delta.

Fisheries Restoration

In 1998, the Department cooperated with the U.S. Department of the Interior to carry out the intent of the 1992 Central Valley Project Improvement Act's Restoration Plan for the Anadromous Fish Restoration Program in the Delta. The program develops and implements reasonable efforts to at least double natural production of anadromous fish migrating through the Delta. These include both native anadromous fishes (i.e., chinook salmon, steelhead, white sturgeon, and green sturgeon) and nonnative fish (American shad and striped bass). Efforts in the Delta include adjusting Delta Cross Channel gates' operation and extensive real-time fisheries monitoring. CVPIA impacts SWP operations through its directive to the CVP to comply with State water law and Coordinated Operating Agreements in any CVPIA action. The State shares some costs for environmental mitigation under CVPIA. Anadromous Fish Restoration Program activities also incorporate the work of the CALFED process and the restoration actions already supported by stakeholders in the Bay-Delta process. The Delta smelt biological opinion (1-year and long-term) incorporated specific operational measures consistent with CVPIA that benefit Delta smelt while providing concurrent benefits to anadromous and resident fisheries.

The Vernalis Adaptive Management Plan, a 12-year research component associated with the San Joaquin River Agreement, directed intensive fisheries sampling in the lower San Joaquin River. From April 15 to May 31, 1998, a series of fisheries studies assessed salmon smolt survival under high flow/low export conditions. Varied export pumping rates were coordinated with fisheries collection efforts under VAMP through the end of May. The San Joaquin River Agreement attempts to satisfy the goals of the Bay-Delta Accord to improve fisheries conditions while balancing the protection of long-held water rights on the San Joaquin River and its tributaries. The agreement settles legal challenges to the 1995 Bay-Delta Accord by water rights holders. In June 1998, the Department signed a Statement of Support encouraging SWRCB to implement VAMP. Public hearings on its implementation are expected to continue into 1999.

Petitions to List Additional Fish Species

Federal and State fish and wildlife agencies listed two fish species as threatened and considered listing two others as threatened or endangered. Listing increases the likelihood that these species will impact State and federal water project operations.

NMFS listed Central Valley steelhead trout as threatened under FESA in March 1998, but deferred its decision to adopt a 4(d) rule until 1999. The 4(d) rule defines if and when NMFS needs to authorize the incidental take of the fish.

The California Fish and Game Commission listed spring-run chinook salmon as threatened under CESA in August 1998.

NMFS also adopted late-fall, spring, and fall-run chinook salmon as candidate species for listing as threatened or endangered under FESA. NMFS could not detect enough differences between the fall and late-fall run to consider them as distinct evolutionarily significant units under ESA. Therefore, the two runs are being considered as one subspecies for listing consideration. NMFS held public hearings during the summer to solicit comments on the proposed listing. A decision on whether to list the two species is scheduled for early 1999.

The USFWS decision to list splittail as threatened was postponed again. This species has been considered for listing since 1994. USFWS reopened the comment period in 1998 to receive the most recent information on the status of the species.

The Department and USBR consulted with NMFS and DFG about the potential impacts of SWP and CVP operations on the newly listed steelhead and spring-run chinook salmon. A biological opinion and take authorization for these species is expected in 1999. The Department and USBR also modified the 1997 Spring-Run Chinook Salmon Response Plan to provide greater and more immediate protection for the species in fall 1998.

Fish Population Estimates

Figure 3-2 shows estimates of returning adult winter-run chinook salmon from 1967 through 1998. The estimated escapement for 1998 was 2,610, which more than replaced the estimated 1,361 adults in the parent stock of 1995. This is a very positive sign for winter-run salmon, as it demonstrates the reproductive population is increasing. Factors such as improved spawning and rearing habitat, reduced losses in the Delta, reduced commercial fishing losses, and ocean conditions are all thought to have benefited winter-run salmon.

Figure 3-3 shows the fall midwater trawl index for young-of-the-year Sacramento splittail for the period 1976 through 1998. The 1998 index, the highest on record, was probably the result of the ample seasonally flooded habitat (i.e., Sutter and Yolo bypasses) created by the volume of high winter and spring runoff.

Feather River Fish Studies

Joint Department and DFG salmon studies continued in 1998 on the lower Feather River and at the Feather River Hatchery. These studies will help support the Department in the upcoming process to renew the Federal Energy Regulatory Commission license for the Oroville facilities.

Studies in 1998 focused on documenting the number and distribution of in-channel adult fall-run salmon. As in previous years, the number and distribution of adult fall-run salmon suggest that superimposition of spawning adults is a major problem in the river, particularly in the low-flow channel. Superimposition occurs when salmon repeatedly spawn in the same location, digging up previously deposited eggs and smothering other nests, resulting in decreased egg survival. This type of excessively localized spawning activity appears to be related to both salmon density and flow distribution. It appears that more flow from the low-flow channel may attract more salmon to the upper reach of the river, exacerbating the problem. This effect may cancel benefits from the increased spawning areas available at higher flows. A yearly trend toward higher densities of salmon spawning immediately downstream of Feather River Fish

Hatchery suggests hatchery operations may also play a role in spawning superimposition. This hypothesis will be further investigated in coming years, using results from a tagging program at the hatchery.

Mitigation Projects

In 1986, the Department and DFG signed the Four Pumps Agreement to annually provide funds to replace fish lost at the intake facilities. It also provides \$15 million for additional projects to compensate for losses prior to 1986. Although the agreement focuses on chinook salmon, striped bass, and steelhead, it also considers other fish.

Since 1986, the Department has spent \$24 million on mitigation projects developed under this agreement. These projects include improving salmon spawning and rearing habitat, planting hatchery- and net-pen-reared striped bass, implementing a conjunctive-use project to improve salmon and steelhead migration flows in Mill Creek in Tehama County, constructing fish ladders and screens on Butte Creek and fish screens in Suisun Marsh, and enhancing enforcement of fish and game laws in the Delta and upstream to benefit salmon, steelhead, and striped bass and provide increased protection for spring-run salmon.

In 1996, DFG and the Department amended the agreement to:

- provide an additional 5 years to spend the remaining \$9 million of the \$15 million lump sum provided in the agreement; and
- specify the likely allocation of the remaining funds.

Because of difficulties in developing mitigation projects, the Department could not spend the full \$15 million in the 10 years required by the original agreement. The remaining funds were tentatively allocated to provide:

- \$2 million for screening diversions in Suisun Marsh;
- \$1 million for predator-isolation projects on San Joaquin River tributaries;
- \$2 million for a conjunctive-use project to improve spring-run salmon migration in Deer Creek in Tehama County; and
- \$4 million for a salmon conservation hatchery on the Tuolumne River.

Other mitigation projects approved in 1998 for implementation from the agreement's annual and \$15 million funds include:

- a 3-year extension of enhanced law enforcement in the Delta and upstream to benefit salmon, steelhead, and striped bass;
- reducing juvenile salmon stranding in the lower Feather River (pilot project);
- stocking 235,000 yearling striped bass;
- planning and constructing a salmon habitat project on the Merced River to improve salmon survival by eliminating predator habitat from rearing areas and migration pathways and by improving salmon-spawning habitat;
- planning for additional salmon hatchery production to provide fish to supplement natural salmon production or provide subjects for fish studies in the San Joaquin Basin; and
- operating a pen to acclimate hatchery-reared salmon during their release into San Pablo Bay to improve their survival.

Information in this chapter was contributed by the Environmental Services Office and the Division of Operations and Maintenance.

Chapter 4

Water Quality Programs

Anthony Lee, retired annuitant, conducting tests at Bryte Chemical Laboratory

Significant Events

- On December 3, 1998, the State Water Resources Control Board adopted Water Right Order 98-9. The order is an interim order that continues, as modified, the temporary terms and conditions set forth in WR 95-6. On September 17, 1998, SWRCB adopted WR 98-6, which authorized the Department and U.S. Bureau of Reclamation to vary flows for meeting certain Suisun Marsh salinity standards and waive standards during salmon passage experiments (October 1998 to May 2001).

Many Californians rely on the State Water Project for part or all of their daily water needs. Water for agriculture, industry, power generation, recreation, and fish and wildlife needs also comes from the SWP. The Department monitors SWP water quality throughout the system, using an automated network of continually operating recorders and laboratory analyses of field samples collected weekly, monthly, quarterly, or annually.

Delta Activities

The SWRCB sets water quality objectives for beneficial water uses. The Department of Health Services establishes maximum contaminant levels for treated drinking water. Additional contractual water quality objectives at points of delivery are set by Article 19 of the long-term SWP water supply contracts. Water quality in the Delta and Suisun Marsh is protected under SWRCB Decision 1485, as amended by 95-6, to be consistent with the Principles for Agreement on Bay-Delta Standards, December 15, 1994 (Bay-Delta Accord).

The Bay-Delta Accord, formulated by CALFED and representatives of several urban, agricultural, and environmental water interests, was intended to be in effect for 3 years. The accord established new out-flow standards, modified the criteria for implementa-

tion of the California Endangered Species Act to increase water project operations flexibility, and contained a funding mechanism for nonflow-related measures (Category III).

SWRCB adopted a water quality control plan for the Bay-Delta (1995 Bay-Delta Plan) in May 1995, incorporating the agreements reached in the accord. In June 1995, SWRCB adopted WR 95-6, an interim order amending the terms and conditions of SWRCB's D-1485 and the SWP and Central Valley Project water rights permits to be consistent with the Bay-Delta Accord. WR 95-6 gave the SWP and CVP the right to jointly use each other's point of diversion in the south Delta (Banks and Tracy pumping plants) to avoid causing significant adverse effects on the environment. Under a separate petition approved by SWRCB, the CVP Tracy Pumping Plant exported SWP water from March through May 15, 1998, when

State Water Resources Control Board

The State Water Resources Control Board, established by the California Legislature in 1967, oversees water rights and water quality for California. Among its many responsibilities, SWRCB issues permits for the use of all water except groundwater and riparian water; distributes State and federal loans and grants for constructing sewage facilities; adopts water quality control plans, regulations, and policies; and sets water quality standards for the Delta.

To implement its mandate to set Delta water quality standards, SWRCB issued Water Right Decision 1485: Sacramento-San Joaquin Delta and Suisun Marsh in 1978. That decision focused on SWP and CVP water right permits and operations, requiring the SWP and CVP to maintain Delta water quality as it would have existed without the projects. However, after Decision 1485 was adopted, various water users as well as the federal government challenged it in court. Since then, SWRCB updated its Water Quality Control Plan. It was adopted on May 22, 1995. Water Right Order 95-6 amended D-1485 to be consistent with the plan on June 8, 1995. Water Right Order 95-6 modifies the standards for Suisun Marsh and allows the CVP and SWP to use either project's Delta pumping plant to pump project water to increase fish protection and maintain project delivery capability.

forebay repairs curtailed exports from Banks Pumping Plant.

In December 1997, CALFED extended the Bay-Delta Accord for 1 year. On December 3, 1998, SWRCB adopted WR 98-9. The order is an interim order that continues the modified temporary terms and conditions set forth in WR 95-6. The order will expire upon either adoption by SWRCB of a comprehensive water rights decision that allocates final responsibilities for meeting the 1995 Bay-Delta objectives or on December 31, 1999, whichever comes first. SWRCB held several public water rights hearings during 1998 as part of its comprehensive Bay-Delta water rights process to consider alternatives to implement the 1995 water plan and consider impacts of and responsibility for meeting the objectives.

WR 98-9 increased the time allowed for payback pumping through the joint point of diversion permit from 6 months (specified in WR 95-6) to 1 year. WR 98-9 also required that the Department and USBR consult with the South Delta Water Agency, submit a response plan, and receive SWRCB's permission prior to joint point pumping. The response plan specifies departmental and USBR actions to ensure adequate southern Delta channel water levels for agricultural diversion. The order also directed both agencies to conduct studies to develop a better understanding of the effect of make-up pumping on central and south Delta water channels.

WR 95-6 established the Suisun Ecological Workgroup and set August 1997 as the date for a final report on the impact of new 1995 Bay-Delta Plan Suisun Marsh standards. SEW submitted an interim report in September 1997. SWRCB issued WR 98-9, extending the final reporting date to June 1, 1999. On September 17, 1998, SWRCB adopted WR 98-6, which authorized the Department and USBR to vary flows to meet certain Suisun Marsh salinity standards and waive standards during salmon passage experiments (October 1998 to May 2001).

The Bay-Delta Accord specifies that compliance with the incidental take provision of the Federal Endangered Species Act was not intended to result in any additional water costs to CVP and SWP water supply. Thus, the accord allows for some operational flexibility through the deliberations of the CALFED Operations Group. Both the CVP and SWP operate in accordance with biological opinions regarding Delta smelt and winter-run chinook salmon. These two opinions were revised March 6, 1995, and May 17, 1995, respectively, to conform with the accord.

The Department conducts extensive monitoring to protect beneficial uses of water in the Delta and Suisun Marsh as required by SWRCB's D-1485, amended by WR 95-6. Figure 4-1 shows water quality monitoring sites throughout the Sacramento-San Joaquin Delta.

Water Supply Conditions

Water Year Classifications and Water Supply Indexes

The 1997-98 water year was classified as "wet" for most of California. It continued a 4-year trend of above-average or wet water years. Although December 1997 was very dry, storms in January and February 1998 produced twice the amount of normal monthly rain.

October started the water year with near-normal precipitation, while November was above average. After a slow start in December, the winter turned wet. However, the February storms were relatively cool, which helped build up a large snowpack in the mountains. With the exception of 1995, 1998 had the heaviest snowpack since 1983, another strong El Niño year.

March and April had above-average precipitation, but were not nearly as wet as February. May was cool and wet, more typical of March weather. June started out cool and wet, but after mid-month the weather turned dry for the remainder of the summer until September, which saw near-normal showers in the mountains.

**Figure 4-1
Water Quality Monitoring Sites in the Sacramento-San Joaquin Delta**

Station Number and Name

C3	Sacramento River at Greens Landing	D14A	Big Break near Oakley
C7	San Joaquin River at Mosedale Bridge	D15	San Joaquin River at Jersey Point
C9	West Canal at mouth of intake to Clifton Court Forebay	D16	San Joaquin River at Twitchell Island
C10	San Joaquin River near Vernalis	D19	Franks Tract near Russo's Landing
D4	Sacramento River above Point Sacramento	D22	Sacramento River at Emmaton
D6	Suisun Bay off Bulls Head Point near Martinez	D24	Sacramento River below Rio Vista Bridge
D7	Grizzly Bay at Dolphin near Suisun Slough	D26	San Joaquin River at Potato Point
D8	Suisun Bay off Middle Point near Nichols	D28A	Old River opposite Ranch Del Rio
D9	Honker Bay near Nichols	D41	San Pablo Bay near Pinole Point
D10	Sacramento River at Chipps Island	MD7A	Little Potato Slough at Buckley Cove
D11	Sherman Lake near Antioch	MD10	Disappointment Slough at Bishop Cut
D12	San Joaquin River at Antioch Ship Channel	P8	Middle River at Buckley Cove
		P10A	Middle River at Union Point
		P12	Old River at Tracy Road Bridge

SWRCB's 1995 Bay-Delta Plan contains objectives conditioned by water-year type, which, in general, become less stringent in more critically dry years. The water year classification system provides relative estimates of a basin's available water supply from the amounts of rainfall, snowmelt runoff, and groundwater accretion rates. Water-year types can be classified as wet, above-normal, normal, dry, and critical.

The Bay-Delta Plan applies a water-supply forecast tool, called the Sacramento River Hydrologic Region 40-30-30 Water Supply Index, to replace the Sacramento River Index. SWRCB first introduced the 40-30-30 Water Supply Index in its 1991 Water Quality Control Plan for Salinity. The Bay-Delta Plan proposes to further refine the 40-30-30 Water Supply Index by eliminating the subnormal snowmelt and "year-following-dry or critical year" provisions found in D-1485.

The Sacramento Valley Unimpaired Runoff lists the major flows into the Sacramento Basin. The varying factors used in the 40-30-30 Index are percentages of the following: the contribution of the current year's April to July SVUR (40 percent), projected current October through March SVUR (30 percent), and the previous year's 40-30-30 Index (30 percent, with a 10-million-acre-feet capacity limit).

The 1995 Bay-Delta Plan also includes a San Joaquin River Basin 60-20-20 Index, which uses methods similar to the Sacramento River 40-30-30 Index. The sum of both indexes—the Eight River Index—determines the duration of the fish and wildlife salinity/flow standard at Chipps Island or Port Chicago during February through June.

The April to July SVUR forecast for May 1, 1998, was 10.06 million acre-feet, 153 percent of average. The resulting 40-30-30 Index was 12.4 million acre-feet, or 13 percent increase over the 40-30-30 Index of 11 million acre-feet in 1996-97. The water year was classified as "wet" for all beneficial uses. The San Joaquin 60-20-20 Index was also classified as "wet" for 1998, with 5.1 million acre-feet. The Eight River Index was forecast as 16.17 million acre-feet for April to July.

Operations under the Bay-Delta Accord, Amended D-1485, and the Winter-Run and Delta Smelt Biological Opinions

The Department and USBR continued to operate the projects in accordance with the 1994 Bay-Delta Accord and 1995 Bay-Delta Plan and WR 95-6, which brought D-1485 and D-1422 into conformance with the accord. The accord established water quality, flow, and operational criteria for the estuary. Operations of the CVP and SWP were to be guided by the CALFED Operations Group through coordination with CVPIA and CESA requirements. The CALFED Ops Group, formed in 1994 by the Framework Agreement between the Governor's Water Policy Council of the State of California and the Federal Ecosystem Directorate, consists of representatives from seven State and federal agencies. The agreement also expands real-time monitoring of fish movement and conditions in the estuary to aid daily water management. The purpose of real-time monitoring is to provide more timely protection of targeted fish species from entrainment at the Delta facilities of the SWP and CVP and ensure water supply reliability. See Chapter 3 for a discussion of other environmental issues.

Water Quality Standards

Water quality standards and objectives are categorized by the beneficial uses they are intended to protect. They include municipal and industrial standards, agricultural standards, and fish and wildlife standards. The Department attempts to meet Bay-Delta Plan objectives and amended D-1485 water quality and flow standards through releases from upstream reservoirs and Delta export operations. However, the 1995 Bay-Delta Plan also addresses San Joaquin River water quality by incorporating the D-1422 Vernalis salinity standard. San Joaquin River flows are not influenced by the SWP's upstream reservoirs, but they may be influenced by SWP exports and placement of south Delta barriers.

During 1998, the Delta Cross Channel gates were open only 53 days. The Cross Channel gates close during January whenever Delta outflow is greater

than 12,000 cfs—and any time Sacramento River flow at Freeport exceeds approximately 25,000 cfs—to reduce flooding potential on the Mokelumne River and to prevent scour on the downstream side of the gate structure. SWRCB's 1995 Bay-Delta Plan contains measures that require closure of the Delta Cross Channel gates from February 1 until May 20, during peak migration of winter and fall-run chinook salmon smolts and steelhead, and spawning season for Delta smelt, longfin smelt, Sacramento splittail, and striped bass.

The gates remained closed, with Freeport flows exceeding 25,000 cfs, for most of January through mid-July 1998. The gates opened for an uninterrupted period of 53 days from July 17 to September 7, under lower Sacramento River flow rates of around 15,000 cfs. The gates closed again on September 8, 1998, as flows rose above 20,000 cfs; they remained closed for the rest of 1998 due to continuing high river flows and fall fisheries concerns.

Specific water quality requirements are set to benefit municipal uses, agriculture, and fish and wildlife. High river outflows, export restrictions, and water releases to benefit migrating fish (both pulse and attraction flows) helped maintain most electrical conductivity values well below objectives. The wet-year municipal and industrial water quality standard for chloride at the Contra Costa Canal Intake near Rock Slough (240 days < 150 mg/L) was met during 1998. An additional standard for maximum chloride levels of 250 mg/L at the Contra Costa Canal, Tracy Pumping Plant, Clifton Court Forebay, and Barker Slough was also met.

Agricultural objectives in 1998 included an EC standard of 0.45 mS/cm (14-day running average) during the irrigation season from April to mid-August, set at Emmaton, Jersey Point, Terminous, and San Andreas in the western and central Delta. Additional salinity standards were applied year-round in the southern Delta on the San Joaquin River, Old River, and at Tracy and Clifton Court Forebay (30-day running average). All agricultural standards were met.

Estuarine Habitat Protection Standard

The estuarine habitat protection standard incorporates modified X2 criteria (geographic isohaline),

first established in the 1994 Delta smelt biological opinion. The upstream movement of a 2 ppt isohaline (2 parts per thousand of salt in the water), measured as 2.64 mS/cm at the surface, is maintained within a certain range of positions in the estuary by adequate outflow. These positions (Chippis Island or Port Chicago from February through June) are associated with fish and biota abundance.

The number of days per month when the daily averaged EC maximum (2.64 mS/cm) is in effect at Chippis Island or at Port Chicago is conditioned by the previous month's Eight River Index. This may alternately be met with a maximum 14-day running average EC of 2.64 mS/cm or with specific Delta outflow, set at a 3-day average of 11,400 cfs or 29,000 cfs, when the X2 position is at Chippis Island or Port Chicago, respectively. The Port Chicago standard becomes effective when the Port Chicago 14-day EC average immediately prior to the first day of the month is less than or equal to 2.64 mS/cm. However, the February Port Chicago objective is only in effect when the January Eight River Index is greater than 1 million acre-feet. During 1998, the Eight River Index for January through May was 5.21 million acre-feet, 7.45 million acre-feet, 5.11 million acre-feet, 4.53 million acre-feet, and 5.54 million acre-feet, respectively. Each 14-day average EC preceding month's start was less than 0.4 mS/cm, and the Port Chicago objective prevailed.

From February through June, a wet-year habitat protection flow, measured as Net Delta Outflow, is set at 7,100 cfs, calculated as a 3-day running average. This standard may be used in lieu of the Collinsville minimum daily average or 14-day running average EC of 2.64 mS/cm. From February 1 through June 30, the 3-day running average of Net Delta Outflow Index never fell below 51,874 cfs and averaged more than 100,000 cfs for the period, meeting both Port Chicago and habitat protection NDOI minimums.

Flow Standards

D-1485 sets year-round minimum fish and wildlife flows to benefit salmon migration measured in the Sacramento River at Rio Vista between 1,000 and 5,000 cfs, using 30-day running averages. The winter-run salmon biological opinion also sets wet-year,

mean monthly flow objectives of 3,000 cfs, 4,000 cfs, and 4,500 cfs for September, October, and November to December, respectively. During these periods, the 7-day running average cannot be more than 1,000 cfs below the monthly average. Rio Vista flow never fell below 10,000 cfs during the entire year.

The Bay-Delta Plan incorporated minimum San Joaquin River base and pulse flows from the winter-run salmon biological opinion. These are measured at Vernalis on the San Joaquin River. Base flows are set at 3,420 cfs from February to April 14 and from May 16 through June 30, if the X2 objective is required to be at the further downstream Port Chicago location. The base-flow objective is relaxed to 2,130 cfs when X2 is not required to be west of Chipps Island. During wet years, the San Joaquin River spring pulse flow for April 15 to May 15 is set at a mean of 8,620 cfs at Vernalis. However, the CALFED Ops group may vary the actual timing and duration of the pulse/attraction flow, based on real-time monitoring data. All Vernalis base flows and pulse flows were met, with all daily flow values greater than 10,000 cfs for the period.

An additional requirement calls for a minimum monthly San Joaquin River flow rate of 1,000 cfs during October, with an additional 28,000 acre-feet pulse/attraction flow to bring San Joaquin River flows to 2,000 cfs. This was met, with an October 1998 monthly flow that averaged 5,715 cfs.

Net Delta Outflow Index

Delta outflow cannot be measured directly due to the tidal influence in the Delta. An approximation of Delta outflow is calculated instead, using measured inflows, exports, and estimated Delta water use. The NDOI, introduced in the 1995 Bay-Delta Plan, guided operations in 1998. It provides a more accurate method for calculating Delta outflow by including inflows of the Yolo Bypass system, the eastside stream system consisting of the Mokelumne, Cosumnes, and Calaveras rivers, the San Joaquin River at Vernalis, and the Sacramento Regional Treatment Plant. The NDOI-calculated flows cannot be directly compared to the Delta Outflow Index used prior to 1995, because the Sacramento River bypass flows, along with several eastside stream

flows, were not incorporated into the DOI. The calculation of Delta consumptive use also differs in NDOI.

In 1998, excess outflow conditions, as defined by the Coordinated Operating Agreement, predominated for the entire year. Excess conditions allow greater flexibility in project operations. From January 17 through March 10, the outflow, calculated as NDOI, was sustained at more than 100,000 cfs. This period included a 24-day period with outflow of more than 200,000 cfs and within it, a 5-day period of flow more than 300,000 cfs (February 7 to 10). NDOI rose more than 100,000 cfs again from March 26 to April 10 and briefly in June for 3 days (June 2 to 4).

The 1995 Bay-Delta Plan sets specific minimum monthly NDOI standards between 3,000 and 8,000 cfs for the protection of fish and wildlife during January and from July to December. Monthly NDOI was highest in February at 244,278 cfs. Monthly NDOI remained above 8,000 cfs during all months of 1998, with the lowest monthly mean in October at 12,267 cfs. Additional NDOI minimums are set for the protection of striped bass from May 6 to July, usually between 10,000 cfs and 14,000 cfs. Daily NDOI values never fell below 21,298 cfs and averaged 57,159 cfs for the period. All NDOI standards were met in 1998.

Export Standards

The Bay-Delta Accord conditions SWP and CVP exports, using a ratio of total Delta exports to Delta inflow, and is expressed as a maximum allowable percentage or ratio. The maximum allowable export/inflow ratio or percentage varies by month. In February, it is conditioned by the previous month's Eight River Index. During the San Joaquin River pulse flow for April to May, additional export restrictions may apply. However, WR 95-6 allows the CVP and SWP to export at either project's pumping plants to increase fish protection, with concurrence of the CALFED Ops Group and permission of SWRCB.

The actual export amount is calculated using the 3-day average combined inflow rate for Clifton Court Forebay (excluding Byron-Bethany Irrigation District diversions from Clifton Court Forebay) added to the Tracy Pumping Plant diversion. The export/

inflow ratio limit is reported as either a 3-day or 14-day running average. A 14-day running average of inflows is used unless storage withdrawals from upstream reservoirs are being made for export, in which case, a 3-day average of inflows is used. In all water-year types, the February to June maximum combined export rate is 35 percent of Delta inflow; this may be relaxed in February during drier years to between 35 percent and 45 percent. From July to January, the export/inflow ratio rises to 65 percent.

From January 14 to 26, 1998, SWP exports were held to less than 360 cfs and combined exports to about 3,800 cfs to accommodate a low export fish test at both export facilities. This resulted in a low January export/inflow ratio averaging only 26 percent, well below the 65 percent criteria. During the more restrictive February to June period (35 percent objective), actual export/inflow ratio averaged only 3.1 percent. Exports at Banks Pumping Plant were halted entirely for most of February, March, April, and early May. Much of the slowdown occurred in February, caused by downstream flooding and, late in the month, full reservoir storage at San Luis. In February, part of the South Bay Aqueduct pipeline was shut down following erosion damage from high flows in adjacent creeks. Other curtailments during March, April, and early May were needed on portions of the California Aqueduct to repair damage from earlier floods. In addition, Banks exports were reduced during March to lower the Clifton Court Forebay elevation to accommodate repairs to the Clifton Court Forebay dam and intake gate number 4.

Exports at Banks and Tracy pumping plants are limited under provisions of the Bay-Delta Accord to 1,500 cfs or 100 percent of the San Joaquin River flow at Vernalis during the 30-day April 15 to May 15 pulse flow period, whichever is greater. This export limit can be used in lieu of the 35 percent export/inflow ratio only if it results in more restrictive conditions. From April 15 to May 15, the export/inflow ratio dropped to 2.4 percent, as Banks exports were halted or reduced for downstream repairs. Actual combined CVP/SWP period exports averaged only 1,848 cfs, or 10 percent of the Vernalis flow (19,381 cfs).

From July to December 1998 (65 percent objective), the export/inflow ratio averaged 22 percent, never exceeding 44 percent on a daily basis.

In early March, the Department petitioned SWRCB again to allow a temporary joint point of diversion at the CVP Tracy Pumping Plant through mid-May. From March 24 to April 1, 1998, a total of 14,220 acre-feet was exported for the SWP through Tracy Pumping Plant as a joint point of diversion. An additional 579 acre-feet were exported in December. From December 2 to 16, 1998, a total of 14,190 acre-feet of make-up water was conveyed through Banks Pumping Plant for the CVP.

Temporary Delta Barriers

The Temporary Barriers Project began in 1991, following the 1990 release of the *South Delta Water Management Program Draft Environmental Impact Report/Environmental Impact Statement*. The program was designed to resolve local south Delta water supply issues within the larger context of the Department's water banking program. The barriers improve local water levels and circulation patterns, protect fishery resources, improve agricultural operations, and meet other South Delta Water Management Program objectives. Though originally established as a 5-year project, the project was extended for an additional 5 years in 1995. High San Joaquin River and Delta channel flows throughout most of the year prevented the installation of the barriers during 1998.

Fall Dissolved Oxygen Conditions in the Stockton Ship Channel

Historically, dissolved oxygen levels in the eastern Stockton Ship channel have dropped below 5.0 mg/L during the late summer and early fall of most years because of low stream inflows, warm water temperatures, high biochemical oxygen demand, reduced tidal circulation, and intermittent reverse flow conditions in the San Joaquin River past Stockton. These low dissolved oxygen levels can cause physiological stress to fish and block upstream migration of salmon.

A temporary rock barrier is usually installed at the head of Old River during periods of projected low

outflow in the San Joaquin River to increase net flows down the San Joaquin River past Stockton and help alleviate dissolved oxygen concerns in the eastern channel.

In 1998, average daily flows past Stockton ranged from 1,000 to 2,000 cfs, due to the exceptionally wet winter of 1997-98 and the following cool, wet spring. Because of the high flows and the absence of reverse flow conditions past Stockton, the Old River barrier was not installed in fall 1998.

In spite of the high San Joaquin River inflows into the eastern Stockton Ship Channel, a dissolved oxygen depression (an area where dissolved oxygen levels were 6.0 mg/L or less) occurred in the central channel, from Columbia Cut to Fourteen Mile Slough, in August and early September. This area was west of Rough and Ready Island in the eastern channel, where levels less than 5.0 mg/L have generally occurred.

Relatively warm water temperatures measured within the channel in August and early September (22 to 26 degrees C) contributed to the dissolved oxygen depression in the channel in late summer 1998. However, at the range of water temperature values experienced in late summer 1998, dissolved oxygen levels have been lower (less than 5.0 mg/L) in the eastern channel in previous years.

High San Joaquin River inflows into the eastern channel immediately east of Rough and Ready Island were enough to push the area of depressed dissolved oxygen levels westward from the historic sag area in the eastern channel to the central portion of the channel. Greater tidal fluctuations and water column mixing within the central portion of the channel may have contributed to the improved dissolved oxygen levels.

By September 18, 1998, the late-summer-dissolved oxygen depression in the channel was eliminated. By October 20, 1998, dissolved oxygen levels in the channel rose to more than 8.0 mg/L, due to cooler water temperatures (15 to 18 degrees C in October) and sustained high San Joaquin River inflows into the channel.

Biological Surveys

The Department surveys benthic organism density and diversity along with phytoplankton biomass and community composition in the Sacramento-San Joaquin Delta and Suisun and San Pablo bays (the San Francisco Bay-Delta estuary). These surveys are conducted in response to the mandate of D-1485, as amended by the Water Quality Control Plan adopted in May 1995, and as part of the Interagency Ecological Program.

Benthic Monitoring

The benthic monitoring program is conducted to record abundance and distribution trends in macrobenthic (bottom-dwelling) organism populations and to detect and document the introduction of exotic species into the San Francisco Bay/Sacramento-San Joaquin Delta System. Sampling occurs at ten sites, which represent a wide range of benthic-habitat types in the Delta, Suisun, and San Pablo bays. Four bottom grab samples and one sediment sample are taken monthly at all ten sites. As a result of this environmentally-diverse sampling, six new organisms were added to the species list in 1998. The species are as follows:

- *Musculium* sp., a fingernail clam species, was discovered in the San Joaquin River near Stockton in February.
- Two new tubificid worms. One species, *Specaria josinae*, was found at Clifton Court in May. A second species, *Potamothrix* sp., was discovered at Clifton Court in June and near Rio Vista in November.
- Two crab species. *Eriocheir sinensis*, the Chinese mitten crab, was collected in a grab sample in September in the Sacramento River above Point Sacramento. *Cancer productus*, the red rock crab, was collected in San Pablo Bay in December.
- A chironomid, *Gymnometriocnemus* sp., was collected in December in the Sacramento River below the Rio Vista Bridge.

Overall, 148 species of benthic macrofauna were collected in 1998; seven species represent 53 percent of all organisms collected for this year. These seven species include the amphipods *Ampelisca abdita* and

Corophium stimpsoni; a polychaete worm, *Manayunkia speciosa*; the aquatic oligochaetes, *Limnodrilus hoffmeisteri* and *Varichaetadrilus angustipennis*; and the Asian clam species, *Corbicula fluminea* and *Potamocorbula amurensis*. *Ampelisca abdita* and *Limnodrilus hoffmeisteri* were the most abundant species collected, with an average annual total abundance of 2,746 organisms/m² and 2,066 organisms/m², respectively.

Of these seven dominant species, *Ampelisca abdita* and *Potamocorbula amurensis* represent macrofauna that inhabit a more saline environment. They were found in San Pablo Bay, Carquinez Strait, and Suisun Bay. *Potamocorbula amurensis* was also collected in Grizzly Bay and in the Sacramento River above Point Sacramento. *Corophium stimpsoni* is an estuarine species with a wide distribution within the Bay/Delta system, including the Carquinez Strait, Grizzly Bay, Suisun Bay, the Sacramento River above Point Sacramento and below the Rio Vista Bridge, the San Joaquin River near Twitchell Island and near Buckley Cove, the Old River, and the West Canal leading to the Clifton Court Forebay. The remaining four species are strictly freshwater species and have only been collected at stations east of Suisun Bay. In previous years, *Potamocorbula amurensis* and *Corbicula fluminea* were dominant fauna in both biomass and number collected at study sites. In 1998, however, *P. amurensis* ranked fourth in annual total abundance and *C. fluminea* ranked seventh.

Phytoplankton Monitoring

Average monthly chlorophyll *a* concentrations were generally below 4 µg/L in most regions in 1998. Maximum chlorophyll *a* concentrations in the lower Delta (southern Delta, eastern Delta, and lower San Joaquin River) were below the 20 to 60 µg/L maxima measured in 1997, while concentrations in the downstream region of San Pablo and Suisun bays in the winter were higher than those in 1997. Low chlorophyll concentrations in Suisun Bay were probably a function of grazing by *P. amurensis*, which has depressed chlorophyll biomass in this region since 1987. The low chlorophyll *a* concentrations in the upper Delta (northern Delta, western Delta, and lower Sacramento River) were similar to those of 1997, but in all regions chlorophyll *a* concentrations were lower than those measured before 1980.

In 1998, a chlorophyll *a* maximum occurred in April or May in most regions, followed by a peak in late summer or early fall. In the lower Delta, however, the maximum concentration occurred in August, when water residence times are high in that region.

The percentage of chlorophyll *a* is also examined as an indicator of phytoplankton activity. Percent chlorophyll *a* is the proportion of chlorophyll *a* in total chlorophyll *a* and pheophytin *a*, a breakdown product of chlorophyll *a*. The high chlorophyll *a* concentrations observed in most regions in the spring were accompanied by more than 50 percent chlorophyll *a*, suggesting phytoplankton were growing well throughout the estuary. The 6 ppt salinity station had concentrations less than 50 percent in the fall, but exceeded 50 percent for more months than in 1997.

Cryptomonas spp. and miscellaneous flagellates were common phytoplankton species in the lower and upper Delta, but the chlorophyll *a* maximum was associated with *Cyclotella* spp. in the lower Delta and *Cryptomonas* spp. in the upper Delta. *Cryptomonas* spp., *Skeletonema costatum*, and miscellaneous flagellates were the most common species in the downstream region. *Skeletonema costatum* was the most common species during the April bloom maximum.

Activities Outside the Delta

Activities conducted outside the Delta include scheduled routine SWP water quality monitoring as well as special studies. Most of these special studies are in response to fish and wildlife and water quality issues of importance to agencies that provide domestic water supply. These agencies face increasingly stringent regulations and look to the SWP to deliver high quality raw water.

Water Quality Monitoring

The Division of Operations and Maintenance collects detailed water quality information on the concentration and distribution of chemical, biological, and physical parameters at 33 aqueduct and reservoir sites located throughout SWP facilities. Stations are situated south of the Delta at reservoirs, pumping plants, powerplants, and check structures of the South Bay, Coastal Branch, and California Aqueduct.

Other monitoring activities are conducted on the North Bay Aqueduct, Feather River and at State reservoirs north of the Delta—Lake Oroville, Antelope Lake, Frenchman Lake, and Lake Davis.

The Water Quality Program of the SWP was established in 1968 with completion of the California Aqueduct. More than 60 different chemical constituents are monitored monthly, quarterly, or annually. In addition, automated stations are maintained for continuous monitoring of aqueduct water.

The Department maintains an analytical laboratory, the Bryte Laboratory in West Sacramento, which processes most SWP laboratory water quality assessments. The Department also contracts for some laboratory services. Water samples from 15 SWP stations are analyzed monthly to determine levels of dissolved solids and concentrations of nutrients, chloride, sulfate, sodium, trace metals, and other constituents. Herbicides, pesticides, organic substances, and phytoplankton are monitored less frequently.

Selected SWP water quality data are available electronically through the Department Internet home page (<http://www.womwq.water.ca.gov>) and reported monthly in the State Water Project Operations Data Report. Table 4-1 presents laboratory results of sampling at several representative stations during 1998.

Delta exports are normally the primary source of water in SWP facilities and reservoirs south of the Delta. Most Delta water is exported south during the winter and spring when the greatest freshwater outflow occurs; as a result, reservoirs south of the Delta are usually supplied with the highest quality water. San Luis Reservoir, the only SWP conservation storage facility between the Delta and Southern California, is usually filled by May 1.

Municipal Water Quality Investigations Program

The Sacramento-San Joaquin Delta provides drinking water for a large percentage of California's population. Because the Delta is a relatively unprotected watershed, water quality degradation is possible from many sources, including abandoned mines, industrial and municipal waste water discharges, storm water

runoff from cities, agricultural discharges, recreational activities, and illegal dumping. The Municipal Water Quality Investigations Program was established to evaluate the suitability of Delta water as a drinking water source, to identify sources of water quality degradation, and to evaluate means of eliminating or preventing degradation of Delta water quality.

Participants in the program include Contra Costa Water District and the municipal water contractors of the SWP. Program advisors include representatives of participating agencies, including the Environmental Protection Agency, California Department of Health Services, and California Urban Water Agencies. Because water quality concerns change rapidly with new drinking water regulations and water quality issues, the MWQI Program must be flexible enough to adapt to changing requirements. The former Delta Health Aspects Monitoring and Delta Island Drainage Investigations programs merged into the MWQI Program in 1990; the program continues to evolve.

The program's initial focus was to compile a comprehensive database on drinking water quality in the Delta. Since then, the program has investigated ways of managing Delta lands and waters to minimize adverse impacts on drinking water quality. The program identified sources of contaminants in the Delta and assessed their significance for drinking water quality and water treatment. Drinking water standards are more difficult to meet when natural organic materials from agricultural drainage are involved.

In addition to monitoring water quality in the Delta, the program now includes studies on source water improvement and management. Several studies developed and tested possible solutions to drinking water problems of the Delta and other watersheds of the SWP.

As required by the Department of Health Services, a 5-year update of the sanitary survey of the SWP resulted in the report, *California State Water Project Sanitary Survey Update Report 1996*. This survey documented water quality conditions and identified potential sources of contamination within the SWP. In addition, the report included recommendations for further investigations and corrective actions. Based

**Table 4-1
1998 Water Quality at Selected State Water Project Locations**

Notes: Turbidity is measured by a continuously-recording Nephelometer and expressed as NTU (Nephelometer Turbidity Units), and Specific Conductance is measured by continuous electrical conductivity recorders, except at Thermalito Afterbay and Check 29, which are based on single monthly samples. Values for chlorides, dissolved solids, hardness, percentages of sodium, and sulfate are correlated from specific conductance except at Thermalito Afterbay and Check 29, which are analytical values. All other selected constituents are the yearly mean of laboratory analytical values sampled monthly. Nondetectable values are assumed equal to reporting limits for calculation of mean.

NR = data not collected or recorded at this location.

^a Mean based on only 11 months.

^b Mean based on only 4 months.

^c Mean based on only 7 months.

^d Mean based on only 10 months.

on these recommendations, activities and investigations within the MWQI Program continue to address these water quality issues. MWQI Program staff plan to begin writing the 2001 sanitary survey update in fall 1999.

The sanitary survey identified the Barker Slough watershed as having the most challenging water quality conditions in the SWP. Water quality problems identified within this watershed included high levels of turbidity and microbial contaminants, as well as high concentrations of organic carbon.

The North Bay Aqueduct/Barker Slough Watershed Study was started to resolve these problems. The study was initially divided into two phases. Phase I began July 1, 1996, and continued until July 1997. The results were published in a report titled *The North Bay Aqueduct Barker Slough Watershed Water Quality Phase I Report*. The second phase began after all sampling for Phase I was completed and reviewed by the Department and the North Bay Aqueduct Technical Advisory Committee. Phase I was designed to quantify water quality constituents at the screening level. Results showed that the upper Barker Slough Watershed was a potentially significant source of contaminants during the wet season. Phase II was designed to further investigate specific pollutants in the upper watershed during the wet season where runoff is high and to collect hydrological data when possible. Results showed that the upper watershed contributes a significant amount of organic carbon and turbidity to Barker Slough during storms. This has been linked to operational challenges for North Bay Aqueduct-supplied treatment plants during these periods. Based on these findings, the Solano County Water Agency has applied for a SWRCB 305(J) grant to work with landowners in the watershed to address these loading issues. Phase III, which began in fall 1998, links the use of auto samplers with automatic hydrological monitoring stations to allow data and water samples to be collected during peak runoff events. The goal is to create mass load calculations at three locations in the watershed. The MWQI Program will continue to work with the stakeholders to provide water quality technical assistance to the project.

In response to a recommendation of the sanitary survey report, the MWQI Program, in coordination with

the Division of Operations and Maintenance and the Metropolitan Water District of Southern California, implemented a Coordinated Pathogen Monitoring program for the SWP and the Delta. This monitoring program began in fall 1996 and continued through April 1998. The program evaluated the microbiological status of SWP source waters for protozoans and bacteria. Additional work was conducted to evaluate the current EPA-approved sampling and analysis methodology used for the study. Results from the 18-month sampling study and the methodology evaluation study is scheduled to be published by the MWQI Program in fall 1999.

Other components of the MWQI Program include:

- predictive computer models developed to determine the costs of treating water from different Delta locations;
- evaluation of proposed CALFED restoration actions in terms of drinking water impacts;
- development of a compendium of federal, State, and local entities conducting water quality monitoring from the San Francisco Bay up through the Delta and in the upper watersheds of the Sacramento River; and
- installation and testing of new instrumentation to provide real-time water quality data to improve Delta water quality.

Collectively, these and other MWQI studies and activities are designed and conducted to address major water quality and water supply issues, such as the Delta's ability to meet user needs, the ability to meet stricter State and federal regulations, and the ability to obtain reliable, clean water supplies in the future. Each study or activity serves to discover, test, and assess possible solutions to problems in the Delta and other watersheds of the SWP and assures that future demands for safe, potable water supplies can be met.

Bryte Chemical Laboratory

Bryte Chemical Laboratory, established in 1951, continues to perform the majority of chemical and other related analyses requested to support the Department's water quality programs. Thousands of water samples are analyzed for minerals, nutrients, metals,

pesticides, and other constituents. Bryte Laboratory continues to manage all analytical contracts with outside laboratories according to the Master Contract Policy approved in fiscal year 1994-95. The laboratory works with the Quality Assurance/Quality Control Section to replace contracts that will expire in fiscal year 1998-99.

Analytical procedures and methods are continually updated and evaluated by the laboratory. Several new methods were added to the list of available services after extensive testing and development. One new procedure involved the reactivity of chlorine with naturally occurring organic matter to form disinfection by-products. The new method will characterize formation potentials of trihalomethanes and haloacetic acids, based on the reactivity of chlorine with natural organic matter found in water. In addition, MTBE was added to an existing laboratory method involving the analysis of volatile organic compounds, allowing the laboratory to perform the required analyses for a MTBE survey. This survey was part of a larger survey conducted by the Association of California Water Agencies, which began in May 1997 and ended in November 1997. Because MTBE has been added to the volatile organics method, it will continue to be routinely analyzed whenever a volatile organic analysis is requested.

The laboratory purchased several new analytical instrument systems during fiscal year 1997-98 to modernize and expand its analytical capabilities. Two of the new systems purchased involve sample preparation. The new, automated solid phase extraction system replaces a labor-intensive manual extraction method formerly used to prepare samples for organic analysis. It will not only reduce labor costs (because it is automated), but will also reduce solvent consumption used in the extraction procedures by 80 to 90 percent. These savings in labor and reagent costs will ultimately reduce the cost of the organic analyses. The laboratory also replaced two other outdated analytical instrument systems with new instrument systems. The total organic carbon analyzer and atomic absorption spectrophotometer, used for arsenic and selenium analyses, are now fully automated, with advanced software features for greater data handling and quality control. These systems have enabled the laboratory to increase its capacity and productivity.

The field and laboratory information management system was also implemented during 1997. This system allows electronic transfer of samples for analysis to the laboratory, thus simplifying the transfer process. It provides users with information on all analytical services available through Bryte Laboratory, including costs. It also provides users with sample requirements for each analysis requested, such as types of containers needed, sample volumes necessary, and the type of sample preservation required. The new system is designed to store all current analytical data, including all required Quality Assurance/Quality Control data pertaining to sample analysis. It is designed to log, track, and assign sample analyses to the appropriate chemist in the laboratory. FLIMS will generate the final reports to the requestor in hard copy and, if required, in electronic format. The implementation and beta testing of FLIMS was completed in 1997 and the system is now fully operational.

Quality Assurance/Quality Control

The Quality Assurance/Quality Control Program, established in 1992, ensures that data produced by the Department's annual multimillion dollar investment in environmental monitoring activities meets high quality standards and is also scientifically defensible.

In 1998, the following QA/QC technical document was updated:

- *Quality Assurance Management Plan for Environmental Monitoring Programs*

In addition, the following technical document continued to be developed:

- *Bryte Chemical Laboratory Quality Assurance/Quality Control Manual*

The QA/QC program actively ensures that in-house and contract laboratories providing analytical services for the Department comply with QA/QC procedures, standards, and requirements. The QA/QC program:

- periodically submitted performance evaluation samples to all in-house and contract laboratories to evaluate their performance;
- conducted an evaluation of the QA/QC procedures of some of the Department's continuous monitoring equipment;
- continued the QA/QC review of incoming environmental data for programs within the Water Quality Assessment Branch of the Division of Planning and Local Assistance; and
- began using FLIMS at Bryte Chemical Laboratory. This data system allowed the lab to handle sample analysis much more efficiently. Data are being archived in anticipation of the development of a water data library of the Department's surface and ground water quality data. Electronic data results are also being passed on to the laboratory's customers upon request.

Quality Assurance/Quality Control

The water-related data collected by the Department must be scientifically supportable. To help protect the Department's large investment in water-related data, the Quality Assurance/Quality Control Program was created in 1992. Under the QA/QC program, guidance documents are published, training courses are implemented, and technical support is provided to managers of water data collection programs throughout the Department.

In addition to its basic mission of supporting and strengthening the validity, integrity, and credibility of water data collected by the Department, the QA/QC program also provides leadership in efficient planning and execution of data collection activities. To minimize cost, it is necessary to carefully plan, implement, interpret, and evaluate data collection activities. Good data collection programs begin with identifying the data collection goal and establishing the data quality objectives to meet the goal. This planning is done before actual data collection and assures that the correct type and amount of data are collected to meet program objectives. Through this process, the Department avoids collecting inadequate, irrelevant, or extraneous data, and thereby avoids waste.

Other services provided by the QA/QC Program include helping other Department programs develop quality assurance project plans, evaluating QA/QC data to determine the accuracy and precision of envi-

ronmental data, and testing and evaluating the performance of environmental monitoring equipment. Ongoing assistance is provided to all departmental environmental monitoring programs, including those within DPLA, O&M, Environmental Services Office, and the Interagency Ecological Program.

The QA/QC program also conducts research into new methods and procedures used by analytical laboratories and evaluates new types of field equipment for sampling or analysis. These research activities include developing and implementing analytical protocol for simulated distribution system testing for trihalomethanes and haloacetic acids, stability of organic carbon concentrates in samples obtained by autosamplers, and an on-line real-time total organic carbon autoanalyzer.

Suisun Marsh Activities

The Suisun Marsh

Suisun Marsh is about 59,000 acres of tidal and managed brackish water wetlands and 30,000 acres of bays and sloughs. It is the largest contiguous estuarine marsh remaining in the United States. Situated in southern Solano County, west of the Sacramento-San Joaquin Delta and north of Suisun Bay, the marsh encompasses more than 10 percent of California's remaining natural wetlands. In addition, the marsh is the resting and feeding ground for thousands of waterfowl migrating on the Pacific Flyway.

Since the early 1970s, the California Legislature, SWRCB, USBR, DFG, Suisun Resource Conservation District, the Department, and other agencies have focused on preserving the Suisun Marsh as a unique environmental resource. As part of its responsibility for protecting Suisun Marsh, SWRCB included water quality standards for the marsh in D-1485 and WR 95-6 (amending D-1485), which apply to SWP and CVP operations. In 1987, the Department, USBR, DFG, and SRCD signed the Suisun Marsh Preservation Agreement (see sidebar on the following page). SMPA contains provisions for actions to control channel water and soil salinity to mitigate for impacts of the SWP, CVP, and other upstream diverters on managed wetlands in Suisun Marsh.

Suisun Marsh Preservation Agreement Activities

Amending the SMPA. The purpose of Amendment Three is to change SMPA to provide equivalent or better protection to Suisun Marsh-managed wetlands as intended under the original agreement. Amendment Three would make the channel water salinity standards consistent with SWRCB's 1995 Water Quality Control Plan.

Amendment Three of SMPA would update the original agreement. Original provisions of SMPA provide or fund facilities or activities that mitigate effects of reduced Delta outflow caused by SWP and CVP operations and other upstream diverters. Amendment Three would replace large-scale facilities with water and land management actions on managed wetlands to meet the objectives of the original agreement. Amendment Three actions are described in detail in the draft environmental assessment and initial study prepared by SMPA parties in June 1998.

In the original agreement, SMPA parties agreed to limit its provisions primarily to managed wetlands. However, when the Mitigation Agreement, a companion agreement to SMPA, is updated, it will broaden potential mitigation activities to include restoration of tidal wetlands. In addition, the undiked wetlands may be considered in other forums or agreements, such as SWRCB water quality control planning for the Delta, CALFED, USFWS Tidal

Marsh Recovery Plan, and Regional Wetland Habitat Goals Project. Other legal and administrative forums addressing the Suisun Marsh are discussed in detail in the Draft Environmental Assessment and Initial Study for SMPA Amendment Three.

In addition, Amendment Three incorporates channel water salinity standards in the marsh similar to those under the original agreement, consistent with SWRCB's terms and conditions in departmental and USBR water rights permits for the SWP and CVP. At the same time, actions in Amendment Three would provide equivalent or better protection to the western marsh than the SWRCB channel water salinity objectives for stations S-35 and S-97 as described in the *Demonstration Document*.

Amendment Three also requires amending and revising the companion Suisun Marsh Monitoring Agreement. Any monitoring required as part of the new actions would be included in the updated Monitoring Agreement and the Suisun Resource Conservation District will be included as a participant in the new monitoring program. The monitoring agreement will be amended after Amendment Three is finalized and signed by the four SMPA parties.

Before finalizing the draft environmental assessment/initial study, the parties will formally consult with the USFWS, pursuant to Section 7 of the Endangered Species Act, to obtain a biological opinion on

Suisun Marsh Preservation Agreement

In 1986, federal legislation (Public Law 99-546) authorized funds to USBR to protect Suisun Marsh. On March 2, 1987, the Department, USBR, DFG, and SRCD signed SMPA. The objective of SMPA is to assure that USBR and the Department mitigate for any adverse effects of the Central Valley Project and State Water Project on managed wetlands in the marsh, as well as a portion of the adverse effects of other upstream diversions. Under the original agreement, this objective is primarily accomplished by constructing large-scale facilities in the marsh to maintain a dependable supply of adequate quality water within Suisun Marsh channels. A component of the large-scale facilities is the Suisun Marsh Salinity Control Gates facility, which began operating in November 1988.

On August 4, 1995, the Suisun Marsh Coordinators, representing the four agencies party to SMPA, began discussions directed at updating the agreement, pursuant to SMPA Articles 4 and 17. Representatives from USBR, the Department, DFG, and SRCD established an ad hoc Negotiating Team, Technical Group, Drafting Committee, and Environmental Documentation Team. Beginning September 1995, the SMPA Negotiation Team met monthly in Sacramento and made significant progress in developing the basis to amend the agreement. Representatives from the SWP and CVP contractors actively participated in the negotiations. Updating SMPA will reflect future hydrologic and salinity conditions in the Suisun Marsh as prescribed by the SWRCB 1995 Water Quality Control Plan and will place more emphasis on improving water and land management practices and facilities on managed wetlands. The SMPA parties will sign Amendment Three after completing CEQA and NEPA documentation and CESA and ESA consultations.

potential impacts of Amendment Three on endangered species. The parties intend to initiate formal consultation in summer 1999 with the goal of obtaining a draft biological opinion during spring 2000. After public comment on the draft environmental assessment/initial study and the biological opinion, the SMPA parties may need to revise Amendment Three and the draft environmental assessment/initial study to address any new information or environmental impacts unknown at this time. The parties plan to receive a final biological opinion and sign Amendment Three by summer of 2000.

SMPA Environmental Coordination Advisory Team. The SMPA Environmental Coordination Advisory Team was convened to ensure compliance with mitigation and monitoring responsibilities specified in the SMPA. ECAT includes staff from the Department, USBR, DFG Grizzly Island, DFG Central Valley Bay-Delta Branch, and SRCD. USFWS, NMFS, and the U.S. Army Corps of Engineers staff participate on the ECAT in an advisory role.

ECAT documents compliance with biological opinion terms and conditions and permit requirements, and provides reports to SMPA coordinators. ECAT will play a significant role in implementing an amended Suisun Marsh Mitigation Agreement as part of the Amendment Three process. ECAT will coordinate preconstruction inspections as specified in Amendment Three for the Wetland Management Program, Joint-Use Facilities, and Portable Pumps activities. ECAT will also provide guidance to the Water Manager Program, which, as specified, will advise landowners on management practices that benefit endangered species.

Individual Ownership Cost Share Program. The Individual Ownership Cost Share Program is a component of SMPA designed to assist individual landowners with water management on privately owned land within the Suisun Marsh. Funded projects include replacing, lowering, and/or enlarging drainage structures and purchasing pumps to assist drainage. The program began in 1987 with a 50-percent reimbursement by the Department and USBR. Participation in the program has greatly increased since 1994, when SMPA coordinators retroactively increased departmental and USBR reimbursement to 75 percent.

In 1998, two applications for water management projects were submitted and paid. The total cost of these improvements was \$46,633, of which \$39,936 was paid to SRCD and distributed to the landowners. SRCD has seven additional applications for work completed in 1998, and is expected to forward these applications to the Department and USBR for reimbursement during early 1999. The Department and USBR have paid a total of \$1,192,239 since the program began in 1987.

Lower Joice Island Water Intake Fish Screen.

During 1997, the Department, under contract with SRCD, installed a 12-foot diameter conical fish screen on the Montezuma Slough on Lower Joice Island. This intake was constructed in 1990 and permit conditions required installation of a fish screen. Under SMPA, the Department was responsible for installation of the screen, and the individual ownership had responsibility for its operation and maintenance. SRCD and the landowner accepted the installed fish screen on September 9, 1998. Total construction and installation cost was \$403,400.

SWRCB Water Rights Hearings

SWRCB included SMPA management actions specified in Amendment Three as an alternative in its draft EIR for implementing the 1995 Bay/Delta Plan. During the water rights hearing for implementing the 1995 Bay/Delta Plan, which began July 1, 1998, SMPA parties recommended that SWRCB select these actions as the next step in implementing the objectives for Suisun Marsh-managed wetlands.

Suisun Ecological Workgroup

In the 1995 Bay/Delta Plan, SWRCB directed the Department to convene an interagency work group to evaluate the technical basis of the Suisun Marsh water quality objectives and their effects on beneficial uses. Consequently, the Suisun Ecological Workgroup was formed in May 1995, with the purpose of recommending salinity objectives protective of the beneficial uses of the Suisun Marsh. SEW began this process by forming resource-based subcommittees, with participants selected based on their technical expertise. Each subcommittee was responsible for evaluating the impact of various salinity regimes on its ecosystem component, such as brackish marsh vegetation, wildlife, waterfowl, or fish. Findings

from these evaluations, which included identification of significant data gaps, recommendations for long-term monitoring programs, and special studies, were presented at an all-day workshop in March 1998.

In May 1998, SEW participants began examining the effect of salinity on the marsh ecosystem. SEW participants evaluated the impacts of increasing the variability of salinity in the Suisun Marsh. Some subcommittees suggested that a more variable salinity might match historic conditions more closely, support native species, and possibly promote species diversity by decreasing the abundance of nonnative competitive species. However, the marsh has been altered so much that increasing variability in the salinity may, instead, negatively impact the managed wetlands in the marsh. To evaluate these issues, SEW examined and compared alternative salinity regimes. The main alternatives evaluated are:

- Suisun Marsh conditions (X2 standard, Suisun Marsh Salinity Control Gate operation, and numeric standards for the interior marsh);
- Suisun Marsh conditions, with actions in the proposed SMPA Amendment Three;
- X2 standard with SMPA Amendment Three limited to management actions and limited SMSG operations; and
- X2 standard, with limited control gate operations and no interior marsh numeric salinity standards.

The group evaluated the Department's model studies that simulated flow and salinity in the Suisun Marsh with and without control gate operations.

SEW initially intended to recommend several alternatives for salinity objectives, protective of most beneficial uses in the marsh. However, after debating the potential impacts of various salinity regimes on the physical and biological aspects of the ecosystem, it became apparent that the most productive approach was for each subcommittee to produce its own set of recommendations and to comment on the recommendations of other committees. The report to SWRCB will include these different recommendations and highlight common areas among the recommendations.

Since May 1998, subcommittees focused on producing recommendations and drafting their subcommit-

tee chapters, which are expected to be included in SEW's final report to SWRCB. These subcommittee chapters are expected to be distributed for internal review by February 1999.

Modeling Support

SWRCB 1995 Water Quality Control Plan Draft Environmental Impact Report

The departmental Suisun Marsh planning staff completed a modeling analysis of the salinity impacts of the 1995 Water Quality Control Plan in support of the SWRCB draft EIR for implementation of the plan. The report covers six alternatives for salinity control in the marsh, including the management actions proposed under the SMPA Amendment Three process. Since completion of the draft EIR, the amendment management actions have changed. Augmentation of Green Valley Creek from Fairfield Treatment Plant effluent was found institutionally infeasible at this time. The four parties to SMPA modified the management actions, dropping the GVC augmentation and adding a drought response fund in its place. Since Alternative 5 of the modeling report included GVC augmentation as an SMPA management action, it was modified to reflect the current actions. Alternative 5 has been rerun to reflect 1995 WQCP standards and flows and allow for September operation of the control gate. The modeling results are being postprocessed, and an addendum to the Department's modeling report will be prepared for the Board in 1999 before Phase 8 of the Water Rights Hearings.

Suisun Ecological Workgroup

In 1998, Suisun Marsh planning staff provided hydrodynamic and water quality expertise, participated in SEW meetings, and actively participated on the SEW Aquatic Habitat Subcommittee. In addition to providing input to the SEWAH data analysis and recommendation process, Suisun Marsh planning staff performed a statistical study of the correlation between fish abundance in the Suisun Marsh and the location of X2 in Montezuma Slough.

CALFED Suisun Marsh Levee Breach Investigation

The CALFED Bay-Delta program is developing information on the costs and benefits of including Suisun Marsh levees in CALFED's Levee System

Integrity Program and how it would relate to CALFED objectives. A sub-team of the CALFED Levees and Channels Committee was formed to develop this information using modeling analysis and mapping. Twenty-eight individual 2-year modeling simulations have been identified to investigate the hydrodynamics and salinity impact of levee breaches to create shallow water habitat and tidal marsh consistent with CALFED ecosystem restoration goals.

CALFED is considering protection of Suisun Marsh levee integrity for two primary reasons:

- Protection of the exterior levees in the Suisun Marsh sustains seasonal wetland values.
- Maintenance of Suisun Marsh levee integrity ensures that conversion of managed wetlands to tidal wetlands or bayland shallow-water habitat will not be due to levee failure, but instead will be planned with consideration of landowner support, Ecosystem Restoration Program targets, regional wetlands habitat goals, and endangered species recovery plans.

In early February 1998, about 22,000 of the 57,000 acres of the managed wetlands in Suisun Marsh were flooded. The tidal prism in the marsh was expanded by about 85,000 acre feet, roughly 40 percent of the volume of Suisun Bay. The Department and USBR repaired the 11 exterior levee breaches at a cost of about \$1.1 million, to protect the approximately \$80 million program/infrastructure, maintain the ability to meet Suisun Marsh salinity standards, and protect Suisun Marsh and Delta water quality.

In 1998, the Department's Suisun Marsh planning staff conducted a hydrodynamics and salinity modeling analysis to evaluate the potential impacts on the marsh and Delta if the Suisun marsh levee breaches were not repaired. Staff expected that the increased tidal prism created by the additional inundated lands would generally increase mixing of ocean salt into the Bay and Delta. The actual response was more complex. Modeling results suggested that Suisun Bay salinity would generally increase, extreme north and south Delta salinity would decrease, and western Delta salinity would increase or decrease, depending on the size and location of levee breaches and the nature of the tidal flux through the breach.

The CALFED Suisun Marsh levee sub-team modeling analysis is intended to elucidate the mechanisms of the hydrodynamics and salinity response and to identify the links between potential habitat restoration benefit and levee integrity goals.

Interagency Ecological Program DSM2 Project Work Team

In 1998, the Department's Suisun Marsh planning staff hosted four Delta Simulation Model 2 project work team meetings. The team is expected to conduct a multiple-agency consensus calibration of the DSM2 model by December 1999 for the IEP.

Suisun Marsh Technical Advisory Committee

In 1998, departmental staff facilitated four Suisun Marsh Technical Advisory Committee meetings, which were scheduled quarterly to increase staff time and resource efficiency. Representatives from federal, State, and local agencies attended the meetings. Meeting announcements and summaries were distributed to more than 60 people, including SWRCB staff.

Operation and Maintenance

Suisun Marsh Salinity Control Gates

The Suisun Marsh Salinity Control Gates are operated as needed during the control season (October 1 to May 31) to meet salinity standards and minimize fish concerns related to predation and impedance. To date, the scheduling of control gate operation and the installation or removal of the flashboards have varied because of existing salinity conditions, requests from fisheries agencies for sensitive-species concerns, or to allow for special studies and repairs.

During the 1997-98 control season, the control gates were operated from October 14 through December 3, 1997. Heavy precipitation in December, January, and February lowered salinity throughout the marsh, eliminating gate operations for the rest of the control season. On February 3, 1998, the flashboards were removed due to concerns about marsh flooding. They were not reinstalled until the 1998-99 control season.

Control gates were not needed to meet salinity standards during the first half of the 1998-99 control season. However, the flashboards were installed at the

end of September, and the gates were operated intermittently during October and November as part of a joint study by the Department, USBR, DFG, SRCD, and NMFS to evaluate the use of modified flashboards to promote passage of adult salmon. The operations were timed to coincide with the release of tagged adult salmon over three different time periods. The first period was October 1 to October 12, with the normal flashboard configuration. The second, or base case, phase was October 14 to October 26, when the gates were held open with the flashboards removed. The third period was October 27 to November 12, when the gates were operated with the modified flashboards, which contain installed slots allowing a continuous passage opportunity. The gates were not operated November 13 to the end of the year, although the modified flashboards were left in place to allow for further data collection.

In the course of the adult salmon migration portion of the test, the control gate operational data were closely scrutinized over the October to November study period. It quickly became apparent that the gates were not responding well to opening/closing triggers. The most common problem was late gate openings; however, there were also incidences of late closings, and neither followed any discernible pat-

tern. Since this problem occurred both before and after the modified flashboards were installed, it is believed that the flashboard modification is not the cause of the gate malfunction. This timing problem prompted an investigation into operational procedures, including the proprietary software used to process operational data. The investigation continued through 1998.

Morrow Island Distribution System Maintenance. Maintenance on Morrow Island Distribution System began in 1997. Distribution ditches were dredged, and the spoils were placed on the south levee, including some adjacent wetlands. In 1998, the dried spoils were used to rehabilitate the project levees, which were raised to design height. Project maintenance and on-site mitigation is approximately 90 percent complete.

Roaring River Distribution System Maintenance.

The Roaring River Distribution System was completed and became operational in 1980. Fish screens were installed and tested on two intake culverts in 1980 and on the remaining six culverts in 1983. In 1997, the slide gates on the eight intake culverts were automated to maintain the USFWS 0.2 feet per second fish-screen velocity criteria.

Plan of Protection for Suisun Marsh

The Plan of Protection for Suisun Marsh, published under the requirements of SWRCB Decision 1485, was designed to ensure that D-1485 standards are met. The plan contained a proposal to monitor water quality; develop management plans for managed wetlands; install, in phases, physical facilities to control channel water salinity for interior marsh sloughs; and provide mitigation for construction impacts associated with physical facilities.

The plan also included a programmatic environmental impact report that discussed actions identified in the plan and the effects of each action. According to the plan, the Department and USBR, as lead agencies, would prepare supplemental environmental documentation if new significant impacts were identified during the planning and implementation of subsequent actions.

The Plan of Protection suggested six phases to provide salinity control for the Suisun Marsh. Phase I (Initial Facilities) and Phase II (Suisun Marsh Salinity Control Gates) are complete. In 1990, Phases III and IV, directed at the western Suisun Marsh, were combined and identified as the Western Suisun Marsh Salinity Control Project. Discussions about Phase V, the Grizzly Island Distribution System, were initiated with SRCD in 1993. The Potrero Hills Ditch was identified as Phase VI. In 1995, the Department, USBR, DFG, and SRCD agreed that the additional large-scale facilities in Phases III through VI are not necessary for salinity control in the Suisun Marsh because of the Delta hydrology resulting from implementation of the 1995 Bay-Delta Plan and the effectiveness of the Suisun Marsh Salinity Control Gates. The parties arrived at this decision based on data collection during control gates operation and departmental model studies conducted in support of the 1995 Bay-Delta Plan and EIR for its implementation as described in this section.

In 1998, significant repairs were made to both the intake fish screens and the levee system. In October 1997, a routine inspection of the fish screens revealed an opening 40 feet long by 4 feet deep below the base of the fish-screen structure. In February 1998, floodwaters damaged a significant portion of the levee system. Fourteen sites, about 4 miles total, were damaged and required repair before operating the distribution system.

All environmental documentation required to begin the repairs was obtained by July 1998. The contractor began repair work on the levees and fish screen on August 31 and completed work on September 27. About 32,200 tons of fill material and 5,100 tons of aggregate base were used to restore the levees to pre-flood elevations. The openings below the fish screen structure were repaired using a combination of stone-slope protection, sack gabions and 3-inch rockfill. In addition, the Department's Delta Field Division placed an additional 200 tons of riprap along the waterside bank of the repaired areas to prevent erosion. The total cost of the repairs was approximately \$1.2 million, shared by the Department, DFG, and USBR.

The Department plans to restore the entire RRDS levee system to design specifications. During 1998, surveys of the levee system were conducted and plans and specifications developed for the work. It is anticipated that the maintenance will be conducted during the summer of 1999.

Suisun Marsh Levees

Suisun Marsh Flood Fight and Emergency Repairs

Heavy precipitation, high tides, and low atmospheric pressure during early February 1998 contributed to extensive flooding in Suisun Marsh. SRCD and DFG Grizzly Island reported 29 levee breaks or locations of overtopped levees during early February 1998. The Department and USBR funded repairs of the 11 most significant breaks. The U.S. Army Corps of Engineers repaired four areas, including two breaches and two overtopped areas. The remaining seven sites were repaired under contract with SRCD. The cost for the repairs was approximately \$1.1 million. An Incident Command Center was also estab-

lished at the SRCD office on Grizzly Island to coordinate local flood fight efforts.

One breach repaired by the Corps, San Souci, which repeatedly breached after three attempts to repair it, was left open. One of the overtopped areas experienced subsidence in June and July 1998 and was repaired by the Reclamation District. The Department's Flood Management staff assisted in the wave-wash protection effort during July.

Long-Term Levee Maintenance Options

In February 1998, the Department and USBR emphasized that the emergency levee repairs were in response to extraordinary circumstances and did not constitute a commitment to assume future responsibility for the repair and upkeep of privately owned levees, which is clearly stated in SMPA.

Only a small portion of Suisun Marsh levees are eligible for State funds for flood control projects under the Assembly 360 Delta Flood Protection Program. The Department informed eligible local agencies of the AB 360 program and the application process.

However, the CALFED Bay-Delta Program has established the Suisun Marsh levees sub-team to help decide if, and what portion of, Suisun Marsh levees should be included in the CALFED levees program. The Department's Suisun Marsh Branch staff is participating on the CALFED Levee Investigation Team. Staff completed a preliminary model study to evaluate the potential impacts of unrepaired Suisun Marsh levee breaches on Delta water quality, and reported its findings to CALFED. (See Modeling Support section.)

Monitoring

Comprehensive Review of Suisun Marsh Monitoring Data

SMPA and the Suisun Marsh Monitoring Agreement, which were signed in 1987, outlined a monitoring program for data collection in the Suisun Marsh. The agreements also stipulated that every 5 years a review shall be conducted to assess the effectiveness of the monitoring program in achieving SMPA objectives. This review was not completed in 1992, and a Comprehensive Review of 11 years of data (water

years 1985 to 1995) began in 1996. In addition to assessing the effectiveness of the agreements' actions, the review analyzes data collected by the monitoring program. The monitoring program includes pond water salinity, soil water salinity, and pond stage data from diked, managed wetlands in the marsh. In addition, channel water salinity data from the Suisun Marsh monitoring and compliance stations was used. One task of the monitoring program was to collect data to better understand the relationships between channel water salinity and pond and soil water salinity.

In 1998, the analysis of the data was completed, and an in-house draft circulated for review. The final report, including recommendations for future monitoring, is expected to be released in summer 2000.

Water Quality Monitoring and Compliance

Data on salinity and tide stage are collected from a network of sites in Suisun Marsh channels (Figure 4-2). SWRCB WR 95-6 specified Suisun Marsh channel water salinity standards for seven compliance stations. Four of these—National Steel (S-64), Beldons Landing (S-49), Volanti (S-42) and Sunrise (S-21)—are located within the marsh. A fifth—Collinsville (C-2)—is located in the western Delta. The Department has requested that the two remaining sites located in the western marsh—Morrow Island (S-35) and Ibis (S-97)—be converted to monitoring stations because of the SWP's minimal control of salinity levels at these locations. A variance to allow all compliance stations to test the control gates' modified flashboards has been granted. The variance is effective through May 31, 2001.

Flow monitoring continued at two tributary locations (S-10 and S-16). Data collected at these locations are used as boundary conditions in computer simulation models the Department uses to analyze and forecast salinity levels within the marsh. These modeling studies are used to help determine alternative methods of achieving salinity standards in the marsh during dry periods.

A number of repairs and upgrades were completed during 1998. Discharge monitoring station S-16 (Suisun Creek) was constructed to replace S-15, which was washed away by high floodwaters in Jan-

uary 1997. Major repairs to existing stations included tide-well stabilization and structural repairs to equipment housing units and access features. Other equipment changes included installation of electronic data recorders at S-37, C-2, S-54, and S-16. Tidal stage was added to the data collected at S-4, and site S-90 was deactivated.

Vegetation Monitoring

Under SMPA, the Department and USBR are required to conduct a vegetation survey of the Suisun Marsh every 3 years. In 1997, a 1-year delay was instituted to reevaluate and update the field and imaging methodologies.

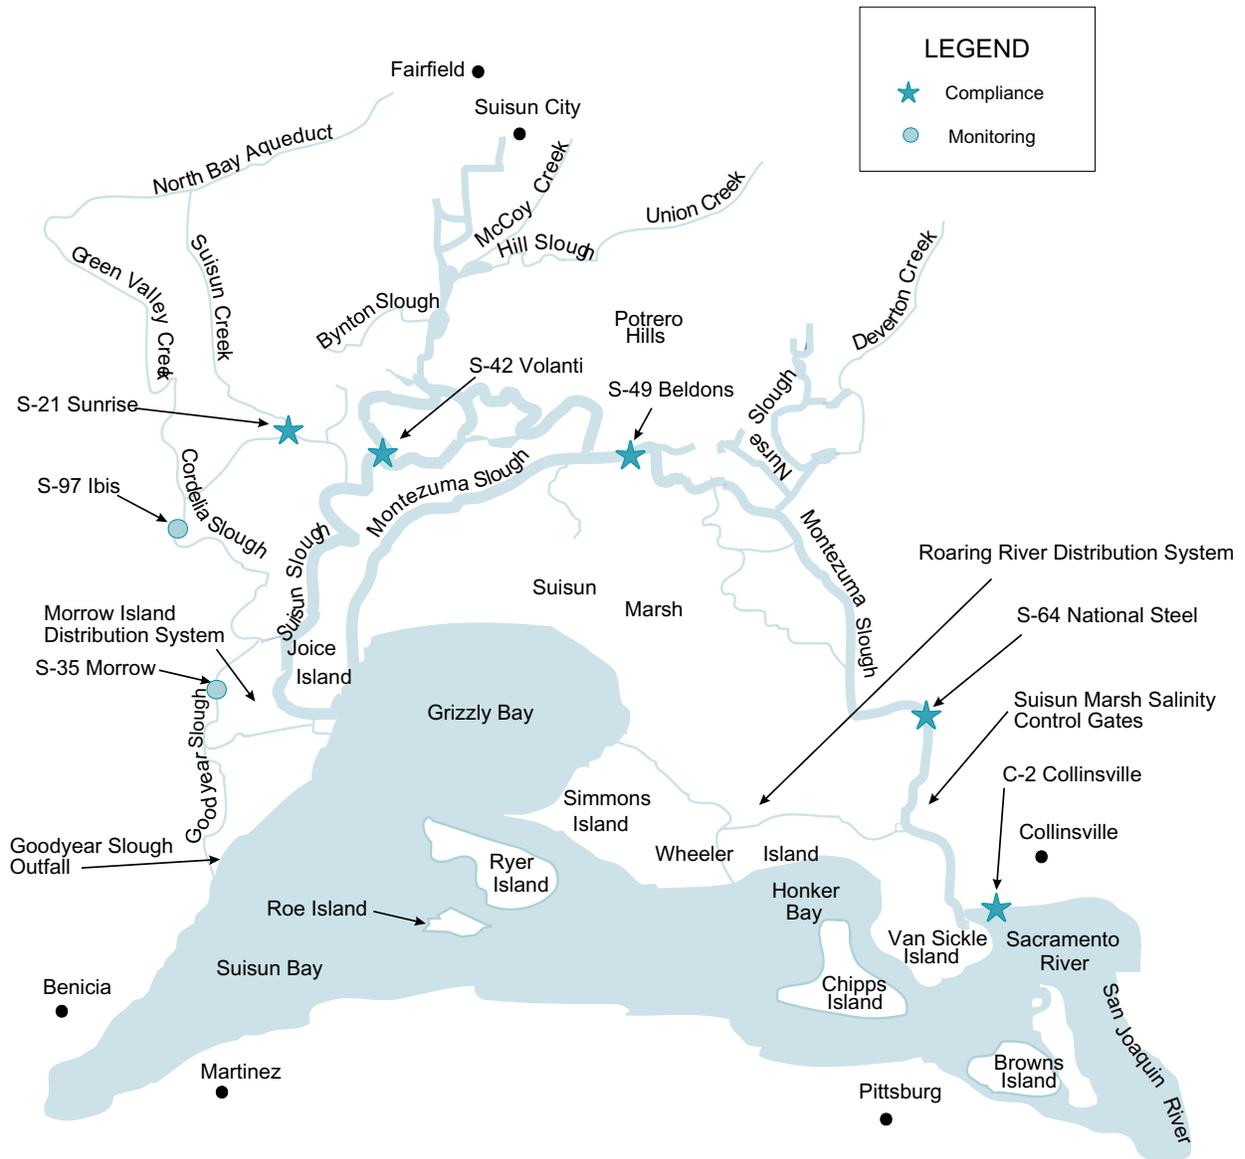

A field reconnaissance was conducted to help develop a new survey methodology, and aerial photos were taken in June 1998. DFG's Wildlife Habitat and Analysis Branch is in the process of preparing a final proposal for a survey methodology. The next vegetation survey is scheduled for summer 1999.

Salt Marsh Harvest Mouse Trapping and Habitat Surveys

In 1981, the U.S. Fish and Wildlife Service issued a Biological Opinion for the Suisun Marsh Plan of Protection. In it, USFWS expressed concern that the implementation of the plan and more intensive management practices on both State and private wetlands could result in the reduction of preferred salt marsh harvest mouse (*Reithrodontomys raviventris halicoides*) habitat. To compensate for this potential loss, the USFWS required the following conservation measures:

- mapping of baseline acreage of preferred salt marsh harvest mouse habitat using the 1981 triennial vegetation survey flight. A change in preferred habitat is considered significant when the acreage decreases by one-third in any of five zones during subsequent flights. If losses are detected, management plans will be modified to assure that substantial tracts of preferred habitat are retained and that any degraded habitat is restored;
- retention and monitoring of at least 2,500 acres of preferred salt marsh harvest mouse habitat adequately distributed throughout the marsh;

Figure 4-2
Compliance and Monitoring Stations in the Suisun Bay and Marsh

- setting aside approximately 1,000 acres of State lands and appropriate portions of future acquisitions to be managed as preferred salt marsh harvest mouse habitat; and
- development of comparable amounts of habitat to compensate for the loss of 340 acres of wetland, including 100 acres of salt marsh harvest mouse habitat. The 100 acres is to be managed as preferred habitat.

To date, a baseline assessment of salt marsh harvest mouse preferred habitat has not been finalized, and the 2,500-acre goal has not been reached. DFG set aside seven areas totaling 1,078 acres, as well as the Peytonia Slough Ecological Reserve (150 acres), as preferred salt marsh harvest mouse habitat in Suisun Marsh.

In 1998, the signatories to SMPA formed an Environmental Coordination Advisory Team to assure future compliance with permit and monitoring requirements. ECAT is working with the USFWS to meet the requirements, and implementation is proceeding.

Monitoring to determine whether the salt marsh harvest mouse is present on the 1,078 acres of mitigation land was conducted in August and September 1998. In addition to the seven set-aside areas, the Peytonia Slough Ecological Reserve was also trapped. One hundred live-traps were set in areas of best available habitat at each of the seven set-aside areas for 3 consecutive nights.

Salt marsh harvest mice were caught at six of the eight areas trapped. Mice were not captured at two tidal areas (Hill Slough East and Joice Island), where the pickleweed habitat appeared to be less than ideal. Mouse populations on Grizzly Island were lower in 1998 than in previous years. This may be due, in part, to the 1998 flood event.

Suisun Marsh Waterfowl Feeding Ecology Study

The second and final field season of the Suisun Marsh Feeding Ecology Study was completed December 31, 1998. A total of 115 birds was collected, including 49 mallards, 34 northern pintails, and 22 green-winged teal. Habitat data were collected from 20 different feeding sites throughout the

marsh. Members of 24 privately-owned managed wetlands in the marsh contributed esophagi from their birds. More than 200 samples were turned in from the private clubs. In addition, esophageal collection began at the DFG Grizzly Island check station. Hunters on DFG ponds proved to be very cooperative and contributed more than 350 additional samples to the study. In 1997, 118 birds were collected: 52 mallards, 45 northern pintails, and 21 green-winged teal. Eighteen duck clubs from throughout the marsh contributed more than 200 samples. Habitat data were collected from 26 feeding sites.

Laboratory work at the University of California at Davis is in progress. Esophageal contents from the 1997 collected birds and approximately half of the 1997 contributed club birds were sorted, dried, weighed, summarized, and analyzed. Due to time constraints, feeding-site core samples from all 26 of the 1997 feeding sites were subsampled and analyzed to determine necessary subsample sizes. Laboratory sorting and analysis will continue until the final report is issued in fall 1999.

Fish and Aquatic Species Monitoring

During 1998, the Department contracted with UC Davis and DFG to conduct fisheries monitoring in Suisun Marsh. The monitoring was conducted to meet the Corps and San Francisco Bay Conservation and Development Commission permit requirements for construction and operation of the Suisun Marsh control gates.

UC Davis has sampled for fish in Suisun Marsh since 1979, with Department and USBR funding. During 1998, sampling continued as in previous years. Results from 1998 sampling will be available by spring 1999. Data from the 1997 sampling indicate that the long-term population fluctuates at lower abundances. The decline seems independent of the control gate operation. Since 1988, introduced species have dominated the fisheries community. The presence of eggs and larvae of Delta smelt and long-fin smelt indicates that these species used the marsh for spawning and rearing in 1994-97; however, split-tail larvae were only captured in 1995 and 1996.

DFG has monitored *Neomysis mercedis* densities and chlorophyll *a* concentration, an indicator of phytoplankton abundance, in the marsh since the late 1970s. In 1997, *N. mercedis* and chlorophyll *a* sampling was conducted monthly throughout the year. *N. mercedis* has been declining in Suisun Marsh since the 1970s, with the most dramatic decreases evident after 1991. In 1997, abundance continued at lower levels. Food limitation, caused by reduced phytoplankton abundance, is the most probable cause for the decline. Overall, chlorophyll *a* concentration has decreased in Suisun Marsh since 1987. The decline has been attributed to the presence of *Potamocorbula amurensis* and to decreases in freshwater flows during drought years. In 1997, chlorophyll *a* concentrations were low, at similar levels to 1996. Construction and operation of the control gates does not appear to have further decreased chlorophyll *a* levels. Results from 1998 sampling are expected to be available in mid-1999.

DFG biologists conducted striped bass egg and larva sampling in Suisun Marsh from 1984-88 and from 1993-95. From 1984-88 (before the control gates were installed), striped bass eggs and larvae in Montezuma Slough comprised 0.04 to 0.20 percent of the total eggs and larvae in the Delta. In 1994, abundance in Montezuma Slough comprised 0.28 percent of total egg and larval abundance in the Delta, similar to levels seen in years prior to installation of the control gates. Larvae collected in 1995 were not measured; consequently, biologists could not calculate abundance indexes. Based on the limited data available, it appears that the gates are not affecting striped bass egg and larval development in Suisun Marsh.

DFG researchers also conduct sampling for juvenile striped bass (defined as fish with mean length from 17.8 mm to 38.1 mm) in Suisun Marsh. In 1997, abundance in Montezuma Slough was the lowest measured in the last 10 years. A gradual decrease in the average abundance has been observed in the Delta and Montezuma Slough since sampling began in 1959. Since the decrease has been relatively constant over the last 30 years, it is unlikely that changes in abundance were due to installation and operation of the control gates.

Mitigation and Fulfillment of Permit Conditions

Suisun Marsh Salinity Control Gates Flashboard Study

In 1993, the Department convened a technical advisory group of interagency biologists referred to as the SMSCG Steering Group. The group, consisting of biologists from the Department, DFG, USBR, the Corps, NMFS, USFWS, and SRCD, is charged with recommending, designing, and reviewing monitoring studies and results to ensure that the Department and USBR meet the Corps' permit requirements for control gate operations. In 1998, the SMSCG Steering Group developed a recommendation to minimize the delay/blockage for adult salmon at the gates, while continuing to meet channel water salinity standards in Suisun Marsh. The recommendation was based on results from the 1993 and 1994 Adult Salmon Migration Studies, a population level evaluation of the potential impacts of gate operation, and the Adult Salmon Passage Mitigation Report that proposes several ways to minimize delays at the control gates.

The SMSCG Steering Group evaluated the measures to minimize delays for adult salmon passage based on their impacts to salinity and their probability of increasing salmon passage. The group chose to install a dual 3-foot horizontal slot in the flashboard portion of the structure. A 3-year study was designed to evaluate the effectiveness of the slots at providing passage for adult salmon and resulting changes in salinity. The first year of the study began in the fall of 1998. An interim report is expected in 1999. Eventually, fisheries and salinity data from all 3 years of the program will be evaluated by the SMSCG Steering Group to determine whether the modification is a success.

Morrow Island Distribution System Maintenance Project

Two primary mitigation measures were required under the conditions of the permit for the MIDS project. These requirements are:

- establishment of 57 acres of salt marsh harvest mouse habitat to mitigate for approximately

- 19 acres of habitat temporarily disturbed during maintenance; and
- installation of a fish screen at the intake of the distribution system to mitigate the impacts on Delta smelt during the project and reduce impacts on that species during future system operations.

The off-site mitigation area has been located and approved by the Department, DFG, the Corps, and USFWS. The mitigation area was proposed to ECAT in 1998; ECAT is expected to approve it in 1999. Fifty-seven acres of salt marsh harvest mouse habitat will be created on the Island Slough property, in addition to the 100 acres that are currently being created.

Reports

In 1998, the following reports on the Suisun Marsh were written or published.

- *Suisun Marsh Annual Data Summary Reports. The Annual Data Summary Reports* for water years 1995 and 1996 were released in 1998. The reports review information collected during channel water salinity monitoring, waterfowl surveys, salt marsh harvest mouse surveys, and fish studies. The 1995 report includes the results of the 1994-95 Western Suisun Marsh Salinity Control Test. The results of monitoring activities in the marsh during water year 1997 are expected to be available in spring 1999. The report format will be revised from previous years. Most of the background information, such as legislative history and general Suisun Marsh hydrology, will be removed and placed in a separate document entitled *Suisun Marsh Monitoring Program Data Summary Report Reference Guide*. The *Reference Guide* will provide comprehensive background information on the Department's Suisun Marsh monitoring program. This document is referenced in the *Annual Data Summary Report* and will be available on the Internet or by request. The intent is to streamline the report preparation process for future years. The *Reference Guide* will be available concurrently with the data report.
- *Suisun Marsh Salinity Control Gates Fisheries Monitoring Annual Report*. The *Suisun Marsh*

Salinity Control Gates Fisheries Monitoring Annual Reports for water years 1996 and 1997 are in preparation and due to be released soon. Both reports should be released by summer 1999.

- *Draft Environmental Assessment/Initial Study for Amendment Three to the SMPA* (June 1998).
- *Suisun Marsh 73-Year Model Study in Support of SWRCB Draft EIR for Implementing the Water Quality Control Plan of the San Francisco/Sacramento-San Joaquin Delta Estuary* (November 1997).
- *Demonstration Document: SMPA Amendment Three Actions as a Means to Provide Equivalent or Better Protection at Suisun Marsh Stations S-35 and S-97* (April 1998). The purpose of the Demonstration Document was to demonstrate that the management actions in the proposed SMPA Amendment Three would provide equivalent or better protection than the channel water salinity standards for western Suisun Marsh stations S-35 and S-97 specified in the SWRCB 1995 Bay/Delta Plan.

Suisun Marsh Expenditure History

Table 4-2 summarizes Suisun Marsh expenditures and reimbursements administered by the Department for calendar years 1968 through September 1998.

From 1968 through September 1998, the Department disbursed more than \$85 million of SWP funds for planning, design, environmental documentation, construction, maintenance, monitoring, mitigation, and permit compliance in support of implementing the Plan of Protection for the Suisun Marsh and SMPA, and meeting standards set by SWRCB. USBR has reimbursed the Department about \$32.8 million (39.1 percent), and the California General Fund has reimbursed about \$9.5 million (11.3 percent). These figures do not include up-front payments made by USBR for staff and other direct costs, as well as about \$5.7 million in USBR interest payments during 1988 and 1989.

Annual figures are reported in Table 4-2 for the Department's upfront and cumulative payments, USBR reimbursements, and general fund reimbursements.

Table 4-2
Suisun Marsh Expenditures and Reimbursements, as of September 30, 1998
(in dollars)

<i>Calendar Year</i>	<i>Upfront Payment</i>	<i>USBR Reimbursement</i>	<i>General Fund Reimbursement</i>	<i>Cumulative Expenditure Balance (CXB)^a</i>

1998	5,426,979	1,107,501	0	43,491,564
Total	85,811,447^e	32,841,883^{e, f}	\$9,478,000^g	43,491,564^h

^a CXB = (previous year's CXB + departmental upfront payment) - (USBR + General Fund Reimbursements)
^b USBR paid an additional \$5,111,831 as interest in 1988, not shown in the table.
^c USBR paid an additional \$607,175 as interest in 1989, not shown in the table.
^d Under State Assembly Bill 1442, the General Fund paid 20% of the Department's upfront payment through June 1988, amounting to \$9,478,000. This payment includes \$6,643,600 for recreation project purpose share of 14%.
^e Does not include USBR upfront payments for staff and other direct costs.
^f USBR paid 39.4% of the total departmental upfront payment.
^g General Fund paid 11.8% of the total departmental upfront payment.
^h The Department paid 48.7% of the total departmental upfront payment.

Information in this chapter was contributed by the Environmental Services Office, the Division of Operations and Maintenance, and the Division of Planning and Local Assistance.

Chapter 5
**Local Assistance
Programs**

Watering of crops

Significant Events

- The Agricultural Water Management Council grew to 39 member agencies serving 3.3 million irrigated acres. The Department is a signatory to the Memorandum of Understanding that created the council.
- The Department's California Irrigation Management Information System expanded to 98 weather stations in 1998 and data was placed on the Internet.
- The passage of the Safe, Clean, Reliable Water Supply Act of 1996 (Proposition 204) provided funding for water conservation, groundwater recharge, new local water supply, and local projects programs that assist local agencies, including State Water Project contractors.
- In late 1996, the San Joaquin Valley Drainage Implementation Program in cooperation with local entities and the University of California began implementation of an Action Plan that updates the 1990 Drainage Management Plan (nicknamed Rainbow Report due to the color of its cover). In 1998, the SJVDIP continued to work with University scientists and local districts on eight technical reports and three local district reports evaluating drainage management options. The local reports identify local projects to resolve drainage problems. The 1996 Act also provided funding for drainage reuse projects.
- The Department supported the development of a training program to certify urban water conservation specialists. The first classes and certification tests will be held in January 1999.
- The *Water Conservation News* continued to be the primary water conservation outreach newsletter.

Through the Division of Planning and Local Assistance, the Department of Water Resources manages Water Use Efficiency, the Davis-Grunsky Act, Agricultural Drainage, Environmental Impact Document Review, and Water Conservation Bond Law programs and participates in several other programs that assist local agencies and benefit State Water Project contractors.

Davis-Grunsky Act Program

The Davis-Grunsky Act, authorized in 1960 as part of the Burns-Porter Act, provides construction loans for local domestic water projects and agricultural water conservation projects. It provides grants for recreation and fish and wildlife enhancement. Loans and grants may also be given to rehabilitate a dam and reservoir.

The Department's ongoing administration of the program provides oversight of the 32 recreation grant projects to ensure compliance with the contracts. Administration costs are recovered from the revenues provided by the repayment of Davis-Grunsky loans. The recreation grant contracts are being amended to reflect actual facilities constructed and the modification of the Department's function of fee oversight.

In this reporting period, the Davis-Grunsky Act Program funded two activities:

Big Bear Municipal Water District. Phase II repairs of Bear Valley Dam, San Bernardino County, continued to await the California Department of Transportation's actions to construct the required replacement road downstream of the dam. The \$380,000 of Davis-Grunsky grant contract funds approved for Phase II construction remained available to the district.

Little Rock Creek Irrigation District/Palmdale Water District. The Department's audit and disbursements were completed for the \$3 million grant approved to restore Little Rock Dam and Reservoir in Los Angeles County. The recreational facilities associated with the project are complete.

Water Use Efficiency

The Department's California Irrigation Management Information System expanded to 98 weather stations in 1998 and current data was put on an Internet site. The Department provides reference evapotranspiration information to several local agencies. Requests for information from the CIMIS database and web site numbered more than 5,000 each month.

The Department supported the development of a training program to certify urban water conservation specialists. The American Water Works Association California-Nevada Section is scheduled to present the first classes and certification tests at Conserv 99 in January 1999. As a cosponsor and steering committee member, the Department participated in the preparation of Conserv 99. This prestigious conservation conference, held every 3 years, is scheduled to be in California for the first time. It will be held in Monterey from January 31 to February 3, 1999.

The *Water Conservation News* continued to be the primary water conservation outreach newsletter. The quarterly publication reaches more than 8,000 California subscribers.

Agricultural Drainage Program

The Department continued to participate in the multi-agency San Joaquin Valley Drainage Implementation Program. Four State and four federal agencies sponsor SJVDIP, with the Department as the lead agency. The Department provides management, staff, and contributes funding. During December 1996, the program's Management Group approved in concept a "Proposed Action Plan," which was advanced by an

association of local districts, the University of California, and the California Department of Food and Agriculture. The intent of the Proposed Action Plan is to update the 1990 Management Plan and pursue voluntary implementation of the recommended options. The Action Plan has three stages.

The first stage consisted of two concurrent, coordinated, yet independent tasks. First, subarea committees assessed the feasibility of adopting the management recommendations proposed in the management plan and prepared reports on San Joaquin Valley drainage problem areas. Second, a set of technical committees evaluated the technical and economic management options.

During the second stage, an ad hoc Coordination Committee will synthesize the information from the first stage into a report and, based on technical and economic considerations, identify interactions and trade-offs among management options and develop a set of recommendations. The Technical Committee and subarea reports are expected to be completed by February 1999. The ad hoc Coordination Committee plans to prepare a final report to SJVDIP by January 2000.

The third stage will use the recommendations formulated during the second stage and identify acceptable mechanisms to encourage the adoption and voluntary implementation of the updated management plan.

Shallow water tables, toxic trace elements, and high salinity threaten agricultural productivity and environmental quality. The Department has a responsibility to engage in activities to ameliorate the problems associated with irrigated agriculture. Salinity buildup on the west side and the lower parts of the Sacramento Valley is gradually taking its toll to destroy agricultural lands. The SJVDIP Action Plan and the cooperative effort initiated among the parties are necessary to resolve drainage problems. The Department will participate in this effort, assist the local districts and work with other agencies, and play a major role in collecting necessary data, developing and transferring technologies, identifying research needs, and helping districts and growers implement the drainage management options. Information on SJVDIP and its reports can be found on the Program Internet site

located on the Department's Division of Planning and Local Assistance.

Proposition 204 transferred \$6.1 million from SWRCB to the Department of Food and Agriculture for developing methods of agricultural drainage water reuse. DFA has asked the Department to conduct the necessary studies. The Department expects to complete the interagency contract and begin the work as soon as funding is made available to the Department. This program is closely coordinated with SJVDIP.

Drainage Monitoring and Evaluation

The Department continues to participate in a cooperative program with the U.S. Bureau of Reclamation and the Central Valley Regional Water Quality Control Board. This information system provides local, State, and federal agencies with real-time projected flow and salinity data to assist in managing drainage releases to the San Joaquin River. The initial funding for this program was supplied by USBR. A proposal to CALFED for funds to extend the program 2 years is being developed.

The Department continued to monitor shallow groundwater levels and electrical conductivity data. Each year this data is assembled in an annual report that provides information on shallow groundwater conditions. To help identify problem areas, these reports include contour maps of electrical conductivity and depth to shallow groundwater. The Department collected drainage water flow data and water quality data from about 30 tile drainage system sumps.

The Department continued to provide assistance with monitoring activities for an integrated on-farm drainage management project in western Fresno County. IFDM was developed to investigate and demonstrate salt management of irrigated farmland. The Department collected level and water quality data for shallow groundwater along with volume and water quality data for the irrigation and drainage water.

On-Farm Drainage Reduction and Reuse Program

The Department's On-Farm Drainage Reduction and Reuse Program provides technical assistance, information, and other resources to all growers and

irrigators. The Program helps irrigation districts and growers apply irrigation water efficiently, reducing deep percolation and drainage water from the immediate on-farm source, while providing a sustainable soil environment by maintaining salt balance in the crop root zone.

The program objective is being achieved through on-farm demonstration projects, studies, research, and educational training and workshops. Workshop topics include irrigation scheduling and management, including upgrading, maintenance, operations, and performance, advances in irrigation technology, irrigation system evaluation, drainage reuse, and salinity management. These activities help improve and advance irrigation management, fine tune the performance of irrigation hardware, and increase the educational level of growers and irrigators.

In 1998, final reports focusing on the management of trace elements in Integrated On-Farm Drainage Management Systems were submitted for two projects:

- *Selenium Management in IFDM Systems Through Volatilization*; and
- *Boron Accumulation and Toxicity in IFDM Systems*

Staff is presently involved in two major activities:

- management of six in-progress contracts; and
- work on SJVDIP Activity Plan and technical committees.

Management of Six In-Progress Contracts. In-progress contracts for research and demonstration projects, and contracts for workshops, are designed to disseminate state-of-the-art irrigation technologies and management practices to reduce and manage drainage water. The following contracts were developed from a Request for Proposals process initiated in 1996-97, which was targeted for State water contracts areas. The contracts in-place or under development in 1998 include:

- *Integrated Management of Irrigation and Shallow Groundwater*—field demonstration at Westlake Farms of irrigation management techniques to optimize crop use of shallow groundwater.

- *Lost Hills Drainage Reuse Trial*—a small trial to determine if drainage water can be reused on selected crops, such as pistachios, and incorporated into the District's drainage water management programs.
- *Lost Hills Preirrigation Drainage Reduction*—field demonstration of sprinkler/furrow irrigation management for pre-irrigation drainage reduction.
- *Pond-Shafter-Wasco Mobile Lab*—program to assist growers with irrigation system evaluations to improve distribution uniformity and irrigation efficiency.
- *Pond-Shafter-Wasco Irrigation Training Workshops*—irrigation training workshops conducted in both English and Spanish for growers and field workers.
- *Center for Irrigation Technology Irrigation/Drainage Management Workshops*—training and educational workshops conducted on recent advances in irrigation and drainage management. Conducted at California State University, Fresno.

Work on SJVDIP Activity Plan and Technical Committees. Staff are helping the SJVDIP coordinator execute the Activity Plan update of the 1990 SJVDP Drainage Management Plan (nicknamed Rainbow Report due to the color of its cover). Staff have participated in eight Technical Committees, specifically the Source Reduction Technical Committee and the Drainage Reuse Technical Committee, and contributed to the writing of the committees' reports. Final reports are expected to be issued in early 1999.

Drainage Treatment

The Department continued to investigate technologies to treat agricultural drainage water. Testing at the multiagency Adams Avenue drainage treatment test was completed in November 1995. The principal activity was bacterial selenium reduction/removal tests, using anaerobic sludge blanket reactors, fluidized bed reactors, and a packed bed reactor. Slow sand filtration was evaluated as a final polishing step. Operation data and results were compiled for a summary operations report. Cleanup of the Adams site was completed in November 1998. Removal of the remaining salts and sediments at the

Los Banos Demonstration Desalting Facility was completed in December 1998.

Other activities included investigation of antifouling and antiscaling alternatives for low-pressure reverse osmosis membranes at the University of California at Los Angeles, continued support of a cooperative investigation into the use of wetlands for selenium removal at Tulare Lake Drainage District, investigations of processes for concentrating and purifying drainage salts, and opportunities for marketing harvested salts.

Planned activities include demonstrations in several drainage areas of pilot-scale reverse-osmosis treatment plants for the antifouling and antiscaling alternatives developed at UCLA; demonstration of alternative thermal gradient solar ponds for drainage water concentration, safe storage, and energy production; and field demonstrations of techniques for concentration and harvesting of drainage salts.

Evaporation Ponds

Operators of the agricultural evaporation ponds are operating under the waste-discharge requirements as adopted by the Central Valley Regional Water Quality Control Board in August 1994. Clean wetlands provide compensation for operation of the evaporation ponds; pond management for some systems has changed; and most required structural modifications have been completed at the evaporation basins. Researchers funded through the Department's Evaporation Pond Investigation developed most of these mitigation procedures. As required, the pond operators compiled draft progress reports for the first 3 years of implementation. CVRWQCB has reviewed these reports for adequacy and will prepare modifications to the waste-discharge requirements if needed. The Department will assist CVRWQCB in assessing the biological implications of any proposed modifications.

Petitions filed with the State Water Resources Control Board acted to strengthen the waste discharge requirements of CVRWQCB. SWRCB held hearings on these petitions and remanded the EIRs of four operators back to CVRWQCB for further environmental assessment. One operator has since settled outstanding issues and the other three agreed with the

CVRWQCB to rewrite their EIRS. Administrative drafts of the EIRs have been completed and reviewed by the operators. CVRWQCB requested the Department's assistance in reviewing the comments of the operators along with input from California Department of Fish and Game and the U.S. Fish and Wildlife Service. This process is continuing and public drafts of the EIRs should be released in 1999.

The Department continues to fund and coordinate research on the evaporation ponds. A study by the Biological Resource Division to analyze shorebird feeding behavior has been completed and a final report is due in the summer of 1999.

The Department continues its studies at Rainbow Ranch evaporation basin in Kern County. Based on studies that the Department and USFWS conducted in the past, a relationship between water-borne selenium and selenium concentrations found in eggs was described for the evaporation basins. For the last few years, the selenium levels in shore bird eggs at Rainbow Ranch were lower than expected. Initial studies determined that, at times, the cells of these develop both thermal and salinity stratifications. The stratification of the ponds may be associated with the low levels of egg selenium. The linkage to egg selenium levels and the conditions that result in stratification remains to be determined.

Environmental Impact Documents Review

The Environmental Review Section in the Division of Planning and Local Assistance screens State Clearinghouse documents and circulates SWP-related materials for review by the Department's four districts, as well as the divisions of Planning and Local Assistance, Operations and Maintenance, and Engineering. In addition, other divisions and offices are notified of activities and are requested to comment when their expertise is required.

Some environmental impact documents handled by the State Clearinghouse concern proposed activities that would affect the SWP. State Clearinghouse documents are regularly reviewed to identify any public safety or liability issues arising from the proposed activities.

From January through December 1998, about 2,900 documents were screened by the Environmental Review section, with 368 referred for detailed review. O&M received 80 of these referrals. The State Water Project Analysis Office received 15 referrals, and the Office of State Water Project Planning received 1. In addition to formal referrals, 316 informal referrals were made to departmental staff. These documents were referred to staff for information rather than comment, with some of the documents formally referred to other departmental staff.

Of the documents submitted for formal review, about 15 percent generated written comments that were submitted to the lead agency. They included safety and water supply issues, encroachment on physical facilities, and water quality issues. Additional departmental actions involving such items as encroachment permit submittals and informal comments took place, but cannot be tracked by the Environmental Review Section.

Since 1995, weekly summary reports on documents received from the State Clearinghouse are available by e-mail, increasing the report's availability and speed of distribution. About 115 requests from departmental staff during 1998 were related to the distribution of this document. In addition, Environmental Review Section staff filled three requests from SWP contractors.

During 1998, the Environmental Review Section tracked documents related to development along the California Aqueduct, water transfers, and wastewater treatment in the Delta.

Water Conservation Bond Laws

To assist local agencies in obtaining financing for their water management programs, California voters approved four bond laws between 1984 and 1996 that authorized the Department to provide low interest loans and grants to fund project feasibility studies or construction activities.

The Clean Water Bond Law of 1984 (Proposition 25) authorized \$10.5 million for water conservation projects; the Water Conservation and Water Quality Bond Law of 1986 (Proposition 44) authorized

\$75 million for water conservation and groundwater recharge projects; the Water Conservation Bond Law of 1988 (Proposition 82) authorized \$60 million for water conservation, groundwater recharge, and new local water supply improvements; the Safe, Clean, Reliable Water Supply Act authorized \$55 million for water conservation, groundwater recharge, and local water supply projects. The Act also authorized about \$6 million for Department of Food and Agriculture for drainage reuse studies and programs. Since then, DFA has requested the Department to administer the \$6 million and conduct the necessary projects. In 1998, planning was underway to begin the transfer of funds to the Department.

Construction loans are available for up to \$5 million per project, with repayment up to 20 years at reduced interest rates for most programs. Proposition 204 provided grants for local water supply feasibility studies and a single construction grant for a groundwater recharge project. Among other approval criteria, applicants for this funding must demonstrate that project benefits exceed project costs. Typical projects fall under the following three categories:

Water Conservation

- improvements to, or replacement of, distribution and storage systems;
- lining and piping ditches;
- water meters; and
- water recycling distribution systems.

Groundwater Recharge

- land and facilities for new artificial groundwater recharge; and
- expansion of existing artificial groundwater recharge facilities.

Local Water Supply/Local Projects

- new conveyance and/or storage facilities;
- groundwater recharge extraction facilities, well-field development; and
- desalination (ocean or brackish groundwater recovery).

Table 5-1, organized by project type, summarizes the number of projects and funds committed for each of the four bond laws.

Table 5-1
Water Conservation Bond Laws Projects and Funding
(Millions of Dollars)

<i>Bond Law</i>	<i>Type of Project</i>	<i>Number of Projects^a</i>	<i>Funding^a</i>
Clean Water Bond Law of 1984	Water Conservation	7	9.70
Water Conservation/Water Quality Bond Law of 1986	Water Conservation	23	38.60
	Groundwater Recharge	10	28.00
	<i>Subtotal</i>	33	66.60
Water Conservation Bond Law of 1988	Water Conservation	6	13.50
	Groundwater Recharge	8	24.30
	Local Water Supply	4	9.00

the Division of Planning and Local Assistance.

Chapter 6

Legislation and Litigation

Governor's Office, early 1900s

Significant Events

- SB 1765 (Peace) Colorado River Management Program (Chapter 813, Statutes of 1998) appropriates a total of \$235.3 million: \$235 million to the Department of Water Resources for implementation of the California 4.4 Plan developed by the Colorado River Board, and \$300,000 to the Salton Sea Authority for a study. Of these funds, \$200 million is for lining the All American Canal and the Coachella Branch of the All American Canal by December 31, 2006; \$35 million is to finance the installation of recharge, extraction, and distribution facilities for groundwater conjunctive use programs necessary to implement the 4.4 Plan.
- SB 1075 (Johnston) Delta Protection Commission (Chapter 584, Statutes of 1998) extends the Delta Protection Commission to January 1, 2010, and authorizes the commission to facilitate the implementation of any joint habitat-restoration programs within the primary zone of the Delta.

The Department of Water Resources' Assistant Director for Legislation monitors State and federal legislation introduced or enacted, including bills or laws that could impact the State Water Project. Similarly, the Office of the Chief Counsel tracks litigation of potential significance to the SWP and manages litigation involving SWP operations.

Legislation

SB 1765 (Peace) Colorado River Management Program (Chapter 813, Statutes of 1998)

SB 1765 appropriates a total of \$235.3 million: \$235 million to the Department for implementation of the California 4.4 Plan developed by the Colorado River Board and \$300,000 to the Salton Sea Authority for a study. Of these funds, \$200 million is for lining the All American Canal and the Coachella Branch of the All American Canal by December 31, 2006; \$35 million is to finance the installation of recharge, extraction and distribution facilities for groundwater conjunctive use programs necessary to implement the 4.4 Plan. The lining of the canal is contingent upon the following: (1) completion of a study of seepage and subsurface inflows to the Salton Sea from the All American Canal and the Coachella Branch of the Canal; (2) completion of environmental documentation and permits required by the California Environmental Quality Act and the National Environmental Policy Act for the lining of the canals; and (3) a finding by the Director of the Department of Fish and Game that the canal lining avoids or mitigates impacts on the fisheries and other wildlife.

SB 1075 (Johnston) Delta Protection Commission (Chapter 584, Statutes of 1998)

SB 1075 extends the Delta Protection Commission to January 1, 2010, and authorizes the commission to facilitate the implementation of any joint habitat-restoration programs within the primary zone of the Delta.

Litigation

As of December 31, 1998, the Department was involved in a number of court cases related to management of the SWP. In addition, the Department monitored other cases that could significantly impact management of the SWP.

San Luis and Delta-Mendota Water Authority v. United States, et al.

On November 12, 1997, the San Luis and Delta-Mendota Water Authority filed a lawsuit in federal district court for injunctive relief against the United States for misinterpretation and misapplication of the Central Valley Project Improvement Act. The plaintiffs have challenged the legality of the U.S. Department of the Interior's November 20, 1997, *CVPIA Final Administrative Proposal on Management of Section 3406(b)(2) Water*, in which DOI sets forth its plan for implementing the so-called "(b)(2)" section of the CVPIA. The water districts claim that the administrative proposal fails to account for the water as required by the CVPIA and is subject to NEPA. In contrast, environmental groups also filed a lawsuit against the United States, claiming that the proposal fails to properly account for the water, that the proposal fails to dedicate sufficient water to implement (b)(2), and that the U.S. misinterpreted its authority in permitting reuse of CVP yield. The two cases have been consolidated. In November 1998, plaintiffs submitted motions for partial summary judgement in preparation for a hearing January 1999.

Planning and Conservation League, Plumas County, and Santa Barbara Citizens Planning Association of Santa Barbara County v. Department of Water Resources and Central Coast Water Authority

The Planning and Conservation League filed a lawsuit on December 27, 1995, against the Department and Central Coast Water Authority, challenging CEQA compliance for the Monterey Amendment. PCL amended the complaint February 13, 1996, alleging that the Department could not legally transfer the Kern Water Bank to Kern County Water Agency as part of the Monterey Amendment.

After a hearing held May 17, 1996, a Sacramento County Superior Court judge ruled in favor of the Department and CCWA on PCL's complaint and dismissed the lawsuit. With regard to the CEQA causes of action, the court ruled that the Department should have served as lead agency, but that this was a harmless error, not requiring the preparation of a new environmental impact report. The court also ruled that PCL had failed to join indispensable parties in the lawsuit, including Metropolitan Water District of Southern California and KCWA, in its cause of action to enjoin the transfer of the KWB. On August 15, 1996, judgment was entered in favor of the Department and CCWA.

PCL appealed the decision to the Third District Court of Appeal. The appeal addresses whether the Superior Court correctly ruled that the SWP contractors are indispensable parties and whether CEQA was complied with. Briefing is complete and the parties await the Court of Appeal's decision.

Southern California Bass Council, et al. v. State of California

In late November 1994, the Southern California Bass Council, the Sierra Club, and the Audubon Society filed a CEQA lawsuit against the Department, challenging the Department's Mitigated Negative Declaration prepared for the reconstruction of the intake tower at Silverwood Lake. The Department was directed by the Federal Energy Regulatory Commission to replace the existing intake tower to the San Bernardino Tunnel because the existing tower did not meet current seismic standards. The petitioners claimed the Department's environmental documenta-

tion did not provide sufficient mitigation for adverse effects on the environment, including impacts on fisheries and the bald eagle.

At an April 1995 hearing in San Bernardino Superior Court, Judge John Kennedy, Jr., ruled that the Department's mitigation measures were indeed sufficient to minimize any significant impacts on the environment. The ruling validated the Department's plans to mitigate possible adverse effects on fish and wildlife resources, including the bald eagle, and recreation at the lake.

In June 1995, the petitioners appealed the trial court judgment. No order for stay (to prevent work from proceeding) was filed, and construction at Silverwood began in September 1995. Work on replacement of the intake tower was substantially completed by May 1997, and the lake was returned to its pre-project level.

On October 17, 1996, the Court of Appeal affirmed the Mitigated Negative Declaration in all respects but one. As to fishery mitigation, the appellate court held that the Mitigated Negative Declaration should have included either a commitment to the specific nature and extent of restocking the fishery or specific standards under which the Department and the California Department of Fish and Game would determine the nature and extent of restocking.

Petitioners then filed a petition for review with the California Supreme Court seeking to invalidate the entire Mitigated Negative Declaration. On January 22, 1997, the California Supreme Court denied the petition for review, and jurisdiction was returned to the Superior Court. A hearing was held in San Bernardino Superior Court on May 2, 1997, and the Department presented its Fishery Mitigation Plan. Further briefing occurred on the merits of the plan, and oral argument was postponed to January 30, 1998.

On January 30, 1998, the parties appeared in San Bernardino Superior Court for a hearing on remand from the Court of Appeal. Judge Kennedy approved the Department's fishery mitigation plan as providing sufficient performance criteria for mitigating the project's significant effects on the fishery at Silverwood. The original mitigation plan included three

primary mitigation measures: (1) fish macro and micro habitat enhancement; (2) fish population studies through the year 2001; and (3) a one-time fish stocking if the fishery has not recovered by the end of 2001. On June 5, 1998, the court awarded plaintiffs fees and costs in the sum of \$146,488. The court further ordered the Department to file a mitigation status report on January 15, 1999, and for the parties to present oral argument.

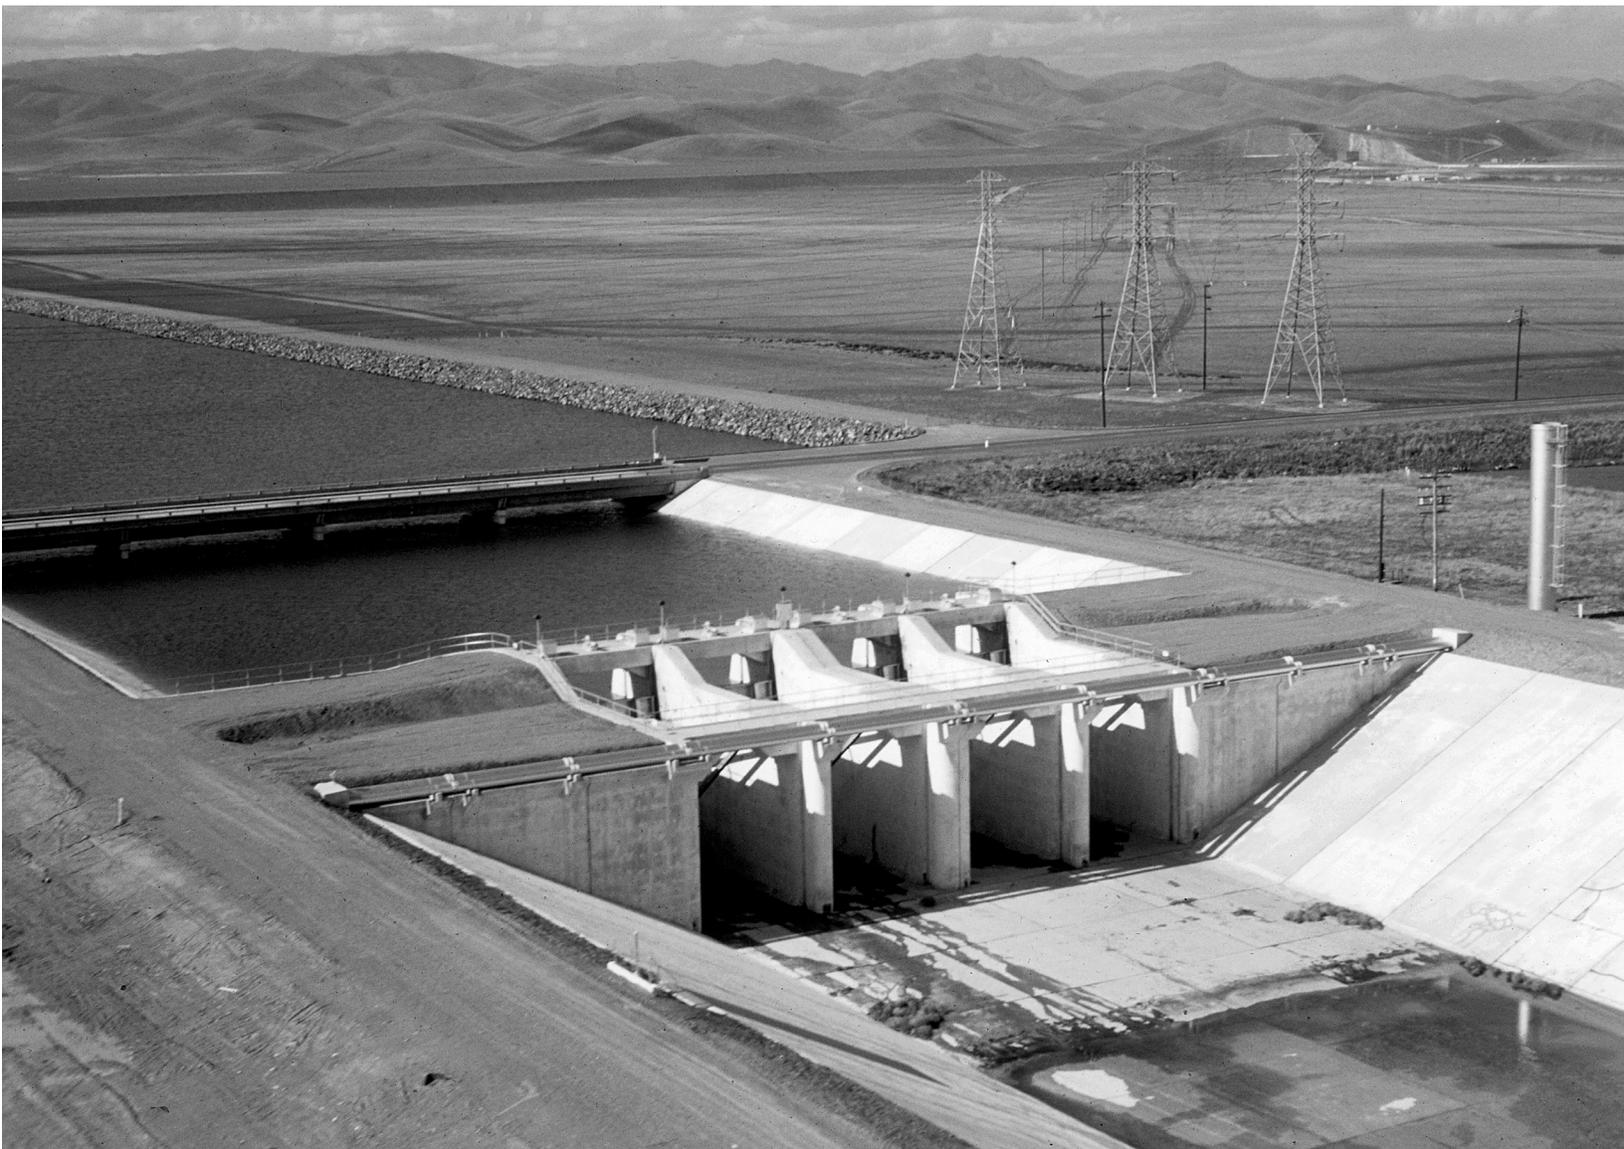

City of Barstow v. City of Adelanto

This action is a stream/groundwater adjudication for the Mojave River Basin. The groundwater adjudication portion of the litigation, to which the Department is not a party, is now before the California Supreme Court, after the trial court decision upholding the negotiated settlement was reversed by the Fourth District Court of Appeal on June 1, 1998.

Information for this chapter was contributed by the Assistant Director for Legislation and the Office of the Chief Counsel.

Chapter 7

Storage and Delivery Capabilities and Water Supply Development

Water control gates prior to water release at O'Neill Forebay

Significant Events

- The State Water Resources Control Board began public hearings on July 1, 1988, to consider alternatives to implement the water quality objectives in the 1995 Water Quality Control Plan. As of December 21, 1998, the board heard 40 days of testimony, and phases 1 through 5 were completed.

To deliver the full annual water entitlements specified in water service contracts, the Department of Water Resources will need to construct additional storage and delivery facilities as part of the State Water Project, as well as maintain and improve the reliability of all SWP supplies. However, finding environmentally and technically suitable projects and satisfying many complex environmental procedures, laws, and regulations, present two significant challenges in the planning and developing of new facilities. Many environmental concerns center on the effects that additional storage and delivery facilities may have on the water quality and environment of the Sacramento-San Joaquin Delta. The Delta is the critical link in the SWP conveyance system. As such, developing additional SWP facilities depends on resolution of Delta conflicts and solutions currently being outlined by CALFED.

In 1995, the CALFED Bay-Delta Program began developing a comprehensive, long-term solution for the Delta. The program is a component of a process defined in the State-federal framework agreement signed in June 1994. This agreement calls for a cooperative and coordinated process to solve long-term water quality and ecosystem problems in the Bay-Delta Estuary. The signers of the agreement, known collectively as CALFED, became responsible for setting water quality standards and developing long-term solutions for fish and wildlife, water supply reliability, flood control, and water quality problems in the estuary.

The Department has vigorously supported this effort as a means of developing and managing the State's water resources to benefit its citizens and the environment and to meet the water delivery commitments of the SWP. The Department is also developing a planning strategy for the SWP to lay the groundwork for the development of additional SWP water supplies. The progress of the planning strategy depends on the evolution of the CALFED Bay-Delta Program and the support of SWP contractors.

SWP Planning Strategy

Because of the need for additional water supplies for the SWP, along with the impacts of new constraints

on Delta exports, the Department initiated efforts in 1994 to formulate a new planning strategy for the SWP Future Water Supply Program. The Department held initial meetings with all interested SWP contractors to discuss regional water management issues, requirements for SWP supply reliability, and strategies for implementing new demand reduction and supply development projects.

The end product of the SWP planning strategy may be a detailed plan comprised of water-demand reduction and supply-enhancement programs and their implementation schedules, or a general plan recommending a framework of options for SWP contractors. The plan would specify how the SWP would meet interim (10-year planning horizon) and long-term (year 2020 and beyond) water demands of SWP service areas, according to service-area-specific ranges of desired reliability.

Supply Reliability Activities

Increased emphasis was given to maintain and improve the reliability of future SWP supplies. These activities formed the core of the SWP planning strategy.

Transfer and Exchange Evaluations

The evaluation of the effects of proposed non-SWP water transfers on the SWP was done in cooperation with the State Water Project Analysis Office, Operations and Maintenance, and the Office of the Chief Counsel. This team developed formal responses on specific issues or programs. Coordination of this effort in the Office of SWP Planning ensured timely identification and evaluation of significant projects. The team identified and evaluated water transfer proposals, water acquisitions by the U.S. Bureau of Reclamation and other water agencies, and proposed water-right settlement agreements for potential impacts to the SWP. Emphasis on early intervention tailored the proposals so as to minimize adverse effects or maximize benefits to the SWP. The team monitored the USBR contract renewal process to evaluate potential impacts. These activities helped the Department to understand the potential cumulative impacts of other agencies' actions on the SWP and to proactively address these impacts.

The team also explored potential transfer options available to the SWP and individual contractors. Analysis of contractor profiles helped the Department facilitate transfers and exchanges between individual contractors. In addition, the Department coordinated its participation on the CALFED Transfer Agency Group and the Bay-Delta Advisory Committee Transfers Workgroup.

Water Supply Contract Evaluation

This activity focused on evaluating existing SWP water supply contracts to identify possible modifications to improve reliability. Contract amendments were developed to increase flexibility for individual contractors while protecting the water supply of other contractors. Potential operational changes to increase flexibility will be evaluated.

Contractor Profiles

The SWP Planning Committee developed preliminary contractor profiles. These profiles provide data on contractors who want to develop additional future SWP supplies. The Committee worked with individual contractors to determine specific water supply needs and identify potential programs and/or operational changes to meet those needs in a cost-effective manner.

Assurance Demonstration Project

This continuing effort developed, in coordination with CALFED, a conjunctive-use project to identify and implement locally acceptable assurances that significant third-party impacts can be mitigated. This project augmented the ongoing Sacramento Valley Conjunctive-Use Study.

Watershed Management

This effort, which evaluated the state of the Feather River watershed above Lake Oroville, identified actions that can be taken within the watershed to increase base-flow runoff and reduce sedimentation. The effort explored ways to improve local water supplies without adversely affecting SWP supply or operations. Initial activities included installing monitoring equipment and gathering pertinent data on streamflows, water quality, erosion, and land use. The work gained strong local support.

SWP Bay-Delta Proceedings—1998 Activities

The current Bay-Delta Water Rights hearing is the latest in a series of hearings over the past 30 years before the State Water Resources Control Board to establish water quality objectives in the Delta to protect urban, agricultural, and fish and wildlife water uses. In 1995, SWRCB issued a water quality plan for the Delta. The plan would implement water quality flow objectives in the Delta, objectives for the Suisun Marsh, salinity-control actions in the San Joaquin Basin, objectives for the south Delta, including dissolved oxygen objectives, and combined use of SWP and Central Valley Project points of diversion in the Delta. The current version of the Bay-Delta Water Rights concerns the implementation of the 1995 plan through a water right hearing.

SWRCB elected to stage the hearing in nine phases. The hearing began on July 1, 1998. As of December 31, 1998, SWRCB heard 40 days of testimony, and phases 1 through 5 were completed.

In Phase 1, SWRCB heard testimony to decide whether to extend Water Rights Order 95-6. WR 95-6 modified SWP and CVP rights expressed in Decision 1485 to make them consistent with the 1995 plan.

Phase 2 of the hearing addressed whether the San Joaquin River Agreement was a reasonable alternative for meeting the Vernalis flow and salinity

objectives. SWRCB determined that the agreement was a reasonable alternative, and that it would be compared to other Vernalis alternatives described in the draft EIR in Phase 2a.

Phase 3 of the hearing addressed the Suisun Marsh objectives. The Department, in coordination with the Department of Fish and Game and the Suisun Resource Conservation District, presented evidence in support of an amendment to the Suisun Marsh Preservation Agreement. This amendment would satisfy the projects' obligations for meeting the Suisun Marsh objectives.

Phase 4, also completed, addressed agreements involving the Mokelumne River, Putah Creek, Cache Creek, and North Delta Water Agency. The Department presented evidence in support of each of the settlements.

Phase 5 addressed south Delta agricultural objectives and the dissolved oxygen objectives for the San Joaquin River near the City of Stockton. The Department presented evidence in support of the Interim South Delta Program, which contains, as a component, the installation and operation of permanent barriers in the south Delta. The Department has proposed that this program would satisfy the Department's obligations to meet south Delta objectives. The program would improve water circulation and water levels in the south Delta.

SWRCB adopted a decision for Phase 1, but has not rendered a decision on any of the other phases. Phases 2a, 6, 7, and 8 have yet to begin. Phase 2a is scheduled to begin in January 1999, to be followed by the remaining phases. Phase 6 will address an expansion of the joint point of operations between the SWP and CVP. Phase 7 will deal with the conformity of CVP water right permits with current usage.

Phase 8 will address the responsibility of diverters upstream of the Delta that have not agreed to contribute to meeting the 1995 Water Quality Control Plan. Phase 8 is expected to be controversial. Potential alternatives discussed in the draft EIR for this phase include the current situation, in which only the two projects are obligated to meet the Delta objectives, to

alternatives that shift some of the responsibility for meeting Delta objectives to upstream water rights holders besides the projects.

Coastal Branch Delivery Facilities

Phases I and II

In keeping with the Department's efforts to have appropriate water delivery facilities in place to meet demands, the Coastal Branch of the California Aqueduct was planned, designed, and constructed in two phases. The first phase was completed in the late 1960s and delivers water for agricultural use to contractors in northwestern Kern County. Phase I facilities include two pumping plants and a 14.8-mile coastal stub canal extending from Avenal Gap to the vicinity of Devil's Den in northwestern Kern County. Berrenda Mesa Water District, a member of Kern County Water Agency, and Castaic Lake Water Agency (formerly Devil's Den Water District), receive water through the Phase I facilities. The second phase became operational in mid-1997 and delivers water for municipal and industrial use to Santa Barbara County Flood Control and Water Conservation District and San Luis Obispo County Flood Control and Water Conservation District.

Phase II Construction

The Phase II project was divided into six construction reaches. In early 1994, the Department began acquiring rights-of-way and obtaining the permits necessary to construct the project and then began construction of the first two reaches. Four addenda and one supplement to the final EIR were prepared to document changes in the project. With the implementation of mitigation plans, the construction of the project resulted in no significant long-term impacts. All significant impacts were short-term and were associated with construction (traffic, noise, and air quality) activities. A legal challenge to the adequacy of the supplement to the EIR was resolved in favor of the Department.

In August 1997, Phase II facilities testing was completed and commercial operation began with delivery of treated SWP water to Santa Barbara and San Luis Obispo counties. Throughout the rest of 1997 and

into 1998, the Division of Engineering worked to resolve construction claims and close out construction contracts. Minor field activities continued, such as correcting erosion problems, resolving landowner problems, and implementing mitigation items.

Water Supply Development

To meet SWP contractors' increasing need for water, the Department investigates and implements plans to augment the SWP water supply.

Environmental Policy Acts

The National Environmental Policy Act (Title 42 United States Code sections 4321-4370 [1970]) and the California Environmental Quality Act (California Public Resources Code sections 21000-21177 [1970]) require government agencies to document and consider environmental consequences of their actions in their decision-making process. NEPA states that it is the goal of the federal government to use all practicable means consistent with other considerations of national policy to protect and enhance the quality of the environment. All federal agencies must prepare an environmental impact statement, including a discussion of mitigation measures and alternatives, for actions significantly affecting environmental quality.

The California Environmental Quality Act is patterned after NEPA. According to CEQA, agencies are required to (1) disclose, through an environmental impact report, the significant effects proposed projects would have on the environment; and (2) search for ways to reduce or avoid environmental damage.

CEQA applies to projects directly undertaken, funded, or approved by State or local agencies. NEPA applies to projects directly undertaken, funded, or approved by federal agencies. The Department conducts many projects in cooperation with federal agencies. In those cases both CEQA and NEPA must be followed.

NEPA requires that mitigation measures and alternatives be disclosed to the public in the Environmental Impact Statement, but it does not generally require federal agencies to adopt such mitigation measures or alternatives. CEQA, on the other hand, does impose substantive duties on all California government agencies approving projects with significant environmental impacts to adopt alternatives or mitigation measures that they find to be feasible to substantially lessen these impacts, unless there are overriding reasons why they cannot. When a project is subject to both CEQA and NEPA, both laws encourage the agencies to cooperate in planning the project and preparing joint environmental documents.

Through the environmental review process, citizens can learn about those significant effects and, if the project is approved, the reasons for approving the project. The review process requires agencies to:

- describe the proposed project;
- identify the lead and cooperating agencies involved in the project;
- determine the scope of study with responsible agencies and/or the public;
- prepare and distribute a draft EIS or EIR;
- respond to comments received on the draft;
- prepare the final EIS or EIR;
- make findings and adopt feasible alternatives or mitigation measures to avoid significant effects, if applicable;
- adopt a monitoring plan to ensure compliance with mitigation measures; and
- prepare a list of permits required to implement the project if the project is approved.

The scoping phase, which occurs early in the review process, is particularly important because it enables government agencies to identify issues and topics to be considered when preparing the report. Information gathered in the scoping phase helps agencies identify and evaluate reasonable alternatives; identify potential environmental impacts of the project; determine data and information needed; develop a work schedule; and allocate resources for preparing and distributing the draft environmental document for public review and comment.

NEPA requires a lead agency to involve the public during scoping, while CEQA does not. CEQA, however, does encourage public involvement at this stage. Members of the public may raise issues during the scoping phase and not just after the draft environmental document is prepared. Thus, the CEQA process leads to changes in projects through the development, consideration, and adoption of alternatives or enforceable mitigation measures to avoid or reduce any potential significant adverse effects on the environment.

The Department's plans include:

- developing programs to transfer water, either through programs such as the drought water bank or transfers between SWP long-term contractors and/or other agencies, including CVP contractors;
- establishing conjunctive-use programs; and
- using SWP funds to develop local water supplies.

Supplemental Water Acquisitions

During 1994, the Department began drafting a programmatic environmental impact report for the Supplemental Water Purchase Program. This EIR, released in February 1997, described a 6-year program intended to acquire up to 400,000 acre-feet annually from willing sellers for use by participating SWP contractors. Water for the program would be secured either through direct purchases or by the purchase of water supply options. However, comments received were highly critical of the groundwater pumping component of the program. Subsequently, the groundwater pumping component was removed, leaving only reservoir storage as a possible source of water under this program. The Department continues efforts to advance the remainder of the program.

State Water Project Conveyance

The Department arranges for the temporary transfer of water through SWP facilities for SWP long-term contractors as well as for other agencies. Those transfers can take three forms: (1) water exchanges among SWP long-term contractors or among contractors and non-SWP contracting entities; (2) entitlement water transfers between long-term SWP contractors; or (3) transfers of nonproject water to non-SWP and SWP agencies.

CALFED Bay-Delta Program—Water Transfer Program

The Department actively participates in the formulation of CALFED's Water Transfer Program through the Bay-Delta Advisory Council Water Transfer Work Group and the Transfers Agency Group. The program proposes a framework of actions, policies, and processes to facilitate water transfers and further develop a statewide water transfer market. The program document will describe the relationship of water transfers to other water management actions

and programs, discuss existing laws and statutes, such as Water Code Section 1810 *et seq.*, and identify issues and problems related to transfers. The document will also make recommendations to resolve these issues and suggest strategies to implement these recommendations. The Water Transfer Program is one of eight program elements being developed for CALFED's Bay-Delta Program programmatic EIR/EIS.

Conjunctive-Use Program

Conjunctive use is a set of water management techniques that store surface water underground in times of abundant supply for use in dry years, when shortages are being experienced. In general, storage would be accomplished by either direct recharge (for example, using percolation ponds) or by in-lieu recharge, with an intermittent supply of surface water provided to users normally relying on groundwater. Generally, in-lieu recharge is practiced in an agricultural setting to avoid the cost associated with treating water for municipal use on an occasional basis. Carefully implemented conjunctive-use programs can operate without causing significant adverse impacts. However, they must be carefully formulated to account for the potential effects on native vegetation and wetland habitat, fish and wildlife resources, water quality, land subsidence, and impacts to users who do not directly participate in the programs.

Conjunctive use of surface water and groundwater can provide important benefits in water management. Historically, conjunctive use grew from local efforts to manage erratic surface water supplies. These efforts led to increased recognition of the potential for conjunctive use to increase the efficiency of both local and regional water supply systems in a cost-effective and environmentally sensitive manner.

Water planners realized that conjunctive-use projects could be an important component of meeting water needs. However, plans must be carefully formulated to assure that the ability of the source areas to meet future needs is not compromised.

Joint resources could be combined for cooperative projects that would benefit both local participants and future recipients of any newly-developed water supply.

Water Code Section 1810 *et seq.*

1810. Notwithstanding any other provision of law, neither the state, nor any regional or local public agency may deny a bona fide transferor of water the use of a water conveyance facility which has unused capacity, for the period of time for which that capacity is available, if fair compensation is paid for that use, subject to the following:

- (a) Any person or public agency that has a long-term water service contract with or the right to receive water from the owner of the conveyance facility shall have the right to use any unused capacity prior to any bona fide transferor.
- (b) The commingling of transferred water does not result in a diminution of the beneficial uses or quality of the water in the facility, except that the transferor may, at the transferor's own expense, provide for treatment to prevent the diminution, and the transferred water is of substantially the same quality as the water in the facility.
- (c) Any person or public agency that has a water service contract with or the right to receive water from the owner of the conveyance facility who has an emergency need may utilize the unused capacity that was made available pursuant to this section for the duration of the emergency.
- (d) This use of a water conveyance facility is to be made without injuring any legal user of water and without unreasonably affecting fish, wildlife, or other instream beneficial uses and without unreasonably affecting the overall economy or the environment of the county from which the water is being transferred.
- (e) "Fair compensation" means the reasonable charge incurred by the owner of the conveyance system, including capital, operation, maintenance, and replacement costs, increased costs from any necessitated purchase of supplemental power, and including reasonable credit for any offsetting benefits for the use of the conveyance system.
- (f) "Replacement costs" means the reasonable portion of costs associated with material acquisition for the correction of unrepairable wear or other deterioration of conveyance facility parts which have an anticipated life which is less than the conveyance facility repayment period and which costs are attributable to the proposed use.
- (g) "Unused capacity" means space that is available within the operational limits of the conveyance system and which the owner is not using during the period for which the transfer is proposed and which space is sufficient to convey the quantity of water proposed to be transferred.

1811. As used in this article, the following terms shall have the following meanings:

- (a) "Bona fide transferor" means a person or public agency as defined in Section 20009 of the Government Code with a contract for sale of water which may be conditioned upon the acquisition of conveyance facility capacity to convey the water that is the subject of the contract.
- (b) "Emergency" means a sudden occurrence such as a storm, flood, fire, or an unexpected equipment outage impairing the ability of a person or public agency to make water deliveries.

1812. The state, regional, or local public agency owning the water conveyance facility shall in a timely manner determine the following:

- (a) The amount and availability of unused capacity.
- (b) The terms and conditions, including operation and maintenance requirements and scheduling, quality requirements, term or use, priorities, and fair compensation.

1813. In making the determinations required by this article, the respective public agency shall act in a reasonable manner consistent with the requirements of law to facilitate the voluntary sale, lease, or exchange of water and shall support its determinations by written findings. In any judicial action challenging any determination made under this article the court shall consider all relevant evidence, and the court shall give due consideration to the purposes and policies of this article. In any such case the court shall sustain the determination of the public agency if it finds that the determination is supported by substantial evidence.

1814. This article shall apply to only 70 percent of the unused capacity.

The Department has long recognized the importance of conjunctive water-use management of California's surface and groundwater resources. Conjunctive-use management was an integral part of *The California Water Plan* (Bulletin 3) published in 1957. Since that time, the Department has continued to investigate the poten-

tial for conjunctive use. In 1992, the Department began a program to develop projects in the Sacramento Valley that could augment the supply of the SWP. During 1997 and 1998, the Department, in cooperation with local agencies, continued studies of several potential project areas in the Sacramento Valley.

American Basin. In June 1997, the Department completed a feasibility investigation for a conjunctive-use project in the American Basin area of Sutter, Placer, and Sacramento counties. The project has the potential to develop more than 50,000 acre-feet of dry-year supply through a combination of in-lieu recharge, groundwater substitution, and transfers from surface storage. The local cooperators include the Natomas Central and Pleasant Grove-Verona Mutual water companies and the Placer County Water Agency. This project forms the basis for a pilot program to evaluate a new approach to project management between the Department and its contractors. Under this approach, individual contractors are allowed the option to participate in a particular project (opt-in). All project costs will be borne by those contractors who opt-in, and they will receive all benefits from the project. Seven SWP contractors have opted to participate in the American Basin Project. The Department, SWP, and local participants are negotiating a set of principles for participation that will define their respective roles and responsibilities during the environmental compliance and permitting phases of project development.

Lower Colusa Basin. In July 1997, the Department completed a prefeasibility investigation of the conjunctive-use potential in the Lower Colusa Basin in northern Yolo and southern Colusa counties. The local cooperators in this investigation are Reclamation District No. 108, Colusa County Water District, and Yolo-Zamora Water District. The proposed project would develop up to 34,000 acre-feet of dry-year supply for the SWP, while helping alleviate problems resulting from land subsidence in the project area. Recharge would be accomplished through the development of conveyance facilities to deliver surface water to Yolo-Zamora and/or Colusa County Water District in wet years. In dry years, Reclamation District-108 would pump previously stored groundwater as part of its supply and release an equivalent amount of surface water to the SWP. The prefeasibility investigation identified significant gaps in knowledge of the groundwater system in RD-108, and subsequent work has focused on implementing an exploration program and developing a monitoring system to gather more detailed information for a feasibility study.

Butte Basin. The Department completed Phase III of its conjunctive-use investigation at the Chico M&T Ranch in November 1996. Although the project showed promise, ranch management asked that further work be postponed because of the uncertain environment created by adoption of a groundwater management ordinance in Butte County (Measure G). Additional work was premature because procedures to implement the ordinance and requirements to permit groundwater substitution activities were not clarified. The Department continued efforts to monitor the groundwater system and work cooperatively with the Butte Basin Water Users Association to establish an environment conducive to development of conjunctive-use projects. Studies indicated that the basin is physically capable of providing significant quantities of additional water through groundwater substitution in dry years, with recovery occurring during subsequent wet years. However, uncertainties remain concerning the amount of “new” water that can be developed from the hydrologic system and how to identify and mitigate potential impacts to third parties.

Yuba County. In 1998, the Department, in cooperation with Yuba County Water Agency, completed development of a groundwater simulation model for the valley floor parties of Yuba County. The model will be used to help design and evaluate options for operating the groundwater basin in conjunction with YCWA’s Yuba River system and the SWP.

Local Agency Concerns. Institutions and individuals in the Sacramento Valley are faced with a confusing array of proposals and activities that are sometimes perceived as threats to their water supplies. These include the Department’s conjunctive-use and water-transfer programs; CALFED’s Bay-Delta program; SWRCB’s Delta water-rights hearings and attempts to reach settlements as part of that process; and the activities of USBR in implementing the Central Valley Project Improvement Act, and in contract-renewal negotiations, among others. Local agencies are increasingly active in developing groundwater management programs and are asserting increased local control over water supply development and management. The Department works with local agencies and interested parties to address concerns and inform them about the potential for

conjunctive use as an element of overall resource development and management.

Local Water Supply Projects

Local projects to augment water supply may be financed with SWP funds and become units of the SWP if the Department determines that the projects are structurally, economically, financially, and contractually feasible as well as environmentally acceptable. SWP contractors benefit from increased water supplies or reduced demands resulting from the projects.

Should construction costs of the local project exceed available SWP funds, local participation in financing the construction will be required. In addition, SWP funding will not exceed actual construction costs, and the local project will not become a unit of the SWP until all participants sign an agreement.

For a project to be financed by the SWP, the Department must be assured that:

- appropriate water supply contracts will be amended;
- yield developed by a local project as a unit of the SWP will become part of the SWP yield, whether for the life of the project or for an interim period; and
- the local project will not adversely affect the costs of water deliveries to nonparticipating SWP contractors.

The Department conducts a feasibility study of local projects only when conceptual and reconnaissance reports support the project and SWP contractors agree that the project is advantageous.

At this time, no local projects are being considered by the Department.

Central Valley Project Improvement Act of 1992

The Central Valley Project Improvement Act (PL 102-575; 106 Stat. 4706) made protection, restoration, and enhancement of fish and wildlife a major purpose of the CVP. Because it requires specific water supply actions, the CVPIA directly affects the joint activities of the CVP and SWP. The act indirectly influences SWP operations by addressing several Delta environmental issues.

The CVPIA is designed to (1) protect, restore, and enhance fish, wildlife, and associated habitats in the Central Valley and Trinity River basins; (2) address impacts of CVP on fish, wildlife, and associated habitats; (3) improve operational flexibility of the CVP; (4) encourage expanded use of voluntary water transfers and water conservation; (5) contribute to efforts to protect the Sacramento-San Joaquin Delta and estuary; and (6) achieve a reasonable balance among competing demands for CVP water, including fish and wildlife, agricultural, municipal, and power uses.

In addition to imposing further limitations on new and renewed CVP contracts and encouraging voluntary transfers of CVP water, the CVPIA requires the implementation of a program to ensure that by 2002, natural production of anadromous fish will be sustainable at population levels twice the average sustained from 1967 to 1991. The CVPIA also requires the dedication and management of an additional 800,000 acre-feet of CVP yield for fish and wildlife needs.

The CVPIA also specifies measures to restore fish and wildlife and their habitat. Several measures—including installing a structural temperature control device at Shasta Dam, constructing specified Delta barriers, and acquiring supplemental wildlife refuge water—require cost sharing by the State of California. USBR is establishing guidelines and procedures to implement the CVPIA requirements. The Department works closely with USBR as these programs develop to manage any effects on SWP operations and minimize adverse impacts to threatened and endangered species.

Information in this chapter was contributed by the State Water Project Analysis Office, the Division of Planning and Local Assistance, and the Office of State Water Project Planning.

Chapter 8
Water Supply and Allocation

Bullards Bar Reservoir
in the Central Valley

Significant Events

- Water year 1997-98 was affected by a strong El Niño, which contributed to the fourth wet year in a row for Northern California.

To meet contracted obligations to the State Water Project long-term water supply contractors, the Department of Water Resources monitors precipitation, calculates runoff, and operates storage facilities as required.

During each water year, from October 1 through September 30, the Department monitors and records precipitation, runoff, and reservoir water storage.

Water Year 1997-98

Precipitation

Water year 1997-98 was the fourth wet year in a row for Northern California. The year was affected by a strong El Niño in the eastern tropical Pacific Ocean that produced above-average precipitation in California, especially the central and southern portions of the State. It was a year of big snowpacks and abundant snowmelt runoff. Figure 8-1 shows statewide precipitation by hydrologic region.

In contrast to 1997, coastal watersheds and smaller basins generated the larger floods of 1998. New flood peaks were observed on the Pajaro River near Watsonville, the Cuyama River above Twitchell Reservoir, at Clear Lake, Farmington and Los Banos reservoirs, and on Merced area creeks. The upper Sacramento Valley was also wet; flooding was comparable to the larger floods of record, despite effective flood control operations at Shasta Reservoir. Flood runoff from major Sierra rivers, including the Feather River, was not unusually large; peak 3-day rates were near median (the rate to be expected in 1 year out of 2).

October started the water year with near-normal precipitation while November was above average, but not unusually wet. December was below average, even with some intense local storms in the South Coast region during the first weekend of the month. After a slow start in December, the winter turned wet. Both January and February were extremely wet—February precipitation was nearly three times normal. However, the February storms were rela-

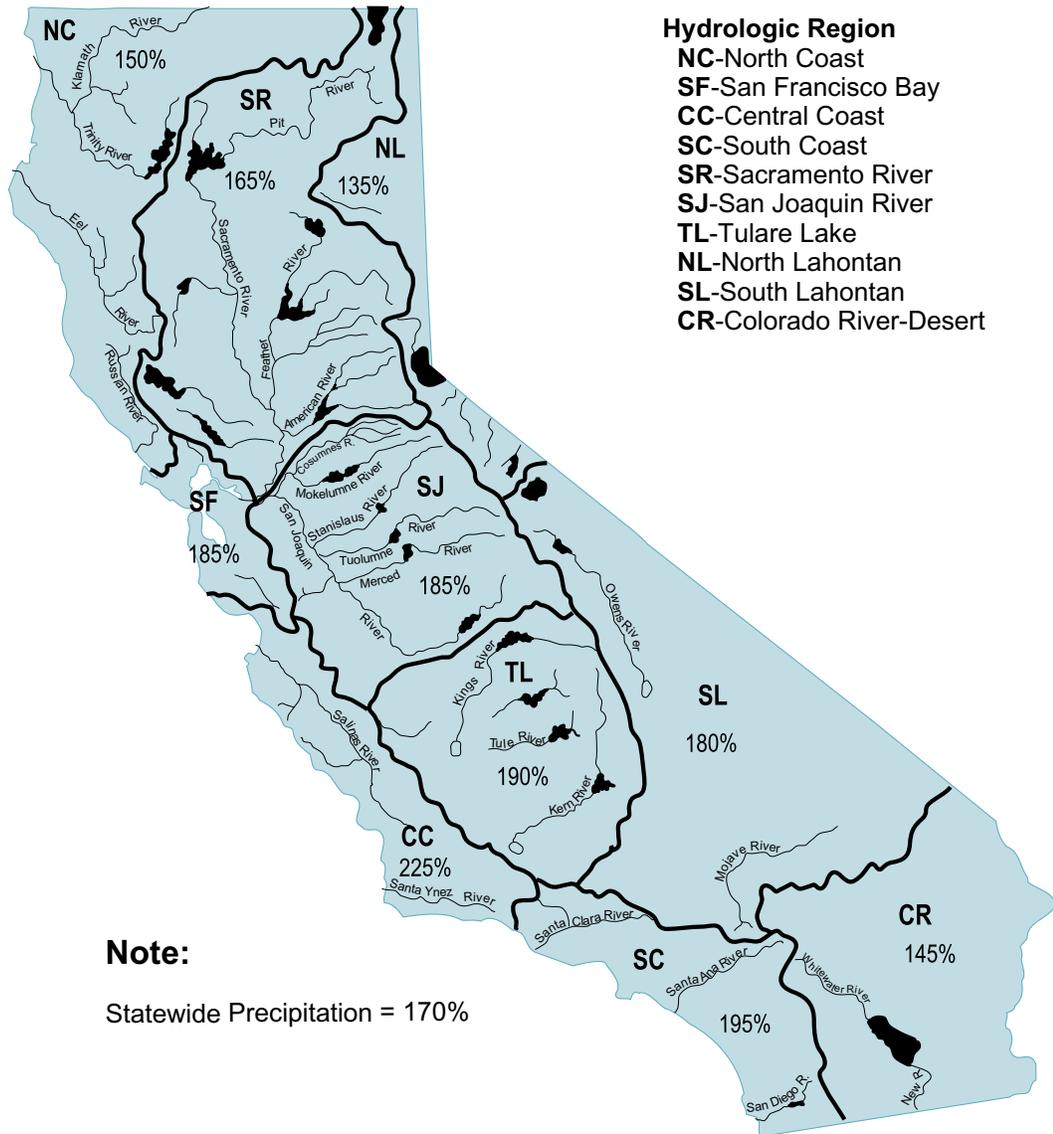

tively cool and contributed to a heavy snowpack in the mountains. Some of the largest snowpack percentages were on the ridge separating the Sacramento and Trinity river basins. With the exception of 1995, 1998 had the heaviest snowpack since 1983, another strong El Niño year. The Sacramento River system easily handles snowmelt floods because of its large rain-flood channel capacity. However, San Joaquin River system floodways are only about one-tenth as large and heavy snowmelt years tax the reservoirs and channel systems. Snowmelt in 1998 was delayed about 2 weeks, which helped to control the high San Joaquin River system runoff. The water-supply forecasts were useful for coordinating releases and operating the reservoirs to minimize snowmelt flood damage.

March and April had above-average precipitation, 135 and 125 percent of average, respectively, statewide, but were not nearly as wet as February. May was cool and wet—more typical of March weather. A surprise storm in the upper Sacramento Valley near the end of May produced moderate flood flows in the Sacramento River and the latest occurring inundation of the Sutter and Yolo bypasses observed in a flood season. June started out cool and wet, but in the middle of the month the weather turned dry and remained that way for the rest of the summer. September saw near-normal showers in the mountains.

Runoff

Runoff in water year 1998 in the Central Valley rivers was less than in 1983 (the wettest year recorded in the 20th century) or 1995. However, 1998 runoff was about 20 percent more than in 1997. Total runoff for the eight major rivers of the Sacramento-San Joaquin River system was nearly 42 million acre-feet, about 175 percent of average and the sixth wettest of record.

Figure 8-1
Statewide Precipitation by Hydrologic Region, 1997-98 Water Year, in Percentage of Average

SWP Storage

The SWP operates a complex system of 28 dams and reservoirs to collect and store water for future deliveries. Lake Oroville is the first of two primary SWP conservation facilities. Inflow to Lake Oroville comes from the Feather River.

San Luis Reservoir, in the central part of the State, is the second primary SWP conservation facility and derives its inflow from pumping at Gianelli Pumping-Generating Plant. San Luis is off-stream storage, with most water in the reservoir pumped in from late fall to early spring, temporarily stored, and then later released back to the aqueduct to meet water-contractor peaking demands in the summer months. The remaining 26 dams and reservoirs regulate the stored water supply into water delivery patterns designed to fit local needs.

Reservoir storage in the SWP at the end of the 1998 water year was 135 percent of average, compared to 95 percent in 1997. Total 1998 storage in major SWP reservoirs was 4.39 million acre-feet on September 30, about 1.2 million acre-feet more than the storage at the same time in 1997. September 30 storage at Lake Oroville was 2.8 million acre-feet, about 692,000 acre-feet more than last year. The State's share of San Luis Reservoir storage was 900,063 acre-feet, compared to 461,642 acre-feet last year. The combined storage in southern reservoirs was 662,000 acre-feet on September 30, compared to 576,000 acre-feet in the 1997 water year.

Total storage in major SWP reservoirs was about 4.4 million acre-feet at the end of calendar year 1998, compared with 3.9 million acre-feet in 1997. The State's share of San Luis Reservoir storage was about 1.07 million acre-feet, compared with 994,000 acre-feet at the same time in 1997. The combined storage in southern reservoirs was about 628,000 acre-feet on December 31, compared with 631,000 acre-feet in 1997.

The following information about these reservoirs, including amounts of unimpaired runoff to Lake Oroville and storage levels for SWP conservation and other storage facilities, is based on the 1998 water year.

Lake Oroville. Lake Oroville, the keystone of the SWP, has a maximum capacity of 3,537,580 acre-feet. Runoff from the Feather River drainage is collected and stored in the reservoir for release to the Sacramento-San Joaquin Delta through Oroville Dam, Thermalito Diversion Dam, and Thermalito Afterbay.

Lake Oroville inflow for the 1997-98 water year totaled about 6.69 million acre-feet—150 percent of average. Minimum storage occurred January 1, 1998, at 2,231,018 acre-feet—63 percent capacity. Maximum storage occurred June 28, 1998, at 3,525,895 acre-feet—about 99 percent of capacity.

See figures 8-2 and 8-3 for monthly and cumulative inflow, respectively, into Lake Oroville for calendar years 1996 through 1998. Total inflow into Lake Oroville during the 1998 calendar year was 6,957,224 acre-feet. Lake Oroville storage at the end of 1998 was 2,687,877 acre-feet. Figure 8-4 compares end-of-month storage at Lake Oroville for the 1997 and 1998 calendar years.

San Luis Reservoir. The Department and the U.S. Bureau of Reclamation operate San Luis Reservoir jointly according to operating procedures completed in June 1981. San Luis Reservoir has a normal operating capacity of 2,027,840 acre-feet. The SWP share of capacity is 1,062,183 acre-feet.

As of October 1, 1997, San Luis Reservoir contained 593,428 acre-feet—29 percent of its capacity. The SWP share was 461,642 acre-feet. By April 7, 1998, San Luis Reservoir reached its maximum storage for 1998 at 2,030,377 acre-feet—100 percent of normal maximum operating capacity. The highest end-of-month SWP share of storage was in January 1998 at 1,068,144 acre-feet (Figure 8-5) with the SWP storing some water in the vacant USBR share of storage.

Lake Del Valle. Lake Del Valle, situated off the South Bay Aqueduct, primarily stores water for later delivery in Santa Clara and Alameda counties. At the beginning of the 1997-98 water year, Lake Del Valle held 32,014 acre-feet—about 41 percent of its maximum capacity of 77,106 acre-feet. Its highest storage occurred February 8, 1998, at 53,805 acre-feet.

Figure 8-2
Monthly Inflow into Lake Oroville from Feather River, 1996-98 Calendar Years

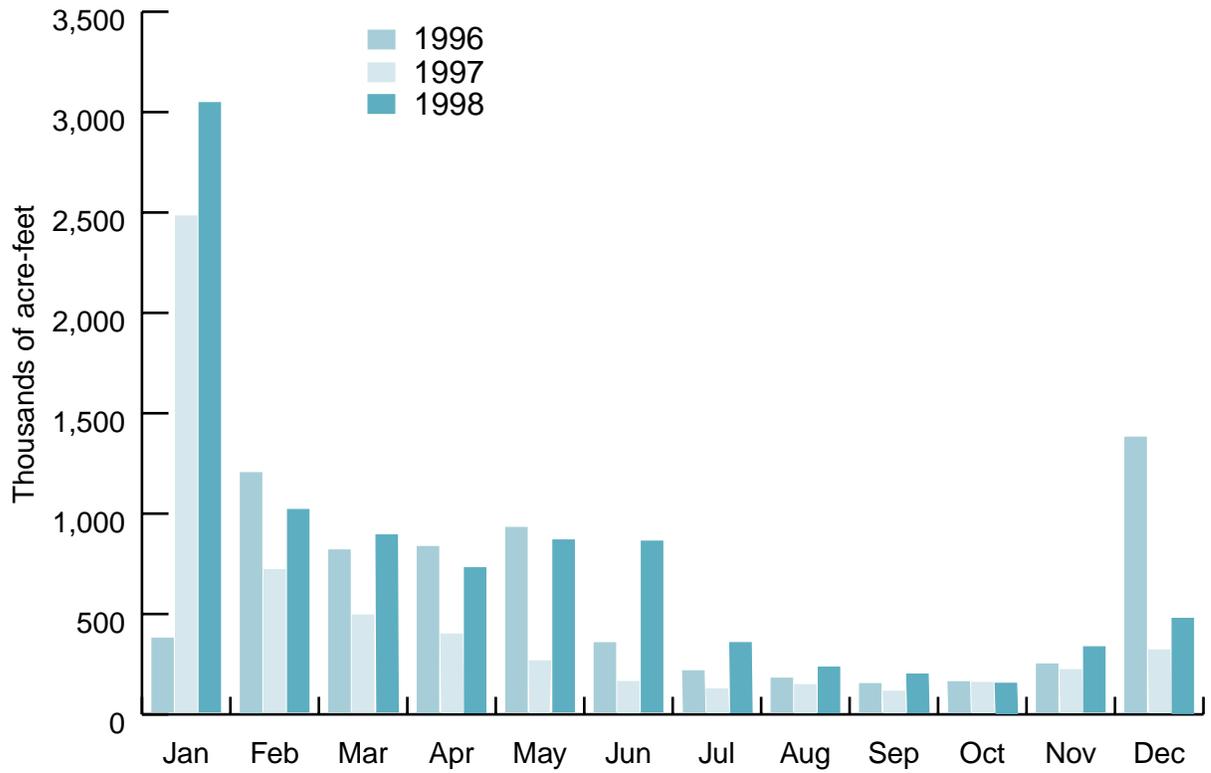

Figure 8-3
Cumulative Inflow into Lake Oroville from Feather River

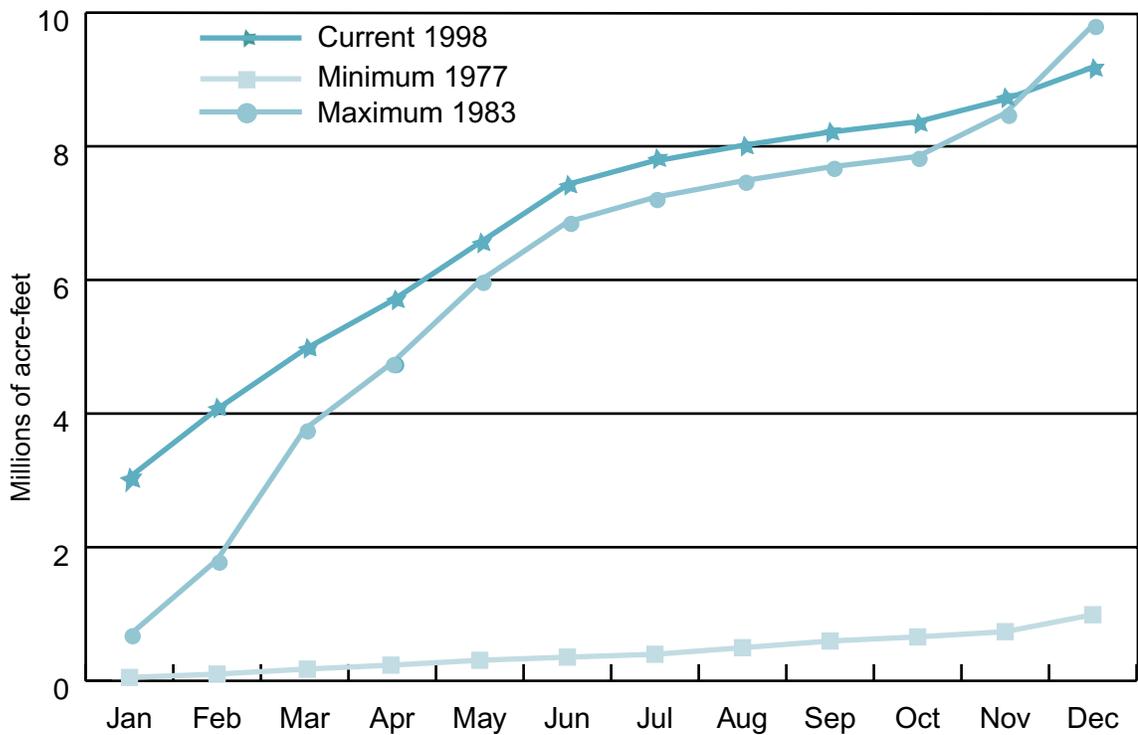

Figure 8-4
End-of-Month Storage in Oroville Reservoir, 1997 and 1998 Calendar Years

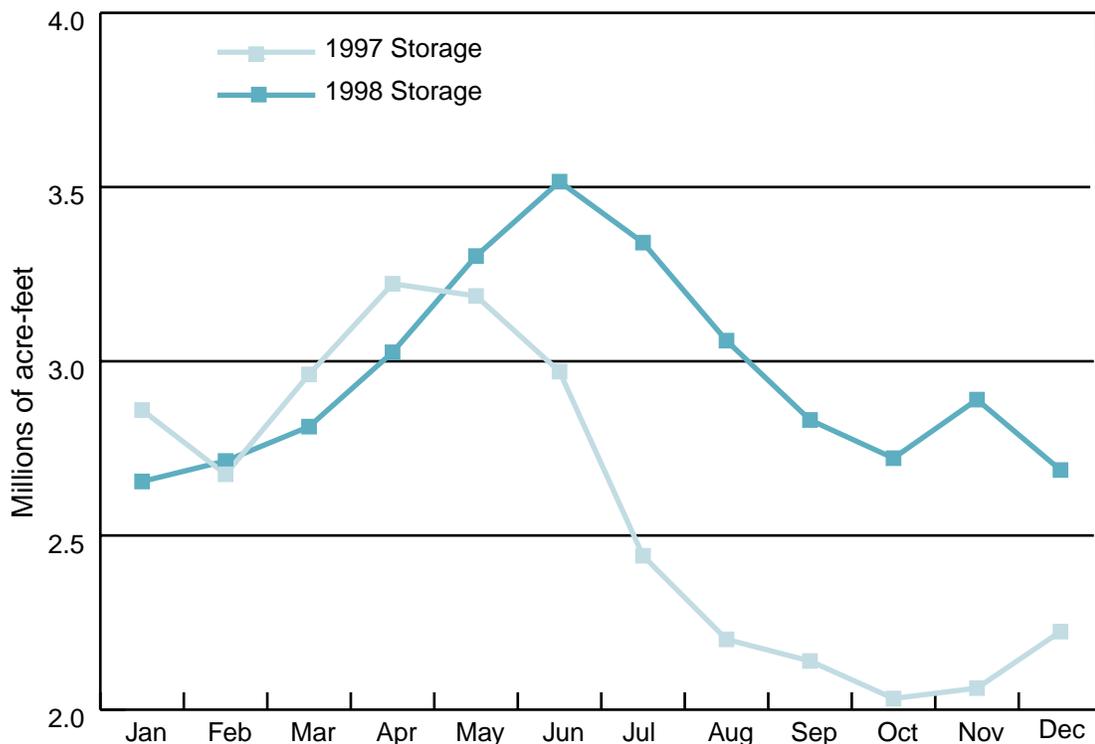

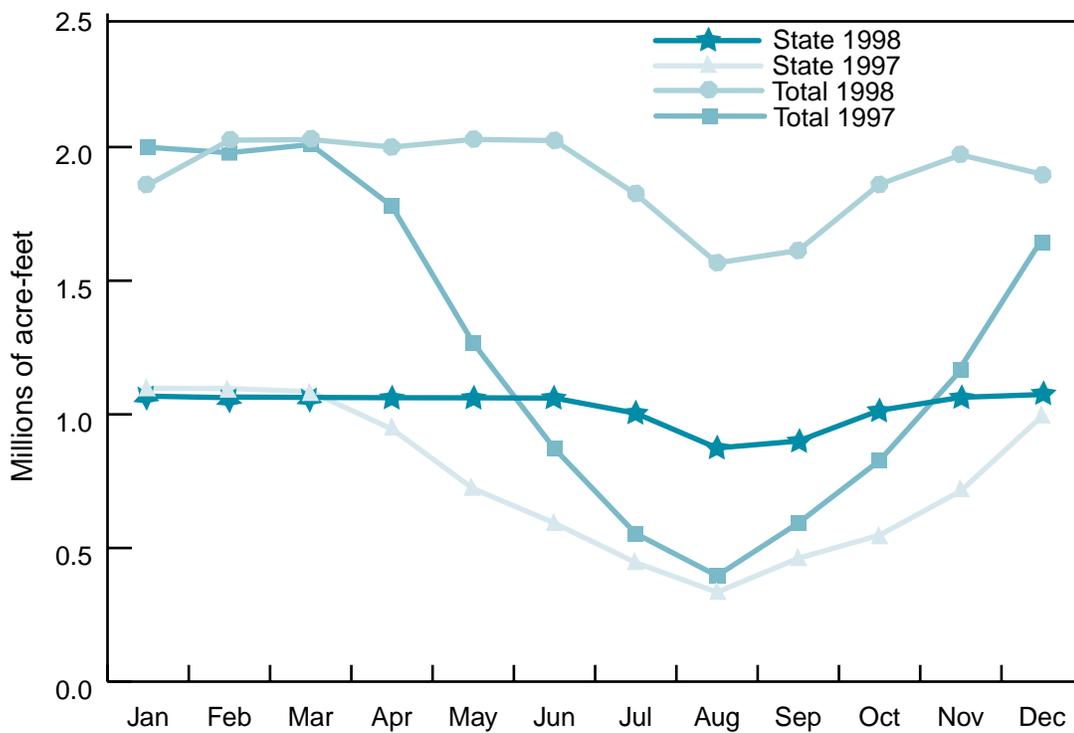

Figure 8-5
End-of-Month Storage in San Luis Reservoir, 1997 and 1998 Calendar Years

By the end of the 1998 water year, on September 30, 1998, storage in Lake Del Valle dropped to 30,776 acre-feet—40 percent of maximum capacity. Releases to Arroyo Del Valle and South Bay Aqueduct from Lake Del Valle totaled 85,019 acre-feet for the 1997-98 water year.

Southern Reservoirs. During normal operating conditions, the Department maintains its four southern reservoirs—Pyramid, Castaic, and Silverwood lakes and Lake Perris—at or near full operating capacity to ensure uninterrupted deliveries of water to Southern California contractors.

At the beginning of the 1998 water year, these reservoirs held 603,000 acre-feet—86 percent of their combined normal maximum operating capacity of 701,321 acre-feet. At the end of the water year they held 662,000 acre-feet—94 percent of combined normal maximum operating capacity.

Diversions from the Delta

The SWP diverts water from the Sacramento-San Joaquin Delta through Banks and Barker Slough pumping plants for delivery to SWP storage facilities and contractors. In 1998, the SWP diverted 1,688,312 acre-feet at Banks Pumping Plant, including a combined total of 28,108 acre-feet of Central Valley Project and Cross Valley Canal water wheeled by the Department. Figure 8-6 shows the amounts of water pumped each month in 1998 at Banks Pumping Plant; Figure 8-7 shows the monthly amounts of water diverted from the Delta by the SWP and CVP in 1998. CVP diverts water to similar areas from the Delta through Tracy Pumping Plant. CVP diverted about 2,095,317 acre-feet at Tracy Pumping Plant in 1998. Combined Delta exports include all of these plants.

From Banks Pumping Plant, water is delivered either to the South Bay area through the South Bay Aqueduct or to the San Joaquin Valley, Central Coastal, and Southern California areas through the California Aqueduct. From Barker Slough Pumping Plant, water is delivered to the North Bay Aqueduct.

On October 9, 1998, the Department began pumping Cross Valley Canal water at Banks Pumping Plant for

USBR according to the Cross Valley Canal Wheeling agreements. The initial rate was about 600 acre-feet per day during on-peak hours. Total amount pumped for the month was about 13,900 acre-feet.

Combined SWP and CVP Delta exports peaked at around 22,000 acre-feet per day during the first 2 weeks of 1998 due to increased downstream demands. Demands decreased as runoff in major Northern California rivers ranged up to 200 percent of monthly average in January. In February, statewide runoff was nearly two and one-half times average for the month, while total exports dropped to below 2,000 acre-feet per day. Total monthly Delta exports in 1998 gradually increased from about 104,000 acre-feet in April to about 562,000 acre-feet in October, before finally dropping to about 144,000 acre-feet in December. Delta exports totaled about 3.8 million acre-feet for 1998.

The SWP also diverted 36,468 acre-feet at Barker Slough Pumping Plant to deliver through the North Bay Aqueduct for use by North Bay Aqueduct water contractors.

In the San Joaquin Valley near Kettleman City, the existing Coastal Branch of the Aqueduct serves agricultural areas west of the California Aqueduct, including municipal and industrial water users in San Luis Obispo and Santa Barbara counties. In 1998, total water pumped through Dos Amigos Pumping Plant to the San Joaquin Valley totaled about 2.5 million acre-feet. Included in that amount are 13,500 acre-feet for CVC water delivered to Westlands Water District. Also included is about 1,010,000 acre-feet federal share of pumping at Dos Amigos. Figure 8-8 shows the State's share of water pumped each month.

In 1998, water pumped through Edmonston Pumping Plant for delivery to Southern California totaled 564,121 acre-feet. Figure 8-9 shows the amount of water pumped each month.

Information for this chapter was provided by the Division of Flood Management, the Division of Operations and Maintenance, and the State Water Project Analysis Office.

Chapter 9

Water Contracts and Deliveries

Banks Pumping Plant

Significant Events

- The Department executed a letter agreement among Alameda County Flood Control and Water Conservation District-Zone 7, San Benito County Water District, and the Department, approving the conveyance of up to 4,000 acre-feet of SBCWD's Central Valley Project water from O'Neill Forebay to the Semitropic Water Storage District for banking and later exchange.
- The Department executed an agreement among Coachella Valley Water District, Desert Water Agency, Tulare Lake Basin Water Storage District, Delta Lands Reclamation District No.770, and the Department, approving the conveyance and delivery of up to 30,000 acre-feet of flood-flow runoff from the Kaweah, Tule, and Kings rivers to CVWD and DWA.
- In 1998, the SWP delivered 2,755,335 acre-feet of water to 27 of its 29 long-term water contractors and 16 other agencies.
- The SWP delivered 1,745,807 acre-feet of entitlement water to 27 of its 29 long-term water contractors, thus meeting 100 percent of contractors' demands for entitlement water.

The long-term water supply contracts for water service from the State Water Project between the Department and 29 local agencies are basic to the project's construction and operation. In return for the State financing, constructing, operating, and maintaining facilities needed to provide water service, the agencies contractually agreed to repay all associated SWP capital and operating costs.

The Department delivers water to SWP contractors according to long-term water supply contracts, which are amended as needed. The contracts, among other things, specify amounts of water that the Department may deliver to SWP contractors every year. During 1998, the Department executed one amendment to these contracts.

The Department also enters into miscellaneous agreements with SWP contractors and other agen-

cies—which may be amended periodically—to convey SWP and non-SWP water through the California Aqueduct, approve turnout construction along SWP facilities, and establish turnout operation and maintenance regulations. During 1998, the Department executed 24 water conveyance/storage agreements, and one turnout agreement with SWP contractors.

Detailed information about contracts and amendments follows.

Long-Term SWP Water Supply Contracts

The first water supply contract was signed with the Metropolitan Water District of Southern California on November 4, 1960. The contract was negotiated by the Department and MWD according to terms of the contracting principles for water service contracts announced by Governor Edmund G. Brown on January 20, 1960.

The MWD contract became the prototype for all water contracts; by the end of 1967, 31 agencies had contracted for water. In addition, a water supply contract was executed with the City of West Covina in December 1963, but was terminated in August 1965; the city's water entitlement was transferred to MWD through an amendment to the district's long-term contract with the Department. Long-term contracts with Hacienda Water District and Devil's Den Water District were also terminated when those districts transferred their water entitlements, through contract amendments, to Tulare Lake Basin Water Storage District (1981) and Castaic Lake Water Agency (1992), respectively. Today the SWP has long-term water supply contracts with 29 agencies. Those contracts have been amended repeatedly to incorporate mutually desired modifications.

All water contracts signed in the 1960s included an estimate of the date water would first be delivered and a schedule of the amount of water the agency could expect to be delivered annually (annual entitlement). That amount was designed to increase gradually until the maximum amount of annual entitlement was reached. The total combined maximum annual entitlement for all water contracting agencies was initially 4,230,000 acre-feet, assuming full development of the SWP.

The contracts were initially designed to be valid for 75 years or until all bonds sold as part of the California Water Resources Development Bond Act were repaid, whichever period was longer. As a result of amendments to contracts in the 1990s, the current combined maximum annual entitlement totals 4,172,786 acre-feet, and the contracts are in effect for the longest of the following periods: (1) the project repayment period, which extends to the year 2035; (2) 75 years from the date of the contract; or (3) the period ending with the latest maturity date of any bond used to finance the construction costs of project facilities.

Amendments to Long-Term SWP Water Supply Contracts

All the original contracts signed by the Department and local agencies have been amended to incorporate mutually desired changes. Most amendments fall under the following eight general categories:

- revision of annual entitlements;
- enlargement and extension of the East Branch and extension of the Coastal Branch of the California Aqueduct;
- purchase of excess capacity;
- provisions to carry over entitlement water;
- surplus water provisions;
- unscheduled water provisions;
- wet-weather provisions; and
- Monterey Agreement principles.

Table 9-1 describes the eight categories of amendments while Table 9-2 lists contractors in each category.

The following long-term contract was amended during 1998.

Napa County Flood Control and Water Conservation District. The Department executed Amendment Number 20, dated December 10, 1998, to the long-term water supply contract between NCFCWCD and the Department. The Amendment provided for increasing NCFCWCD’s Table A annual entitlements from 1999 through 2013 and decreasing them from 2014 through 2018. The maximum annual entitlement to be reached in 2021 was not revised and remained at 25,000 acre-feet. (Amendment Number 19 was never executed.)

**Table 9-1
Amendments to Water Supply Contracts, by Category**

<i>Category^a</i>	<i>Description</i>
1. Revision of annual entitlements	Amendments to Table A, “Annual Entitlements,” of water supply contracts resulting in changes in annual amounts of entitlement water to long-term water service contractors
2. Enlargement or extension of East Branch and Extension of Coastal Branch of California Aqueduct	Amendments for allocating costs and benefits of the enlargement or extension of the East Branch aqueduct, and extension of the Phase II facilities of the Coastal Branch of the California Aqueduct
3. Purchase of excess capacity	Amendments to allow contractors to contract for excess capacity in the California Aqueduct
4. Provisions to carry over entitlement water [Article12(e)]	Amendments to allow contractors to carry over undelivered entitlement water from one year for delivery in the next year, providing certain conditions are met
5. Surplus water provisions	Amendments to allow contractors to take delivery of surplus water; that is, water in excess of that required to meet all demands for entitlement water
6. Unscheduled water provisions	Amendments to allow contractors to take delivery of unscheduled water; that is, water available for a very short time when excess water and SWP pumping capacity are available in the Delta
7. Wet-weather provisions	Amendments to allow contractors to take, under certain conditions, delivery of entitlement water in subsequent years if favorable local weather conditions result in adequate local water supplies
8. Monterey Agreement principles	Amendments to implement the principles of the Monterey Agreement, described in detail in Bulletin 132-95, pages 5 through 9

^a See Table 9-2, “Amendments to Water Supply Contracts, December 31, 1998, by Category and Contracting Agency,” for names of contractors to which categories apply. In addition, each volume of *The California State Water Project Water Supply Contracts* contains a list of amendments by category.

^a Categories correspond to those listed in Table 9-1, "Amendments to Water Supply Contracts, by Category."
^b • indicates amendment category nullified by Monterey Amendments.

Monterey Amendments

During 1998, the Department did not execute any Monterey Amendments. Plumas County Flood Control and Water Conservation District, Empire West Side Irrigation District, and Ventura County Flood Control District remain the only long-term SWP contractors who have not signed the Monterey Amendment.

The Monterey Amendments increase the reliability of existing water supplies; provide stronger financial management for the SWP; and increase water management flexibility, providing more tools for local water agencies to maximize use of existing facilities. Changes to SWP operations incorporated in the Monterey Amendments include changes in determination of water allocations, transfer of entitlement and land, financial restructuring, and increased operational flexibility.

Miscellaneous Agreements with Long-Term SWP Contractors

During 1998, the Department entered into the following agreements.

Water Conveyance/Storage Agreements

Agreements were executed with long-term contractors as listed below.

Alameda County Flood Control and Water Conservation District-Zone 7. A letter agreement, dated September 8, 1998, among the Department, ACFCWCD-Zone 7, and San Benito County Water District, approved the conveyance of up to 4,000 acre-feet of SBCWD's CVP water from O'Neill Forebay to Semitropic Water Storage District for banking and later exchange. This water was a portion of SBCWD's CVP water allocation that it could not use because the Hollister Conduit, a pipeline to SBCWD from San Luis Reservoir, washed out earlier in the year. SBCWD requested ACFCWCD-Zone 7 to bank and return the water in accordance with ACFCWCD-Zone 7's agreement with SWSD for the water banking and exchange program. Deliveries of the return water to ACFCWCD-Zone 7 and SBCWD are to be completed by December 31, 2018. A total of 4,000 acre-feet was delivered to SWSD.

Alameda County Flood Control and Water Conservation District-Zone 7. The agreement, dated

December 10, 1998, among ACFCWCD-Zone 7, KCWA, and the Department, provided for the delivery of a portion of ACFCWCD-Zone 7's 1998 entitlement water and other water supplies, to be stored in, and later recovered from, groundwater basins within KCWA, in accordance with the ACFCWCD-Zone 7 and Semitropic Water Storage District Banking Program Agreement. All return water is to be delivered to ACFCWCD-Zone 7 by December 31, 2035. This agreement is in accordance with the provisions of the Monterey Amendment that encourage operational flexibility for the SWP, such as groundwater storage of SWP water outside a contractor's service area for later use within the service area. During 1998, the Department delivered 1,970 acre-feet of ACFCWCD-Zone 7's 1998 SWP entitlement water for storage by SWSW.

Alameda County Flood Control and Water Conservation District-Zone 7. An agreement dated July 28, 1995, among Byron-Bethany Irrigation District, ACFCWCD-Zone 7, and the Department provides for the transfer of up to 5,000 acre-feet of nonproject water annually from BBID to ACFCWCD-Zone 7 through SWP facilities. BBID may only transfer real water that has been made available for transfer by conservation and land fallowing. In 1998, 2,000 acre-feet of SWP water were pumped at Banks Pumping Plant and delivered to ACFCWCD-Zone 7's turnouts in the South Bay Aqueduct.

Alameda County Water District. An agreement, dated September 29, 1998, among ACWD, KCWA, and the Department, provided for the delivery of a portion of ACWD's 1998 entitlement water and other water supplies, to be stored in, and later recovered from, groundwater basins within KCWA, in accordance with the ACWD and SWSW Banking Program Agreement. All return water is to be delivered to ACWD by December 31, 2035. The Department, ACWD, and KCWA signed similar delivery agreements for 1996 and 1997. These agreements were in accordance with the provisions of the Monterey Amendment. During 1998, the Department delivered 3,780 acre-feet of ACWD's 1998 SWP entitlement water for storage by SWSW.

Coachella Valley Water District and Desert Water Agency. An agreement dated January 28, 1999,

among the Department, CVWD, Desert Water Agency, Tulare Lake Basin Water Storage District, and Delta Lands Reclamation District No. 770, approved the conveyance and delivery of up to 30,000 acre-feet of flood-flow runoff from the Kaweah, Tule, and Kings rivers to CVWD and DWA. This flood runoff was diverted into the California Aqueduct through the Kern River-California Aqueduct Intertie and the Cross Valley Canal and was in excess of the amounts that can be used by the SWP under normal operations. DLRD had requested the Department to convey this flood runoff as non-SWP deliveries to reduce the amount of flood runoff that could damage lands within the Tulare Lake Bed. This agreement covered all flood runoff delivered from April 24, 1998, through July 31, 1998, or until there was no longer any Kaweah, Tule, and Kings rivers flood runoff that could not be utilized by the SWP. Flood runoff totaling 12,547 acre-feet was delivered to DWA and 7,609 acre-feet was delivered to CVWD.

Dudley Ridge Water District. A letter agreement, dated February 26, 1998, approved the delivery of up to 10,000 acre-feet of DRWD's 1998 interruptible water and up to 10,000 acre-feet of DRWD's 1998 SWP entitlement water to the Kern Water Bank and the return of a like amount of water by December 31, 2008. The Department approved similar agreements in 1996 and 1997. During 1998, the actual amount of interruptible water delivered to KWB was 984 acre-feet; entitlement water delivered was 4,941 acre-feet.

Dudley Ridge Water District. An agreement, dated May 22, 1998, among DRWD, TLBWSD, and the Department, approved a change in point of delivery of up to 1,000 acre-feet of DRWD's annual SWP entitlement water to Repayment Reach 8C. TLBWSD has the capability to convey a portion of DRWD's entitlement water from Reach 8C to the northern section of DRWD not served by DRWD's conveyance facilities. The agreement will remain in effect through December 31, 2035. A 1-year agreement to provide this water service was executed in 1996. During 1998, the total amount delivered to TLBWSD under this agreement was 90 acre-feet.

Dudley Ridge Water District. A letter agreement, dated June 30, 1998, between the Department and DRWD, obtained DRWD's concurrence with the

1997 Groundwater Recovery Program. In August 1997, 2,670 acre-feet of DRWD's 1997 entitlement water was delivered to Reach 12E of the California Aqueduct in exchange for a like amount of the Department's reserved water, as defined in the 1995 Recovery Agreement between the Department and KCWA, stored in the KWB.

Dudley Ridge Water District. A letter agreement dated September 25, 1998, between the Department and DRWD, approved the transfer of up to 300 acre-feet of DRWD's 1998 SWP entitlement water to Westlands Water District for a landowner in DRWD who also farmed in WWD. The water would be delivered to lands in Kings County that are within the SWP-permitted place of use. A total of 200 acre-feet was delivered to WWD.

Kern County Water Agency. A letter agreement dated January 30, 1998, between the Department and KCWA, approved the delivery of up to 120 acre-feet of Department of Fish and Game's 1997 wildlife habitat water to KCWA. The water was provided for under the August 19, 1974, agreement among the Department, DFG, and USBR for the development, management, and maintenance of wildlife habitat of project lands adjacent to the California Aqueduct in the San Joaquin Valley. The delivery was to facilitate an arrangement whereby KCWA delivered a like amount of water to DFG at the KWB for irrigation of wildlife habitat on the KWB for the Gamebird Heritage Program. Under the letter agreement, KCWA provided 118 acre-feet of local water to DFG, and was to schedule a like amount of DFG's water before May 15, 1998. However, due to abundant local water supplies brought on by El Niño, the letter agreement was extended through December 31, 1998. No water was delivered.

Kern County Water Agency. A letter agreement dated May 13, 1998, and amended August 26, 1998, between the Department and KCWA, approved the exchange of up to 20,000 acre-feet of KCWA 1998 SWP entitlement water for a like amount of WWD's CVP water. WWD would deliver up to 20,000 acre-feet of CVP water to KCWA during February through April 15, 1998, and KCWA would return a like amount during April 15 through December 31, 1998. The exchange involved reclassification of

some entitlement water delivered to KCWA during February through April 1998 as WWD exchange water. The SWP water was delivered to WWD via Reach 7 of the California Aqueduct in Kings County for use within the SWP service area. The total amount of 20,000 acre-feet was exchanged in 1998.

Kern County Water Agency. A letter agreement dated April 13, 1998, between the Department and KCWA, approved the exchange of up to 3,000 acre-feet of KCWA 1998 SWP entitlement water for a like amount of CVP water purchased by WWD. The CVP water will be delivered to KCWA via the Friant-Kern Canal for recharge. SWP water will be delivered to WWD via Reach 7 of the California Aqueduct in Kings County for use within the SWP service area. A total of 2,600 acre-feet was exchanged.

Kern County Water Agency. A letter agreement dated June 23, 1998, between the Department and KCWA, approved the transfer of up to 35,435 acre-feet of KCWA's 1998 SWP entitlement water to WWD. The agreement facilitated a water transfer from landholders within three member units of the agency—Lost Hills Water District, Berrenda Mesa Water District, and Belridge Water Storage District—to lands they farmed in WWD. Similar transfers were approved by the Department in 1996 and 1997. The actual amount of water transferred from KCWA to WWD in 1998 was 32,435 acre-feet.

Kern County Water Agency. A letter agreement dated August 31, 1998, between the Department and KCWA, approved the exchange of up to 100,000 acre-feet of KCWA's 1997 SWP entitlement water to WWD for a like amount of return water from WWD as follows:

- SWP entitlement water for Friant-Kern Canal Water—an exchange to facilitate the water purchase by a landowner from WWD. Up to 10,000 acre-feet of KCWA's entitlement water would be exchanged for water from the Friant-Kern Canal. This exchange was completed in 1998.
- SWP entitlement water for Kern River water (La Hacienda, Incorporated)—an exchange to facilitate the Kern River water purchase by WWD from Nickel Limited Liability Company. Up to

35,000 acre-feet of KCWA's entitlement water would be exchanged for the Kern River water that would be delivered from Lake Isabella storage. The exchange was completed in 1998.

- SWP entitlement water for future imported water payback—an exchange of up to 35,000 acre-feet of KCWA's entitlement water for a like amount of CVP water or other imported water from WWD in future years.
- SWP entitlement water for banked CVP section 215 water—an exchange to facilitate the purchase of banked CVP Section 215 water and floodwater from the Friant-Kern Canal by Harris Ranch, a WWD landowner. The water was acquired from Westside Mutual Water Company, a participant in the Kern Water Bank. Up to 20,000 acre-feet of KCWA's entitlement water would be exchanged for the banked water. Due to lower than anticipated water demands, Harris Ranch delayed the delivery of exchange water and made arrangements with a water user in TLBWSD to take delivery of up to 20,000 acre-feet of KCWA's entitlement water by December 31, 1998. To complete the originally approved exchange, up to 20,000 acre-feet of TLBWSD's 1999 entitlement water would be delivered to WWD during March 1 to July 15, 1999, for Harris Ranch. A letter agreement between the Department, KCWA, and TLBWSD, dated December 30, 1998, approved the delivery of KCWA's 1998 SWP entitlement water to TLBWSD and the exchange of up to 20,000 acre-feet of TLBWSD's 1999 SWP entitlement water with WWD.

A total of 83,100 acre-feet was exchanged under the August 31, 1998, agreement.

Kern County Water Agency. A letter agreement dated August 20, 1997, between the Department and KCWA approved the exchange of up to 12,000 acre-feet of KCWA's 1997 SWP entitlement water to WWD for a like amount of pre-1914 water right water purchased by WWD. The return water will be delivered from the Friant-Kern Canal to KCWA for recharge. The letter agreement was amended on December 12, 1997, to increase the exchange limit to 20,000 acre-feet, and, on April 15, 1998, to allow deliveries of carryover 1997 entitlement water through January 25, 1998. A total of 1,684 acre-feet

was delivered to WWD in 1998 under this agreement.

Kern County Water Agency. A letter agreement dated July 15, 1998, among KCWA, TLBWSD, and the Department, approved the transfer of up to 1,500 acre-feet of KCWA's 1998 SWP entitlement water to TLBWSD. The water was transferred from LHWD, a member unit of KCWA, to Westlake Farms located within the service area of TLBWSD. The transferred water is used to create wetland habitat for shore birds as required under a mitigation agreement between the Regional Water Quality Control Board and LHWD for the operation of LHWD's evaporation basin. A total of 1,000 acre-feet was transferred. Similar transfers were approved by the Department in 1996 and 1997.

Kern County Water Agency. An agreement dated December 15, 1998, between the Department and KCWA, approved the introduction of KCWA's groundwater, surface water, floodwater, or other local supplies into the California Aqueduct using the Cross Valley Canal Turnout. Separate existing or future point of delivery, exchange, re-regulation, or floodwater agreements would also be required in addition to this agreement. This agreement terminates on January 1, 2035.

Metropolitan Water District of Southern California. A letter agreement dated April 10, 1998, between MWD and the Department, approved the delivery of approximately 6,000 acre-feet of floodwater stored in the West Branch reservoirs to MWD's turnouts in Reach 30 of the California Aqueduct. Heavy rains had filled the West Branch reservoirs to their maximum levels and the Department needed to meet its contractual obligations with the Los Angeles Department of Water and Power. The Department was obligated to provide 5,000 to 6,000 acre-feet of reservoir capacity in Pyramid Reservoir to allow LADWP to utilize the Pyramid-Elderberry-Castaic complex for daily pump-back and power generation operations. Instead of releasing this local floodwater to the ocean, this letter agreement provided for its delivery to MWD. The floodwater was not considered normal SWP entitlement water and was delivered without the normal SWP entitlement water charges since no SWP pumping facilities were used to convey the floodwater. A total of 10,121 acre-feet

of floodwater was delivered between April 9 through April 23, 1998.

Metropolitan Water District of Southern California.

A letter agreement dated August 28, 1997, between MWD and the Department, approved the exchange of up to 52,000 acre-feet of MWD's 1997 SWP entitlement water to USBR in return for a like amount of water acquired by USBR for delivery to MWD by May 31, 1998. The actual amount of water exchanged with USBR was 37,000 acre-feet. USBR returned 25,900 acre-feet in 1997 and 11,100 acre-feet in 1998.

Metropolitan Water District of Southern California.

A letter agreement dated September 17, 1998, amended the December 29, 1997, letter agreement among the Department, MWD, KCWA, and Arvin-Edison Water Storage District, that approved the delivery of up to 20,000 acre-feet of MWD's 1997 SWP entitlement water to KCWA for storage in AEWS's groundwater basin by February 28, 1998. The amendment approved an increase for a total delivery of up to 75,000 acre-feet of MWD's entitlement to AEWS's groundwater basin for storage by December 20, 1998. A total of 18,761 acre-feet of MWD's 1998 entitlement water was delivered to groundwater storage. Also, 8,797 acre-feet of carryover from 1997 was stored in AEWS's groundwater basin in 1998. Additionally, MWD stored 31,450 acre-feet of 1998 entitlement and 1,833 acre-feet of 1997 carryover in SWSD under a separate agreement.

Mojave Water Agency. A letter agreement for the change in point of delivery, dated November 13, 1997, among MWA, AVEKWA, and the Department, approved the delivery of up to 2,250 acre-feet of MWA's entitlement of AVEKWA. A total of 1,345 acre-feet of MWA's 1998 entitlement water was delivered to AVEKWA.

Oak Flat Water District. A letter agreement dated August 6, 1998, between the Department and OFWD, approved the transfer of up to 300 acre-feet of OFWD's 1998 SWP entitlement water to the Tracy Golf and Country Club. The club needed an emergency supply of water due to the failure of their

existing well. This transfer allowed the club time to either repair the existing well or develop another permanent water source. A total of 115 acre-feet was delivered to the country club.

Santa Clara Valley Water District. The agreement, dated September 19, 1998, among SCVWD, KCWA, and the Department, provided for the delivery of a portion of SCVWD's 1998 SWP entitlement water and other water supplies, to be stored in and later recovered from groundwater basins within KCWA, in accordance with the Santa Clara and Semitropic Water Storage District Banking Program Agreement. The stored water is to be returned to SCVWD by year 2035. This was in accordance with the provisions of the Monterey Agreement that encourage operational flexibility for the SWP, such as groundwater storage of SWP water outside a contractor's service area for later use within the service area. Similar agreements were approved by the Department in 1996 and 1997. The amount of 1998 entitlement water delivered to SWSD pursuant to this agreement was 23,800 acre-feet.

Solano County Water Agency. A letter agreement dated July 3, 1998, among the Department, SCWA, and Mojave Water Agency, approved the exchange of up to 2,000 acre-feet of SCWA's 1998 SWP entitlement water to MWA for the return of up to 1,000 acre-feet of MWA's future SWP entitlement water or other future water supply as mutually agreed to by MWA and SCWA, and approved by the Department. The water is to be returned by December 31, 2008, during a dry year. A similar agreement was executed in 1997. The full amount was delivered to MWA in 1998.

Tulare Lake Basin Water Storage District. A letter agreement, dated April 12, 1998, between the Department and TLBWSD, approved the transfer of up to 3,000 acre-feet of TLBWSD's 1998 SWP entitlement water to WWD. The agreement facilitated the water transfer from Hansen Ranches, a landowner in the TLBWSD, to lands farmed in WWD under the name of Vista Verde Farms, Incorporated. The actual amount transferred was 3,000 acre-feet. Similar transfers were approved by the Department in 1996 and 1997.

Tulare Lake Basin Water Storage District, Kern County Water Agency, and Metropolitan Water District of Southern California. An agreement, dated December 23, 1998, among the Department, TLBWSD, MWD, KCWA, and Western Water Company, approved an exchange of up to 1,000 acre-feet of non-SWP water for a like amount of KCWA 1998 SWP entitlement water. The water was TLBWSD's surplus Kern River water purchased by WWC and sold to Santa Margarita Water District, a member agency of MWD. The Department conveyed to MWD, as non-SWP water, up to 1,000 acre-feet of 1998 entitlement water originally scheduled for delivery to KCWA. TLBWSD exchanged the 1,000 acre-feet of local Kern River water with KCWA for the like amount of KCWA's 1998 entitlement water that was delivered to MWD. The Department accepted the non-SWP exchange water on behalf of MWD at Reach 13B on or before December 31, 1998, and delivered the exchange water to MWD at Reach 26A. A total of 1,000 acre-feet was exchanged. This exchange was classified as general wheeling to MWD.

Turnout Agreements

Antelope Valley-East Kern Water Agency. An agreement dated December 16, 1998, between the Department and AVEKWA, allowed the construction, operation, and maintenance of the 95th Street East Turnout, located at milepost 357.52, Reach 22A on the East Branch of the California Aqueduct. The turnout has a design capacity of 13 cfs.

Agreements Related to the Monterey Amendments

Turnback Water Pool Program. Under Article 56(d) of the Monterey Amendments, the third year of the Turnback Water Pool Program was initiated through Notice to the State Water Project Contractors No. 98-03, dated January 29, 1998. All SWP contractors who signed Monterey Amendments were permitted to participate in the program. The program allowed SWP contractors to offer a portion of their approved 1998 entitlement for sale in a turnback pool for use outside their service area. Other contractors interested in purchasing this water could then request a portion or all of it. Based on supply and demand,

the turnback water was allocated among the selling and purchasing contractors.

Transactions for pool A occurred in January and February 1998; transactions for pool B occurred in March 1998. Turnback water sold for 50 percent of the Delta Water Rate per acre-foot through pool A and for 25 percent of the Delta Water Rate per acre-foot through pool B. All money collected through the turnback pool program was paid to the selling contractors. The 1998 Turnback Water Pool Program closed April 1, 1998.

The following contractors participated in pool A of the Turnback Water Pool Program:

- County of Butte sold 30 acre-feet;
- SLOCFCWCD sold 132 acre-feet;
- SBCFCWCD sold 463 acre-feet;
- AVEKWA sold 3,195 acre-feet;
- CLWA sold 1,147 acre-feet;
- SBVMWD sold 4,272 acre-feet;
- SGVMWD sold 361 acre-feet;
- DRWD purchased 7,300 acre-feet; and
- TLBWSD purchased 2,300 acre-feet

The following contractors participated in pool B of the Turnback Water Pool Program:

- County of Butte sold 370 acre-feet;
- SLOCFCWCD sold 2,174 acre-feet;
- SBCFCWCD sold 10,773 acre-feet;
- AVEKWA sold 70,685 acre-feet;
- CLWA sold 18,853 acre-feet;
- SBVMWD sold 75,828 acre-feet;
- SGVMWD sold 10,437 acre-feet;
- DRWD purchased 3,000 acre-feet;
- TLBWSD purchased 12,300 acre-feet;
- CVWD purchased 55,000 acre-feet; and
- DWA purchased 20,000 acre-feet.

The Department purchased the remaining 98,820 acre-feet of turnback water.

Other Administrative Actions

Kern River Intertie. From April through July 1998, the Department accepted 188,048 acre-feet of flood-water flows into the California Aqueduct from the

Kern River Intertie. Under a 1975 agreement among the Department, KCWA, and Buena Vista Water Storage District, floodwater from the Kern River and other water that enters the Kern River downstream of Lake Isabella, such as Friant-Kern Canal water, can be diverted into the California Aqueduct to alleviate flooding in Kern and Tulare counties. A total of 167,892 acre-feet of the floodwater was used to satisfy existing SWP demands downstream of the Intertie in accordance with the 1975 agreement. The other 20,156 acre-feet was delivered to DWA, CVWD, and MWD.

Dudley Ridge Water District. By letter dated January 22, 1998, the Department approved the 1998 delivery of up to 6,000 acre-feet of DRWD's 1998 SWP entitlement water to lands adjacent to DRWD's service area within Kings County. DRWD had already begun annexation proceedings for these lands. The Department's approval was contingent upon Kings County Board of Supervisors approving delivery of this water to Kings County lands prior to completion of the annexation by Dudley Ridge. No water was delivered.

Miscellaneous Agreements with Other Agencies

In addition to negotiating agreements with SWP contractors to provide for specified water deliveries, the Department also entered into several agreements with other agencies for water conveyance, or exchange, between January 31, 1998, and December 31, 1998.

Water Conveyance Agreements—CVP Water

The Department regularly enters into agreements to convey CVP water, such as agreements with contractors receiving water from USBR through the Cross Valley Canal, a water conveyance facility that connects with the Aqueduct near Tupman in Kern County. Other agencies or corporations receive CVP water through agreements between the Department and USBR, including the U.S. Department of Veterans Affairs, U.S. Fish and Wildlife Service, and Musco Olive Products, Inc. Occasionally, the Department also enters into agreements with USBR to convey CVP or SWP water from the Delta to O'Neill Forebay through CVP or SWP facilities. Some of

these agreements allow USBR to make up for curtailed water exports from Tracy Pumping Plant associated with improving conditions for fish in the Delta. Other agreements allow replacing water exports foregone during maintenance and repair of the Tracy and Banks pumping plants and CVP and SWP conveyance facilities between the Delta and O'Neill Forebay.

Cross Valley Canal. The CVC is used by eight CVP water contractors to obtain water from the California Aqueduct either by exchange with other agencies or, in the case of two contractors, by direct delivery. The eight water contractors are: County of Fresno, County of Tulare, Hill's Valley Irrigation District, Kern-Tulare Water District, Lower Tule River Irrigation District, Pixley Irrigation District, Rag Gulch Water District, and Tri-Valley Water District. These agencies have had uninterrupted water conveyance service by the Department since 1975/1976 through:

- individual three-party contracts with the Department and USBR, executed in 1975 and 1976;
- individual amendments to those contracts, signed on December 28, 1995; and
- two-year interim renewal contracts signed February 29, 1996, and further renewed on February 20 through February 27, 1998.

Between January 31, 1998, and December 31, 1998, the Department executed agreements with CVC contractors as follows:

- On March 9, 1998, LTRID and PID requested the Department change the point of delivery for their full 1998 CVP entitlement water from the CVC turnout to turnouts in reaches 4 through 7 of the California Aqueduct for delivery to WWD. The Department and the two districts executed individual agreements on November 9, 1998, for Department conveyance of up to 31,102 acre-feet of water for each district, of which 6,750 acre-feet for each district were delivered to WWD. Between February 20 and February 27, 1998, the Department executed eight 3-party interim renewal contracts with USBR and the CVC contractors for Department conveyance of up to 128,300 acre-feet of CVP water per year. Under these contracts, the Department agreed to transport the water from the Delta to the CVC

turnout in Reach 12E of the California Aqueduct. The contracts will be in effect through February 29, 2000. At that time, if all appropriate environmental reviews have been completed, 25-year contracts may be negotiated upon request of the CVC contractors.

Musco Olive Products, Inc. An annual agreement dated January 20, 1998, between the Department and USBR, provided for the conveyance of up to 400 acre-feet of CVP water to Reach 2A of the California Aqueduct for use by Musco Olive Products, Inc. This water was to be conveyed from January 1, 1998, through December 31, 1998. A total of 364 acre-feet was delivered.

U.S. Department of Veterans Affairs. An annual agreement, dated January 15, 1998, between the Department and USBR, approved the conveyance of up to 450 acre-feet of CVP water to Reach 2B of the California Aqueduct for use by the U.S. Department of Veterans Affairs at the San Joaquin Valley National Cemetery. The water was to be conveyed from January 1, 1998, through December 31, 1998. A total of 34 acre-feet was delivered.

U.S. Fish and Wildlife Service Cooperative Agreement. USBR initiated a cooperative agreement with the Department to deliver CVP water to the Kern National Wildlife Refuge for USFWS. Under the terms of this cooperative agreement, dated September 9, 1994, up to 26,530 acre-feet of CVP water would be delivered from Check 21 to the Buena Vista Water Storage District Turnout BV-1B, on Reach 10A of the California Aqueduct, from October 1, 1993, through April 10, 1995. Since the cooperative agreement was signed, six modifications to the agreement have been executed. Under Modification No. 001, dated October 31, 1994, additional funding was provided. Modifications were made each year to the agreement. The latest modification, No. 006, dated January 1, 1998, extended the agreement through April 10, 1999, and defined the water delivery rates for 1999. The Department conveyed 14,081 acre-feet for USBR to the Kern National Wildlife Refuge in 1998.

U.S. Bureau of Reclamation. By letter dated March 23, 1998, USBR agreed to convey SWP water

through the Tracy Pumping Plant and the Delta Mendota Canal to O'Neill Forebay. Under this agreement, USBR transported 14,220 acre-feet of SWP water in 1998. The change in point of diversion was necessary to minimize disruptions to SWP operations due to emergency repairs performed at Pool 10 of the California Aqueduct. To repay this water conveyance to USBR, the Department and USBR executed an agreement dated August 5, 1998.

Water Conveyance Agreements—Non-CVP Westlands Water District—Kings River Water.

An agreement dated March 30, 1998, between the Department and WWD, approved delivery of up to 20,000 acre-feet of Kings River water from the Mendota pool through reaches 5, 6, and 7 of the California Aqueduct. This water was made available to WWD from flood control releases from Pine Flat Reservoir, via the Kings River and Fresno Slough, pursuant to an agreement between WWD and Kings River Water Association dated January 31, 1998. During 1998, the Department conveyed 7,117 acre-feet of Kings River water to WWD.

Other Agreements—Turnouts

In 1998, there were no turnout agreements with any miscellaneous agencies.

Amendments to Miscellaneous Agreements with Other Agencies

Musco Olive Products, Inc. An annual agreement, dated December 26, 1996, between the Department and USBR, provided for the conveyance of up to 300 acre-feet of CVP water to Reach 2A of the California Aqueduct for use by Musco Olive Products, Inc. This water was to be conveyed from January 1, 1997, through December 31, 1997. At the request of MOP, on January 20, 1998, the Department amended the agreement to revise the water conveyance amount to a maximum of 400 acre-feet.

Water Deliveries

The SWP delivers water for a variety of beneficial uses. In addition to delivering entitlement water to long-term water supply contractors, the SWP:

Figure 9-1
Water Delivered in Calendar Year 1998 and Delivery Locations
of Long-Term Water Supply Contractors and Districts in the Feather River Area
with Water Right Agreements with the Department

- conveys water to and stores water for other public agencies through special contracts and agreements;
- provides water for wildlife and recreational uses; and
- stores, releases, and delivers local runoff water from SWP facilities to agencies that hold local water rights.

In 1998, 2,755,335 acre-feet of water were conveyed to 27 long-term contractors and 16 other agencies. That amount includes:

- 1,745,807 acre-feet of entitlement water¹, with 1,527,385 acre-feet delivered to long-term contractors, 123,019 acre-feet transferred to or exchanged with WWD, 115 acre-feet transferred to Tracy Golf Course and Country Club, 75,000 acre-feet of purchase pool water, and 20,288 acre-feet of interruptible water;
- 2,108 acre-feet of entitlement-related water for recreation, fish and wildlife; and
- 1,007,420 acre-feet of nonentitlement water delivered to satisfy water rights settlement agreements and agreements made with SWP contractors and other agencies, including USBR.

Figure 9-1 shows amounts of water delivered to various locations during 1998.

Specific information about water deliveries made to long-term contractors and other agencies during 1998 and historical deliveries from 1962 through 1998 are presented in the following three sections, each with a corresponding table:

- water delivered and future credits granted to long-term contractors in 1998 (Table 9-3);
- water delivered in 1998 by month (Table 9-4); and
- annual water entitlements and water conveyed, by water type, from 1962 through 1998 (Table 9-5).

¹ Annual entitlement water is the amount of SWP water long-term contractors may request each year in accordance with Article 12(a), "Procedure for Determining Water Delivery Schedule," of their water supply contract.

Water Deliveries and Credits to Long-Term SWP Contractors

Table 9-3 shows amounts of water delivered in 1998 and future entitlement credits granted to long-term contractors through 1998. The following information about specific columns in Table 9-3 is arranged by column number.

1998 Entitlement Water Delivered. Columns 1 through 4 show a detailed breakdown of entitlement water delivered to long-term water supply contractors in 1998.

1998 Interruptible Water. Column 5 shows 20,288 acre-feet of 1998 interruptible water delivered to long-term water supply contractors in 1998.

1997 Carryover Entitlement Water Delivered During 1998. In some instances, with the Department's approval, contractors may delay delivery of entitlement water to the next year (also known as carryover entitlement water). Column 6 shows 37,252 acre-feet of entitlement water was carried over from 1997 for delivery in 1998.

Article 12(d) Water. No Article 12(d) water was delivered in 1998. (See column 7.)

Article 14(b) Water. Column 8 shows 17,180 acre-feet of 1997 entitlement water delivered in 1998 under Article 14(b) of MWD's long-term water supply contract due to SWP outages in 1997.

Purchase Pool A Water. No Purchase Pool A water was delivered in 1998. (See column 9.)

Purchase Pool B Water. Column 10 shows 75,000 acre-feet of Purchase Pool B water delivered to two long-term water supply contractors in 1998.

Total Entitlement Water Delivered. Column 11 shows all entitlement water delivered in 1998—a total of 1,745,807 acre-feet. This amount includes 123,019 acre-feet of entitlement water transferred to or exchanged with WWD and 115 acre-feet of entitlement transferred to Tracy Golf Course and Country Club.

Other Water Deliveries. Column 12 includes deliveries of water other than entitlement water, such as

deliveries of nonproject water, to long-term water contractors. Nonproject water is generally local water that a SWP contractor has a water right to, or water purchased from or exchanged with non-SWP agencies. The water is conveyed by the Department and in some instances stored in SWP facilities under special agreements for future deliveries.

In 1998, other water deliveries totaled 99,252 acre-feet.

Total Deliveries. Column 13 shows total amounts of water delivered to long-term contractors. In 1998, the SWP delivered 1,845,059 acre-feet to 27 long-term contractors. This amount included 1,745,807 acre-feet of entitlement water and 99,252 acre-feet of nonproject water.

Carryover Water Approved for Delivery. For several years, the Department has offered contractors the opportunity to carry over a portion of their entitlement water approved for delivery in the current year for delivery during the next year. The carryover program was designed to encourage the most effective and beneficial use of water and to avoid obligating the contractors to use or lose the water by December 31 of each year. The SWP contractors' long-term contracts and amendments state the criteria of carrying over entitlement water from one year to the next. The exception is EWSID's contract, which has an ongoing carryover program with terms and conditions specified in an agreement between the Department and the district dated October 1, 1979.

In 1998, since all the SWP storage facilities were needed for project water, no carryover water was approved for future delivery.

Water Delivered in 1998, by Month

During 1998, the SWP provided water service to 43 agencies, including 27 long-term water contractors. Those agencies and the amounts of water delivered to them by month are listed in Table 9-4.

This section and the accompanying table summarize water deliveries for 1998. Information about those deliveries is categorized as SWP water and nonproject water.

State Water Project Water

SWP water is classified into the following categories:

Entitlement water

- current year entitlement (1998)
- interruptible entitlement (1998)
- transfer and exchange entitlement (1998)
- carryover entitlement (1997)
- Benicia and Vallejo entitlement (1998)
- stored entitlement (1998)
- Pool B entitlement (1998)
- makeup 14(b) entitlement (1997)

Recreation and fish and wildlife water

- enhancement
- mitigation

Operational flood release water

- operational flood release

The SWP may approve exchanges and transfers of entitlement water among various contractors if certain conditions are met. The SWP may temporarily loan water to contractors if satisfactory arrangements are made for repayment and water is available within the system.

In 1998, SWP water was delivered in the following classifications and amounts.

Entitlement Water. A total of 1,745,807 acre-feet of 1998 entitlement water was delivered to 27 long-term contractors.

Transfers and Exchanges of Entitlement Water.

During 1998, a total of 147,569 acre-feet of entitlement water was transferred to or exchanged between SWP long-term contractors and non-SWP water agencies as follows:

- SCWA exchanged with MWA, 2,000 acre-feet;
- DRWD transferred to WWD, 200 acre-feet;
- DRWD transferred to TLBWSD, 90 acre-feet;
- KCWA exchanged with WWD, 85,700 acre-feet;
- KCWA transferred to WWD, 34,119 acre-feet;
- KCWA exchanged with TLBWSD and WWD, 20,000 acre-feet;
- KCWA transferred to TLBWSD, 1,000 acre-feet;
- OFWD transferred to Tracy Golf Course and Country Club, 115 acre-feet;
- TLBWSD transferred to WWD, 3,000 acre-feet; and
- MWA transferred to AVEKWA, 1,345 acre-feet.

^a Exchange entitlement with Tulare from Delta to Reach 13B then, wheeled to Reach 26A for delivery as nonentitlement water to Western Water Company through MWD.

^b DCVWLN* water transferred to Westlands Water District from Lower Tule River and Pixley ID.
 * (DCVWLN* = Water wheeled by DWR directly to Cross Valley Canal Contractors.)

^c Transfer of Oak Flat entitlement water

^d Kern National Wildlife Refuge USBR.

^e 1997 Exchange between USBR and MWD. Remainder to be delivered in 1999.

^f 1998 Wheeling Exchange Agreement between USBR and the Department for 14,220 AF. O'Neil Forebay was used to compensate for the difference between the agreement amount and the amounts wheeled between the parties.

^g Exchange entitlement water from Kern County WA from the Delta to reach 13B. Reclassified to nonproject water and wheeled to reach 26A for delivery to Western Water Company through MWD.

^a Includes interruptible deliveries (1994, 1995, 1996, 1997, and 1998).

^b Values include amounts of deliveries to short-term contractors (Mustang Water District, 1970-1972; Tracy Golf and Country Club, 1974, 1979, and 1980; Green Valley Water District, 1974, 1975, 1978, 1979, 1980, and 1985; Granite Construction Company, 1980).

^c Includes amounts of SWP nonentitlement and non-SWP water conveyed for SWP and non-SWP water contractors.

^d Includes amounts of water diverted under various water rights agreements.

^e Amounts reflect net effect of (1) operational losses from SWP transportation facilities; (2) changes in reservoir storage south of Delta; (3) storable local inflows to SWP reservoirs; (4) side inflow to San Luis Canal; and (5) inflow into California Aqueduct from Kern River Intertie.

^f Includes 37,170 acre-feet of entitlement water carried over from 1985.

^g Includes 12,270 acre-feet of surplus water carried over from 1985.

^h Includes 639 acre-feet of 1988 entitlement water delivered during 1987 and 16,171 acre-feet of entitlement water recaptured from groundwater storage.

ⁱ Includes 67,581 acre-feet of 1987 entitlement water delivered in 1988 and 8,749 acre-feet recaptured from groundwater storage.

^j Includes 149,880 acre-feet of 1988 entitlement water delivered in 1989 and 89 acre-feet of 1990 entitlement water delivered during 1989.

^k Includes 128,546 acre-feet of 1989 water delivered in 1990.

^l Includes 27,075 acre-feet of 1990 entitlement water and 148 acre-feet of 1992 entitlement water delivered in 1991.

^m Includes 92,282 acre-feet of 1991 entitlement water delivered in 1992; 3,484 acre-feet of make-up water; and 72,000 acre-feet recaptured from water storage (including 57,171 acre-feet of Groundwater Demonstration Program water).

An exchange between TLBWSD, MWD, KCWA, and WWC of 1,000 acre-feet was classified as general wheeling to MWD rather than an exchange.

Other Exchanges of Entitlement Water. In 1998, a total of 31,100 acre-feet of nonproject water was exchanged for project water as follows:

Kern County Water Agency. In a letter agreement between KCWA and the Department, dated April 2, 1997, WWD exchanged 20,000 acre-feet of its CVP water, stored by USBR in San Luis Reservoir, for an equivalent amount of KCWA's entitlement water. KCWA took delivery of the CVP water during February, March, and April.

Metropolitan Water District of Southern California. A letter agreement dated August 28, 1997, between MWD and the Department, approved the exchange of up to 52,000 acre-feet of MWD's 1997 SWP entitlement water to USBR in return for a like amount of water acquired by USBR for delivery to MWD by May 31, 1998. The actual amount of water exchanged with USBR was 37,000 acre-feet. USBR returned 25,900 acre-feet in 1997 and 11,100 acre-feet in 1998.

Carryover Entitlement Water. A total of 37,252 acre-feet of 1997 entitlement water was carried in SWP storage facilities and delivered in 1998.

Interruptible Entitlement Water. The interruptible entitlement water program allows a contractor to take delivery of water over the approved and scheduled allocations for the current year. Interruptible water is available for delivery on a short-term basis as determined by the Department, when scheduled project demands are being delivered and operational requirements for project water deliveries, water quality, and other requirements are being met.

In 1998, four contractors participated in the program. A total of 20,288 acre-feet of interruptible water was delivered to SCWA, County of Kings, DRWD, and TLBWSD.

Water for Recreation and Fish and Wildlife. A total of 2,108 acre-feet of SWP water was conveyed for recreational use and enhancement of fish and

wildlife. Of this total, 1 acre-foot was conveyed in Butte County.

Recreational Use. The SWP delivered 549 acre-feet of water for facilities at Lake Del Valle, O'Neill Forebay, Silverwood Lake, and Lake Perris. In addition, 1,222 acre-feet were delivered to Castaic Lake and Castaic Lagoon, an impoundment downstream from Castaic Lake devoted entirely to recreation.

Trout Fishery. No water was needed from the SWP in 1998 to maintain a trout fishery in Piru Creek as a condition of obtaining a license from the Federal Energy Regulatory Commission to develop a powerplant at Pyramid Lake.

Wildlife Management. The SWP delivered 336 acre-feet of water to use in managing wildlife in the Pilibos Wildlife Area, located on about 770 acres of land near O'Neill Forebay, 40 miles south of Los Banos.

Operational Flood Release Water

There was no operational flood release water delivered in 1998.

Non-State Water Project Water

In 1998, the Department used SWP facilities to convey non-SWP water for various agencies according to the terms of water rights and water transfer and exchange agreements. Detailed information concerning those conveyances follows.

Alameda County Flood Control and Water Conservation District-Zone 7.

Under a contract executed July 28, 1995, between the Department and ACFCWCD-Zone 7, the Department conveyed 2,000 acre-feet of non-SWP water for ACFCWCD-Zone 7 during 1998. The Department conveyed this water from August through October directly from the Delta to Reach 6 of the South Bay Aqueduct. ACFCWCD-Zone 7 purchased the rights to transfer this water from BBID under a separate contract.

Central Valley Project Water. In 1998, the Department conveyed 62,533 acre-feet of CVP water through SWP facilities. Conveyance was made in accordance with agreements negotiated with USBR and contractors receiving water from USBR through the Cross Valley Canal as follows:

Cross Valley Canal Contractors. Under two individual agreements between the Department and LTRID and PID, dated November 9, 1998, the Department conveyed 6,750 acre-feet of CVP water for each district to WWD's turnouts in Reach 4 and Reach 5 of the California Aqueduct.

Musco Olive Products, Incorporated. In accordance with terms of a conveyance agreement with USBR, dated January 20, 1998, the Department conveyed 364 acre-feet of CVP water to Reach 2A of the California Aqueduct for Musco Olive Products, Inc.

Recreational and Wildlife Use. In 1998, the Department conveyed 334 acre-feet of CVP water to DFG at O'Neill Forebay and WWD's Lateral 4L within Reach 5 of the joint-use facilities of the California Aqueduct.

U.S. Bureau of Reclamation. Under an agreement, dated August 5, 1998, the Department conveyed 14,190 acre-feet of CVP water through the California Aqueduct to O'Neill Forebay for USBR in repayment for 14,010 acre-feet of SWP water USBR conveyed for the Department during emergency repairs of the California Aqueduct in March and April 1998. Thirty acre-feet of SWP water were exchanged with USBR in O'Neill Forebay to handle the difference between the amount of CVP water the Department conveyed and the agreement. To handle the difference between the amount of SWP water that USBR conveyed and the agreement, 210 acre-feet of CVP water was exchanged with the Department in O'Neill Forebay.

U.S. Department of Veterans Affairs. Under an annual agreement with USBR, dated January 15, 1998, the Department conveyed 34 acre-feet through SWP facilities to maintain the San Joaquin Valley National Cemetery near Santa Nella, California. The Department conveyed this water to Reach 2B of the California Aqueduct.

U.S. Fish and Wildlife Service. The Department conveyed 14,081 acre-feet of CVP water for the USFWS according to provisions of an amended cooperative agreement initiated by USBR dated September 9, 1994. The water was conveyed to the Kern National Wildlife Refuge through Reach 10A of the California Aqueduct.

Westlands Water District. The Department conveyed 20,000 acre-feet of WWD's CVP water to KCWA during February through April 15, 1998, for a like amount from KCWA to WWD delivered from April 15 through December 31, 1998. A letter agreement between the Department and KCWA dated May 13, 1998, and amended August 26, 1998, approved the exchange.

Floodwater. Occasionally, during wet years, the Department accepts floodwater from the Kern River into the California Aqueduct through the Kern River-California Aqueduct Intertie—a facility located near Highway 119 in Kern County—for delivery to water agencies under agreements or to help satisfy SWP delivery demands downstream of the Intertie. This operation alleviates flooding of farmlands within the Kern River Interests service and surrounding areas. The Department accepts flood flows through the Intertie under an *Agreement among the State of California, Kern County Water Agency, and the Kern River Interests for Diversions of Floodwaters through the Kern River-California Aqueduct Intertie*, dated November 18, 1975. In 1998, the Department accepted 188,048 acre-feet of floodwater into the California Aqueduct for delivery as follows:

Desert Water Agency/Coachella Valley Water District. Under an agreement among CVWD, DWA, MWD, Delta Lands Reclamation District No. 770, TLBWSD, and the Department, dated April 18, 1997, the Department conveyed 20,156 acre-feet of water from Reach 13B of the California Aqueduct to MWD, at Reach 30, for ultimate delivery to DWA and CVWD. The Department conveyed this water during May and June of 1998.

State Water Project. The Department used the balance—167,892 acre-feet—of the floodwater accepted into the California Aqueduct to help satisfy SWP demands downstream of the Intertie.

Westlands Water District-Kings River Water. Under an agreement dated March 30, 1998, between the Department and WWD, the Department conveyed 7,117 acre-feet of Kings River Water to WWD through Reach 7 of the California Aqueduct.

Water Rights Water. Water in this category is transported through SWP facilities to long-term SWP

contractors and other agencies according to terms of various local water rights agreements. Some water simply passes through SWP transportation facilities; a portion is stored in SWP reservoirs for release at a later time. In 1998, 903,613 acre-feet of water in this category were delivered to the Feather River, South Bay, and Southern California areas.

Feather River Area. Nine nonproject agencies in the Feather River area received 872,738 acre-feet. Those agencies are:

- Last Chance Creek Water District (10,046 acre-feet);
- Thermalito Irrigation District (2,271 acre-feet);
- Oroville-Wyandotte Irrigation District (6,473 acre-feet);
- Western Canal Water District (241,797 acre-feet);
- Joint Water District Board (587,662 acre-feet);
- Tudor Mutual Water Company (2,112 acre-feet);
- Oswald Water District (851 acre-feet);
- Garden Highway Water Company (13,685 acre-feet); and
- Plumas Mutual Water Company (7,841 acre-feet).

South Bay Area. In the South Bay area, 30,358 acre-feet of local water were delivered to ACFCWCD-Zone 7 and ACWD. These two South Bay Aqueduct contractors hold water rights to runoff from the Lake Del Valle watershed.

Southern California. In Southern California, 517 acre-feet of local runoff from the Houston Creek watershed were stored and delivered to CLAWA under local water rights. These local water rights have been signed over to the Department as part of the contractual arrangements for storing and delivering this local runoff for the CLAWA.

Annual Water Entitlements and Water Delivered Since 1962

Information about annual water entitlements and water conveyed for the past 37 years is contained in Table 9-5. The following discussion of entitlements and water conveyed is arranged according to column numbers.

Annual Entitlements. Columns 1 through 7 of Table 9-5 show the amount of the long-term contractor's entitlement water by area for years 1962 through 1998 as specified in the entitlement schedules (Table A, Annual Entitlements) of the long-term water supply contracts.

In some instances these entitlement schedules—projections of each contractor's need for water to 2035—have been amended to meet the needs of individual contractors. The amounts of entitlement water each contractor may request for years 1962 through 2035 may be found in Table B-4, Annual Entitlements to Project Water, in Appendix B.

Water Delivered. Columns 8 through 16 show water delivered or conveyed, including initial fill water and operational losses and storage changes.

Entitlement Water. Column 8 shows amounts of entitlement water delivered each year from 1962 through 1998. In 1998, entitlement water delivered to 27 contractors totaled 1,745,807 acre-feet. That amount includes 20,288 acre-feet of 1998 interruptible entitlement water.

Surplus and Unscheduled Water. Surplus and unscheduled water is water in excess of that required to meet all demands for entitlement water and water to be stored in SWP reservoirs.

Column 9 shows amounts of surplus and unscheduled water delivered from 1962 through 1998. During 1993 through 1998, surplus and unscheduled water were not delivered.

Column 10 includes amounts of water classified as other water delivered in 1998, including nonproject water conveyed through SWP facilities and regulated delivery of local supply.

In 1998, a total of 134,682 acre-feet of other water was delivered.

Feather River Diversions. Column 11 includes amounts of water from the Feather River delivered according to agreements for water rights water. In 1998, a total of 872,738 acre-feet in this category was delivered to agencies in the Feather River area.

Recreation Water. Column 12 shows water conveyed for recreational use or to provide water to improve water quality for fish and wildlife. In 1998, a total of 2,108 acre-feet of SWP water was conveyed for this purpose.

Initial Fill Water. The quantities listed in Column 14 represent the amounts used to initially fill the aqueducts and reservoirs south of the Delta to maximum operating capacities. Initial filling began in 1962 with the filling of the South Bay Aqueduct and was completed in 1979 when Lake Perris reached its maximum operating capacity of 127,000 acre-feet. In

1996 and 1997, the Coastal Aqueduct was initially filled.

Operational Losses. Column 15 includes the total amounts of water lost through evaporation and seepage, net storage changes in reservoirs south of the Delta, and amounts of inflow from local drainage areas, including inflows into San Luis Canal and from the Kern River Intertie.

Negative values are indicated for years when withdrawals and evaporation from reservoirs south of the Delta exceed the amounts of water added to the reservoirs.

Information for this chapter was provided by the State Water Project Analysis Office.

Chapter 10
Power Resources

Construction of the interior of
Devil Canyon Powerplant

Significant Events

- In 1998, State Water Project plants consumed 3.45 billion kWh, generated 5.92 billion kWh of energy, and purchased or exchanged 4.43 billion kWh of energy.
- The Department purchased 2.29 billion kWh of energy in 1998 at a cost of \$39.72 million. Associated capacity costs were \$24.07 million.
- The Department sold 6.9 billion kWh of energy in 1998 to 36 utilities and 19 power marketers for total revenues of \$139.35 million. The Department also received \$16.44 million in revenues for capacity, exchanges, transmission arrangements, and ancillary services.
- The Oroville Relicensing Steering Committee was formed in April 1998 to help coordinate the Department's increasing preparatory activities for relicensing the Oroville Facilities.
- In 1998, the Department began evaluating the advantages and disadvantages of selling its share of Reid Gardner Unit 4. Nevada Power Company plans to sell its share of the plant, which it co-owns with the Department, when it merges with Sierra Pacific Power Company.
- To reduce the financial risk of potentially volatile energy prices from the sale of Reid Gardner Unit 4 surplus energy, the Department entered into an agreement with NPC to give NPC the sole use of the unit from June 1, 1998, through September 15, 1998. NPC paid the Department guaranteed contract rates for the energy used during this period.
- The California Independent System Operator and the California Power Exchange began operation on March 31, 1998. The ISO manages most of California's transmission grid and is responsible for system reliability. The CalPX serves as a broker for the sale and purchase of most of California's electricity supply.
- The Department relied on Pacific Gas & Electric and Southern California Edison as its scheduling coordinators to submit its energy schedules to the ISO until the Department became its own scheduling coordinator in July 1998.
- In July 1998, the Department started buying and selling—through the CalPX's day-ahead market—excess energy not purchased or sold through bilateral agreements.
- In August 1998, the Department started selling ancillary services to the ISO.
- Along with a majority of Western Systems Coordinating Council members, the Department voted in December 1998 to institute a Reliability Management System designed to protect the reliability of the western transmission network.

Long-term State Water Project contractors depend on the SWP to provide economical sources of power to deliver affordable water. Responding to that need, the Department developed and administers a comprehensive power resources program. Key elements of the program include the strategic timing of generation and pumping schedules, purchase of power resources and transmission services, short-term sales of power surpluses, and studies of power resources for future needs.

Power Resources Program

The goals of the SWP power resources program are to:

- obtain reliable, environmentally sensitive, and competitively priced power sources and transmission services sufficient to operate the SWP;
- develop and manage power resources to minimize the cost of water deliveries to SWP contractors;
- minimize impacts on the SWP when major contractual power arrangements begin to expire in 2004;
- meet responsibilities and criteria of the Western Systems Coordinating Council; and
- conform with regulations of the California Energy Commission and the Federal Energy Regulatory Commission.

To achieve these goals, the Department constructed its own power facilities and contracted for long-term power resources with many electric utilities. In addition, the Department arranged for transmission service between SWP power resources and pumping loads and interconnected utilities. The power resources program takes advantage of SWP water storage and conveyance capacities, which can allow the Department to operate SWP pumps somewhat independently of water delivery needs. This control of pumping loads and generation allows the Department to enter into advantageous agreements with other electric utilities, which

complement the use of SWP generation to meet SWP power requirements.

Reliability Management System

In 1996, electrical disturbances on local transmission networks led to two major outages of the interconnected transmission systems of several states, including California. In both instances, operation of the SWP, as well as that of numerous other major transmission-dependent systems, was adversely impacted.

After investigating these events, the WSCC proposed a program known as the Reliability Management System to address the reasons for the interconnected transmission system outages. RMS would have WSCC members replace voluntary reliability standards that impact transmission reliability with mandatory standards backed by monetary sanctions for noncompliance. WSCC members approved RMS in December 1998. The Department anticipates improving its SWP generator unit testing program and calibrating selected power system stabilizers to avoid sanctions. Additional measures may also financially impact the SWP in the future. Actual implementation of RMS was not scheduled until late 1999.

Oroville Facilities Relicensing

The existing 50-year hydroelectric license for the Oroville facilities will expire January 31, 2007. To obtain a new license, the Department must submit a relicensing application to FERC by January 31, 2005. Due to the intense interest in issues

examined during the relicensing process, many applicants have found the process to be very complex and lengthy. As a result, relicensing applicants for large projects typically begin preparatory work 8 to 10 years in advance of the existing license expiration.

In April 1998, the Department formed the Oroville Relicensing Steering Committee to provide guidance to staff involved in relicensing preparations. This committee is composed of managers and supervisors from Department organizations that will participate in the relicensing process. During 1998, the committee provided recommendations on policy issues, consultant roles, FERC licensing procedures, and formation of a Department relicensing team.

The Steering Committee will decide which relicensing process the Department should use to submit its application. FERC provides applicants with several choices that allow them to best match their unique relicensing situations. The choices range from the “traditional” process with less FERC involvement to the “alternative” processes with more FERC involvement and stakeholder interaction.

Potential Sale of Reid Gardner Unit 4

In early 1998, NPC announced plans to merge with Sierra Pacific Power Company. To enhance prospects for regulatory approval of the merger, NPC announced that both NPC and SPPC would sell all their generating plants if the merger is approved. The Department and NPC are co-owners of Reid Gardner Unit 4, a 275-MW coal powerplant. NPC has asked the Department to also sell its share of Reid Gardner Unit 4. The Department is considering that request. During 1998, the Department evaluated the advantages and disadvantages of selling its share of Reid Gardner Unit 4 as well as the fair market price for the powerplant and the allocation of sale proceeds between the Department and NPC. The Department will continue evaluations of these issues in 1999.

Restructuring of the Electric Utility Industry

On September 23, 1996, Assembly Bill 1890 was signed into law by the Governor. AB 1890 called

for restructuring the electric utility industry in California and creating the California Independent System Operator and the separate California Power Exchange. To make the new California markets viable and limit market power control, the investor-owned utilities (PG&E, SCE, and San Diego Gas and Electric Company) were required to unbundle their transmission, generation, and distribution into separate business units and divest half of their thermal generation. The investor-owned utilities were granted full recovery of their stranded costs through a competition transition charge.

On March 31, 1998, the ISO and CalPX began operation. The ISO manages most of California’s transmission grid and is responsible for overall system reliability. Scheduling coordinators were created to submit energy schedules to the ISO. All loads and resources within the ISO-controlled grid and resources imported or exported within California must schedule through these coordinators. The ISO operates the following three markets.

- Ancillary services market, which consists of voltage regulation, spinning, nonspinning, replacement reserves, voltage support, and black start. Voltage regulation, spinning, nonspinning, and replacement reserves are acquired through day-ahead and hour-ahead markets. Voltage support and black start are purchased on a yearly contract basis;
- Congestion management market, which uses adjustment bids to clear congestion on a transmission path; and
- Real-time imbalance market, which uses supplemental energy bids to maintain grid integrity by following the varying loads during real-time.

The CalPX schedules the loads and resources to the ISO as the scheduling coordinator for the three investor-owned utilities. The CalPX also operates the day-ahead market and the hour-ahead market for the purchase and sale of energy by other market participants.

The Department continued to participate in various “stakeholder” processes to resolve ongoing issues of concern, both before and after ISO and CalPX startup. Major issues included:

- discussions on the degree of participation of contract holders in ISO;
- conversion of existing transmission contracts to ISO service and receipt of financial rights from ISO as compensation;
- the appropriate valuation of the Department's remedial action system by ISO;
- development of ISO's transmission access charge and off-peak rates;
- unbundling ISO's grid management charge paid by scheduling coordinators to recover ISO's costs;
- reaching conformity between the investor-owned utilities' transmission owner's tariffs and ISO's tariff; and
- ISO's 13 and CalPX's 7 tariff amendments filed with FERC, covering operational issues discovered after ISO and CalPX started operations.

The Department operated under existing contracts and scheduled through PG&E and SCE until July 1998. In July, the Department signed the Scheduling Coordinator, Participating Generator, and Meter Service Agreements with ISO to become a scheduling coordinator and schedule directly with ISO. In August, the Department started selling spinning, nonspinning, and replacement reserves to ISO. The Department also signed the CalPX Participation Agreement in July 1998 and started buying and selling energy not purchased or sold through bilateral agreements in the CalPX's day-ahead market.

Existing SWP Power Facilities

Figure 10-1 shows the names, locations, and generation capability of the Department's primary power facilities.

Hydroelectric. Economic hydroelectric generation provides the largest share of SWP power resources. The combined 900-megawatt Hyatt Pumping-Generating Plant and Thermalito Pumping-Generating Plant (Hyatt-Thermalito) generate about 2.2 billion kWh of energy in a median water year, while the 3 MW from Thermalito Diversion Dam Powerplant add another 24 million kWh of energy a year.

Generation at SWP aqueduct recovery plants—Gianelli, Alamo, Devil Canyon, Warne, and Mojave Siphon—varies with the amount of water conveyed. These five plants generate about one-sixth of the total energy used by the SWP.

Coal. Since July 1983, the Department has received energy from Reid Gardner Powerplant, a coal-fired facility near Las Vegas, Nevada. Reid Gardner consists of four units. The Department owns 67.8 percent of Unit 4 (169.5 MW based on nameplate capacity of 250 MW), while NPC owns the remainder of Unit 4 as well as all of units 1, 2, and 3.

Since September 1998, the Department has received up to 245 MW (entitlement share) from Unit 4 (based on an upgraded generating capacity of 275 MW), subject to NPC's limited right to interrupt the Department's energy deliveries during specified periods. Whenever NPC interrupted the Department's scheduled energy, the Department received payment based on NPC's combustion turbine cost.

To reduce the financial risk of potentially volatile energy prices from the sale of Reid Gardner Unit 4 surplus energy, the Department entered into an agreement with NPC similar to the agreements for the summers of 1995 and 1996. Under this agreement, from June 1, 1998, through September 15, 1998, NPC had the sole use of Unit 4 to meet high energy demands during the hot summer months. NPC paid the Department guaranteed contract rates for the energy used during this period.

Future SWP Power Facilities

To meet future SWP power requirements, the Department also considers and evaluates new power resources, including reviewing SWP power requirements and analyzing the type of resource and its cost. Factors considered include:

- ability to meet anticipated power requirements for pumping;
- transmission access availability;
- anticipated water deliveries to contractors;
- cost of the resource;
- availability and cost of financing;

Figure 10-1
Names, Locations, and Generation Capability of Primary Power Facilities
(Capability May Differ from Nameplate Capacity)

- environmental impacts and costs of mitigation; and
- operating characteristics.

The Department continues to consider several potential power resources. These include a second unit at Alamo Powerplant, a third unit at Warner Powerplant, and additional capacity at Hyatt-Thermalito.

Contractual Resource Arrangements

Through joint development, exchanges, and purchases, the Department obtains a significant amount of capacity and energy for SWP operations from other utilities throughout California, the Northwest, and the Southwest. Under these agreements, the Department can sell, buy, or exchange energy.

Some agreements allow the Department to sell, buy, and/or exchange short-term firm capacity and/or firm energy on an hourly, daily, weekly, or monthly basis. Those agreements permit more efficient use of the Department's generating resources and more efficient scheduling of energy deliveries.

Negotiations continue with various utilities in the Pacific Northwest to develop arrangements for purchases, sales, and exchanges to take advantage of the Department's 300 MW transmission capacity on the Extra-High Voltage Pacific Northwest Intertie.

Joint Developments. In 1966, the Department entered into a contract with the Los Angeles Department of Water and Power for the joint development of the West Branch of the California Aqueduct. The LADWP constructed and operates Castaic Powerplant, which is electrically connected to the LADWP transmission system at the Sylmar Substation.

The Department receives capacity and energy at the Sylmar Substation based on weekly water schedules through the West Branch.

Gianelli Pumping-Generating Plant is a joint SWP (222 MW) and U.S. Bureau of Reclamation (202 MW) facility.

Power Exchanges. The largest portion of the energy used by the SWP is provided by the 1979 Power Contract and the 1981 Capacity Exchange Agreement with SCE. Service began in April 1983 under the Power Contract and in April 1987 under CEA.

According to terms of the Power Contract, the Department provides SCE with up to:

- 350 MW of capacity and approximately 40 percent of the energy from Hyatt-Thermalito;
- 120 MW of capacity and all the energy generated by Devil Canyon Powerplant Units 1 and 2; and
- 15 MW of capacity and all the energy generated by Alamo Powerplant.

In return, the Department receives off-peak energy from SCE equal to the amount of energy provided to SCE from Hyatt-Thermalito, Devil Canyon Powerplant, and Alamo Powerplant, plus an additional amount of energy as payment for the capacity. The amount of additional energy is determined annually based on the Capacity-Energy Exchange Formula defined in the 1979 Power Contract. The formula determines the value of capacity in dollars and converts the dollar amounts into an equivalent amount of off-peak energy.

According to terms of the CEA, each year the Department must provide 412.5 million kWh of energy to SCE during on-peak periods at a maximum delivery rate of 225 MW. SCE returns approximately 110 percent of the energy the Department provides during mid-peak and off-peak periods. In addition, SCE waives 75 percent of its charges to the Department for specified firm transmission service provided to SWP pumping and generating facilities. SCE also makes an annual payment of \$900,000 to the Department.

In addition, according to terms of the 1979 Power Contract, SCE receives energy from four of the Metropolitan Water District of Southern California powerplants—Lake Mathews, Foothill Feeder, San Dimas, and Yorba Linda. In return, the Department receives off-peak energy from SCE averaging 107 percent of the total energy provided to SCE

from those plants. All the energy from the fifth plant, Greg Avenue, is provided to LADWP according to a 1983 agreement between LADWP and the Department. The utility returns 98.8 percent of this energy to the Department during off-peak periods.

Purchases. The Department obtains a significant amount of energy through long-term and short-term purchase agreements with utilities in California, the Northwest, and the Southwest.

Long-Term Purchases. The Department purchases hydroelectric energy generated by other utilities. The output of the 165 MW Pine Flat Powerplant, owned and operated by Kings River Conservation District, supplies the SWP about 400 million kWh of energy in median water years.

The Department contracts for the energy output of five hydroelectric plants owned and operated by MWD. The total capacity of those plants is 30 MW. To use this resource efficiently, the Department included it in the exchange arrangements with SCE.

Beginning in late 1983, the Department purchased wind-generated energy from TERA Power Corporation. The energy was delivered from the Bethany Wind Park to the South Bay Pumping Plant near Tracy. Originally TERA installed 168 wind machines, with a total capacity of 9.45 MW. However, because of mechanical failures and subsequent litigation involving the developer, investors, and manufacturers, many machines have been out of service since 1987. In early 1996, the Department terminated the contract due to a contract breach by TERA Power Corporation. The Department proposes to dismantle and remove the wind park facilities.

The Department signed an agreement with Pacific Corp of Portland, Oregon, to purchase 100 MW of firm capacity and associated energy. That agreement became effective June 1, 1991, and will continue through 2004.

Short-Term Purchases. Additionally, according to terms of the 1988 Coordination Agreement between the Department and MWD, the Depart-

ment may purchase surplus energy from MWD's Colorado River Aqueduct system. The Coordination Agreement provides for coordinated operation between the SWP and MWD's Colorado River Aqueduct system. It also provides for:

- monthly surplus firm energy sales to MWD;
- economy energy sales to MWD;
- surplus energy purchases from the Colorado River Aqueduct system; and
- energy exchanges between the Department and MWD.

The Department also has the Western System Power Pool agreement with member utilities to purchase interruptible economy energy to satisfy unexpected, short-term energy shortages and to sell surplus short-term energy.

Contractual Transmission Arrangements

Although able to acquire transmission independently, the Department depends on other sources for transmission services. PG&E and SCE are the Department's primary providers of transmission service between SWP power resources and pumping loads and interconnected utilities for purchases, sales, and exchanges of power.

Under the Comprehensive Agreement with PG&E, the Department receives 1,355 MW of firm transmission service over the PG&E transmission system between SWP pump loads and power resources in Northern and Central California. The agreement allows the Department to request and receive additional firm and interruptible transmission service if needed.

To interconnect the SWP loads and resources in Southern California, the Department receives transmission service from SCE over the SCE transmission system under the SCE-DWR Power Contract and Firm Transmission Service Agreement.

In August 1967, the Department contracted for 300 MW of transmission capacity on the Extra High Voltage Pacific Northwest Intertie from the California-Oregon border to the Table Mountain, Tesla, Los Banos, and Midway substations. The Department retains its entire 300 MW share of

EHV capacity for access to the Pacific Northwest until 2005; 100 MW of this capacity is committed to receiving the long-term purchase of 100 MW from PacifiCorp.

In December 1984, the Department signed a Memorandum of Understanding with many public and private California utilities. As implemented in the Interim Participation Agreement and the Long-Term Participation Agreement, the Department has an option (which can be exercised during a 5-year period beginning in January 2005) to purchase 97 MW of transmission capacity on the third 500 kV transmission line that connects California with the Pacific Northwest. The transmission line began operation March 17, 1993.

Other SWP transmission needs are met by contractual arrangements with California utilities.

Load Management

The SWP controls the timing of its pumping load through an extensive computerized network. That control system allows the Department to minimize the cost of power it purchases by maximizing pumping during off-peak periods when power costs are lower—usually at night—and by selling power to other utilities during on-peak periods when power values are high. By taking advantage of this flexibility in scheduling SWP pumping load and generation, the Department reduces the net cost of power needed for SWP water deliveries.

Sales of Excess Power. When generation from SWP power resources exceeds requirements, the Department sells the excess power on the market. Currently, the Department contracts with utilities and marketers for short-term purchase, sale, or exchange of power. In addition to selling firm power, the Department may sell power on a day-to-day or hour-to-hour basis according to the terms of its interchange agreements and of the Western System Power Pool Agreement. These agreements provide the basis for making economical energy transactions, short-term capacity and energy sales or exchanges, unit commitments, and transmission service purchases. Through these contracts, the Department sells excess capacity and energy at market rates. Starting in July 1998, the Department

also bought and sold through the CalPX market excess energy not sold through bilateral agreements.

SWP Power Operation in 1998

Tables 10-1 through 10-4 present statistical information about SWP power operation for calendar year 1998, including energy consumed and generated, energy exchanged and purchased, and energy sold.

Energy Consumed

In 1998, energy used at the 25 SWP pumping and generating plants totaled 3.45 billion kWh.

Table 10-1 shows the amount of energy used each month at SWP pumping and generating plants to operate the SWP in 1998.

According to terms and conditions of various water conveyance contracts and exchange agreements, some water belonging to the Central Valley Project is pumped through the SWP Banks Pumping Plant and through the CVP and SWP joint-use facilities at Dos Amigos Pumping Plant and Gianelli Pumping-Generating Plant. USBR furnishes the energy for pumping this water.

Energy Generated

Table 10-2 shows amounts of energy generated at SWP facilities in 1998, as well as energy purchased for SWP operations.

Hydroelectric and Coal. The Hyatt-Thermalito power complex in Oroville produces a large amount of SWP energy. In 1998, Hyatt-Thermalito generated 3.87 billion kWh of energy.

Energy generated at SWP recovery plants—Alamo, Devil Canyon, Gianelli, Mojave Siphon, and Warne—totaled 664 million kWh in 1998.

In 1998, the SWP share of energy generated at the coal-fired Reid Gardner Unit 4 totaled 1.38 billion kWh of energy.

Contractual Resource Arrangements

SWP power operations rely on contractual arrangements as well as SWP facilities. Those contractual arrangements include joint development projects, energy exchanges, purchases, and transmission.

Joint Development. Through the West Branch Cooperative Development Agreement with LADWP, the Department receives energy based on the amount of water scheduled through the West Branch. In 1998, LADWP provided 176 million kWh of energy for the Department's share of energy generated at Castaic Powerplant.

In 1998, the Department's share of Gianelli Pumping-Generating Plant used 152 million kWh and generated 75 million kWh of energy.

Energy Exchanges. The Department has two agreements with SCE to purchase and/or exchange power. According to terms of the 1979 Power Contract (in effect since April 1983), part of the output of the Hyatt-Thermalito complex and all output of Alamo and Devil Canyon powerplants are delivered to SCE. According to the terms of the Capacity Exchange Agreement (in effect since April 1987), the Department delivers energy to SCE each year during on-peak periods and, in return, receives a greater amount of off-peak energy as well as transmission considerations. Those two exchange agreements resulted in a net of about 2.03 billion kWh of energy to the SWP in 1998.

Purchases and Costs. In 1998, the Department purchased 2.29 billion kWh of energy at a cost of \$39.72 million. Associated costs for capacity totaled \$24.07 million. Other SWP power costs, includes operation, maintenance, and those for debt service at Pine Flat Powerplant and costs at Reid Gardner Unit 4, totaled \$48.76 million. Table 10-3 shows amounts of power, transmission, and other services purchased in 1998 and costs of purchases, by area. Table 10-3 also reflects the restructuring of the electric industry through transactions with CalPX and the ISO and through new charges such as grid management and scheduling coordinators.

Long-Term Purchases. According to terms of the Kings River Conservation District contract,

the Department receives the total output of the 165 MW Pine Flat Powerplant. In 1998, the powerplant provided more than 767 million kWh of energy to the SWP at a total cost of \$14.94 million.

The Department also has a contract with Pacific Corp, from which the Department purchased 612 million kWh of energy in 1998 at a cost of \$34.28 million.

Under the MWD Small Hydro Contract, the Department received 116 million kWh of energy in 1998 from five small hydroelectric powerplants on the MWD system at a cost of \$4.42 million.

Short-Term Purchases. Existing resources and long-term power and transmission contracts ensure that the SWP has enough power to meet long-term needs. Periodically, when SWP power requirements exceed resources during daily operations, short-term purchases meet the difference. In 1998, the SWP purchased short-term energy from 10 utilities and marketers. The short-term energy purchases totaled 809 million kWh (Table 10-2).

Sales of Excess Power

In 1998, the Department sold 6.78 billion kWh of energy to 36 utilities and 19 power marketers for total revenues of \$139.35 million. The Department also received \$16.44 million in revenues for capacity, exchanges, and transmission arrangements. See Table 10-4 for information about energy and other services sold and revenue received, including those sold to CalPX and the ISO.

Forecasting Power Operations

Each year, after reviewing the water contractors' water delivery requests and the construction schedule for future facilities, the Department forecasts SWP power requirements through 2035, paying particular attention to forecasts through 2004, the year major power contracts expire.

Actual SWP power requirements may vary significantly from the amounts forecast. Those variations are due to the amount of water available and delivered in a given year. For example, dry conditions in

Northern California could result in a reduction of the amount of water available for delivery. If full deliveries cannot be made, less power will be used than was originally forecast. Power requirements could also decrease during a wet year because of the availability of water in the San Joaquin Valley or Southern California.

Conversely, power requirements could exceed the amount originally forecasted if actual water deliveries are greater than the amounts estimated. For example, if additional pumping is needed to refill reservoirs south of the Delta after an unexpected dry year, more power will be used than was initially forecast.

Criteria

The Department bases its forecast of electric power primarily on SWP pumping power requirements to

deliver water for SWP contractors' short-term and long-term water delivery requests. Requirements are based on the amount of energy necessary to deliver entitlement water requested by water contractors, including losses in reservoirs and aqueducts; recreation water; and water to replace storage in reservoirs south of the Delta.

Short-term power requirements, based on the actual water supply and reservoir storage levels, are determined for the current and two ensuing years of operation. Long-term operational studies for the remaining years are based on median-year water-supply conditions and optimal reservoir storage levels.

Information for this chapter was provided by the State Water Project Analysis Office.

Chapter 11

Facilities Maintenance

Construction at Oroville Dam

Significant Events

- On January 28, 1998, a Division of Safety of Dams climbing team inspected and evaluated the radial gate at Pyramid Dam. Inspections and evaluations are being conducted as a result of the July 17, 1995, failure of Gate 3 at Folsom Dam.
- In October 1998, a Division of Safety of Dams climbing team inspected and evaluated 4 of 17 radial gates at Thermalito Diversion Dam.

The Department of Water Resources, through the Division of Operations and Maintenance, monitors all State Water Project facilities to ensure safety and reliability. O&M staff collects and evaluates data about the performance of each facility. Staff also conducts annual, biannual, and quinquennial inspections and makes reports on facilities to document any deficiencies. These inspections allow facilities to be maintained at the highest level possible with available staff and resources. Finally, the Department is required, under federal and State law, to contract periodically with independent consultants to review the safety of SWP dams and power facilities.

The Department conducts several types of inspections of SWP facilities. O&M staff collects and evaluates data about the performance of each facility. Engineers from the Division of Safety of Dams review instrumentation data and inspect jurisdictional SWP dams annually to ensure that each dam is satisfactory for continued safe operation. The engineers evaluate proposed modifications to existing dams as well as the design and construction of new jurisdictional dams.

The Department is required to contract periodically with independent consultants to review the safety of SWP dams and power facilities, except those in the San Luis Field Division and the Pearblossom Spill Basin. The four dams in the San Luis Field Division (San Luis, O'Neill Forebay, Los Banos Detention, and Little Panoche) are joint use with the U.S. Bureau of Reclamation. They are not currently under the jurisdiction of the Division of Safety of Dams. Pearblossom Spill Basin Dam was originally designed to be used during misoperation at the Pearblossom Pumping Plant. The spill basin was never fully completed and has never been used.

The Federal Energy Regulatory Commission inspects all licensed SWP facilities annually. These inspections include a review of significant events, instrumentation data, and the visual appearance of each dam, penstock, powerplant, etc.

Inspecting and Maintaining Project Dams

During 1998, Department personnel inspected and performed routine and scheduled maintenance on SWP dams. DSOD inspects SWP dams annually with O&M personnel to ensure that each dam is satisfactory for continued safe operation. Engineers from DSOD evaluate proposed modifications to existing dams. FERC engineers inspect FERC-licensed SWP facilities annually. Some inspections were conducted under FERC and California Water Code requirements to evaluate SWP dam facilities every 5 years. Other activities were performed by O&M as routine inspections.

Routine Inspections

Routine inspections were conducted by O&M and DSOD staff at Frenchman, Antelope, and Grizzly Valley dams in the Upper Feather River Area; at Oroville, Bidwell Bar, Lime Saddle, Thermalito Diversion, Thermalito Forebay, Thermalito Afterbay, and Feather River Hatchery dams in the Oroville Area; at Clifton Court, Bethany, Patterson, and Del Valle dams in the Delta Field Division; at Sisk, O'Neill, Los Banos Detention, and Little Panoche detention dams in the San Luis Field Division (O&M and USBR); and at Cedar Springs and Pyramid dams, Devil Canyon Powerplant Second Afterbay, Warne Powerplant (O&M and FERC), and Castaic and Peris dams in the Southern Field Division.

Independent Reviews

California Water Code Reviews. To comply with the California Water Code and the California Code of Regulations, the Department is required to retain a consulting board to review:

- the adequacy of the design of any dam or reservoir the Department proposes to construct; and
- the safety of the completed construction, including the terms and conditions for the Certificate of Approval.

These provisions require the Department to retain a board of three consultants at least once every 5 years to review the operational performance of Department-owned dams. The board of consultants independently reviews and assesses safety conditions of SWP dams. These inspections include a review of significant events, instrumentation data, and the visual appearance of each dam, penstock, powerplant, etc. Consultants are selected based on their geotechnical, structural, and civil engineering knowledge and background as well as their expertise in evaluating the performance of dams.

In preparing their reports, consultants inspect facilities and review surveillance data and other information prepared by departmental staff. The Department then prepares action plans based on the consultants' recommendations.

In November 1998, the Director's Safety Review Board met and evaluated Cedar Springs Dam, Perris Dam, and Devil Canyon Powerplant Second Afterbay.

Three boards of consultants were convened to review the plans for the construction of Crafton Hills Dam on the East Branch of the SWP.

FERC Reviews. To comply with FERC regulations, consultants review FERC-licensed dams and power generation facilities owned by the Department. Consultants inspect facilities and review surveillance data and other information prepared by Department staff. The Department then prepares action plans based on the consultants' recommendations. These reviews, which may be conducted by one or more consultants, are scheduled every 5 years. In September 1998, the third 5-year FERC safety

consulting board inspection for the Warne Powerplant was conducted.

Maintaining Other Project Facilities

The Department continually monitors all SWP facilities and performs repairs and modifications as necessary to ensure safe, reliable water delivery. Headquarters' staff conduct biannual inspections of project facilities and complete inspection reports for each field division. The Oroville and San Joaquin field divisions are inspected in the spring and summer of even-numbered years and the Delta, San Luis, and Southern field divisions are inspected in odd-numbered years. Each report lists action items to ensure that follow-up inspections and reports are made.

Arroyo Pasajero Program

The Arroyo Pasajero and its tributaries drain approximately 530 square miles of the Coast Mountains west of the California Aqueduct in Fresno County. The Arroyo Pasajero's downstream juncture with the California Aqueduct, also known as the San Luis Canal between San Luis Reservoir and Kettleman City, poses a particularly difficult operational and maintenance problem for the SWP. During periods of heavy rainfall, high flows in the Arroyo Pasajero and its tributaries transport heavy sediment loads eroded from the mountains. Over many eons, sediment transported by Arroyo floods formed a 450-square-mile alluvial fan extending from its apex at the eastern margin of Pleasant Valley (Anticline Ridge) to the San Joaquin Valley trough. The California Aqueduct traverses the Arroyo's alluvial fan and forms a barrier to Arroyo flood flows. Flood control facilities include a retention basin designed to store storm runoff and sediment upstream of the Aqueduct, a siphon to release floodwaters east of the Aqueduct, and drain inlets to release floodwaters into the Aqueduct. The volumes of runoff and sediment deposition are much greater than estimated during the original design of the retention basin in the mid-1960s.

USBR designed and constructed the San Luis Canal segment of the California Aqueduct. USBR and the Department share costs of operating and maintaining the facility. Since the floods of 1969, USBR and the Department have worked to minimize the effects of

heavy flooding. In 1980, asbestos was discovered in the Metropolitan Water District of Southern California's water supply and traced to runoff from the Arroyo Pasajero and other Diablo range streams. This discovery, in conjunction with the high cost of removing sediment from the Aqueduct, led the Department to adjust operating procedures to minimize runoff entering the Aqueduct.

Long-Term Programs. In 1990, the Department sought the assistance of the U.S. Army Corps of Engineers to identify viable long-term solutions to the Arroyo Pasajero flooding and sediment problems. In 1992, the Corps issued the *Arroyo Pasajero Reconnaissance Report*, which demonstrated a federal interest in flood control at Arroyo Pasajero. The feasibility study—started in 1994 as a joint effort between the Department and USBR—provides a more rigorous analysis of the flooding and sedimentation problems and evaluates potential solutions in greater detail. The study is currently scheduled to run through late 1999, with a projected cost of \$7.86 million. The Department, as local sponsor, is committed to 50 percent of the total study cost, with one-half of this commitment met by providing in-kind services for the study. Under the Department's agreement with USBR for the Joint-Use Facilities of the San Luis Unit, USBR is paying 45 percent of the Department's study cost.

In April 1998, the Alternatives Formulation Briefing milestone was held at the Corps' South Pacific Division Office in San Francisco. The goal of this milestone briefing was to obtain Corps Headquarters' approval of the study findings and the plan formulation of the project alternatives prior to completing the draft feasibility report. The AFB was a success, with Headquarters' Planning and Policy Review branches providing some guidance on how to proceed with the draft feasibility report and forego the Feasibility Review Conference. Following the AFB Conference, the Corps and local sponsor revised aspects of the feasibility investigation pursuant to Corps Headquarters' guidance and completed an administrative draft in December 1998 for review by internal Corps offices, the Department, USBR, and their respective water contractors. Although the estimated costs and benefits are still being reviewed, the public draft, to be released in early 1999, is expected to identify two project alternatives with a federal interest:

- the enlarged Westside Detention Basin as the Corps' national economic development plan, at an estimated cost of \$238 million and benefit to cost ratio of 1.7:1; and
- the Pasajero Gap Detention Dam as a possible locally preferred plan, at an estimated cost of \$225 million and a benefit-to-cost ratio of 1.2:1.

The Department, with the support of the State Water Contractors, has begun providing funding and staff support to a Coordinated Resource Management Plan group called the Stewards of the Arroyo Pasajero Watershed. The mission of the CRMP is "to improve the Arroyo Pasajero watershed through erosion and sediment control by implementing improved land management practices that will sustain and promote the aesthetics, environmental quality, and economic viability of the watershed." It is believed this program will increase watershed infiltration as well as decrease erosion, complementing any structural flood control improvements, and thereby reduce the threat the Arroyo Pasajero poses to the California Aqueduct and surrounding communities.

Cantua Creek Stream Group. The Department continued a reconnaissance-level study of flood control measures for Martinez, Domengine, Salt, and Cantua creeks; Arroyo Hondo; Arroyo Ciervo; and Tumey Gulch. The alternatives under evaluation include upstream dams, expanded west-side ponding basins, east-side ponding basins, channel improvements, and conveyance of floodwaters east of the Aqueduct to Fresno Slough. Efforts on the Arroyo Pasajero feasibility investigation delayed completion of the CCSG reconnaissance report. Completion of the administrative draft report is anticipated in fall 1999.

Based on the preliminary hydrologic and sediment transport findings of the reconnaissance study, the Department undertook the design of interim measures to reduce flood water and sediment inflows to the San Luis Canal from the Cantua and Salt creek drain inlets. By maximizing the effectiveness of existing flood easements and placement of decanting weirs upstream of the existing drain inlets, the impounding capacity of the existing ponding basins prior to any releases into the Aqueduct can be enlarged approximately 10 times, providing up to a 10-year flood impoundment. These measures will

prevent significant volumes of sediment from being transported into the Aqueduct during the more frequent floods. Construction is expected during summer 1999.

Repairs and Modifications. Table 11-1 presents information, arranged chronologically, about significant scheduled and unscheduled outages at SWP pumping and powerplants in 1998. The table includes information about incidents resulting in outages exceeding 14 days.

**Table 11-1
Outages for Maintenance and Repair of Facilities in 1998, by Month**

<i>Month</i>	<i>Facility</i>	<i>Description</i>
January	Banks Pumping Plant	Unit 7 out of service from January 3 to February 2 for discharge valve repair.
	Devil Canyon Powerplant	Unit 1 out of service from January 5 to February 6 for annual maintenance.
	Gianelli Pumping-Generating Plant	Unit 7 out of service from January 12 to May 1 for biennial maintenance.
	Gianelli Pumping-Generating Plant	Unit 8 out of service from January 12 to April 2 for biennial maintenance.
	South Bay Pumping Plant	Unit 4 out of service from January 14 to February 9 for wiring modifications and preventive maintenance.
	Teerink Pumping Plant	Unit 3 out of service from January 16 to November 12 for annual maintenance.
	Chrisman Pumping Plant	Unit 1 out of service from January 20 extending into 1999 for motor rewind and stay vane replacement.
	South Bay Pumping Plant	Unit 3 out of service from January 26 to March 10 for motor replacement.
	Badger Hill Pumping Plant	Unit 6 out of service from January 26 to February 26 for pump impeller repair.
	February	Banks Pumping Plant
Mojave Siphon Powerplant		Unit 2 out of service from February 2 to April 13 for brake refurbishment.
Thermalito Powerplant		Unit 3 out of service from February 2 to March 12 for annual maintenance.
Pearblossom Pumping Plant		Units 1 and 2 out of service from February 3 to March 4 for transformer KYA repair.
South Bay Pumping Plant		Unit 9 out of service from February 7 to May 12 for discharge valve repair.
South Bay Pumping Plant		Unit 4 out of service from February 9 for motor replacement and pump repair. Completion expected by March 1, 1999.
Warne Powerplant		Unit 1 out of service from February 10 to June 26 for work to prevent silt intrusion.
Warne Powerplant		Unit 2 out of service from February 10 to June 23 for work to prevent silt intrusion.
Pearblossom Pumping Plant		Units 7 and 9 out of service from February 11 to March 2 for work in Pool 58.
Pearblossom Pumping Plant		Unit 5 out of service from February 16 to March 2 for work in Pool 58.
March	Pearblossom Pumping Plant	Unit 4 out of service from February 17 to March 2 for work in Pool 58.
	Devil's Den Pumping Plant	Unit 6 out of service from February 26 to March 18 for discharge valve repair.
	Edmonston Pumping Plant	Unit 5 out of service from March 2 to May 5 for unit breaker replacement.
	Pearblossom Pumping Plant	Units 4 and 5 out of service from March 4 to March 23 for transformer KYB testing.
	Pearblossom Pumping Plant	Units 7 and 9 out of service from March 5 to March 20 for repairs on Unit 9's discharge valve and Line No. 3.
	Las Perillas Pumping Plant	Unit 4 out of service from March 10 to April 10 for annual maintenance.
	Badger Hill Pumping Plant	Unit 6 out of service from March 12 to April 3 for impeller repair.
	Thermalito Powerplant	Unit 2 out of service from March 16 to April 23 for annual maintenance.
	South Bay Pumping Plant	Unit 7 out of service from March 25 to June 2 for motor replacement.
	Badger Hill Pumping Plant	Unit 1 out of service from March 27 to April 10 for installation of motor surge protection equipment.

**Table 11-1
Outages for Maintenance and Repair of Facilities in 1998, by Month**

<i>Month</i>	<i>Facility</i>	<i>Description</i>
April	South Bay Pumping Plant	Unit 2 out of service from April 1 to April 30 for wiring modifications.
	Reid Gardner Powerplant (NV)	Unit 4 out of service from April 4 to May 1 for annual maintenance.
	Las Perillas Pumping Plant	Unit 5 out of service from April 10 to May 5 for annual maintenance.
	Thermalito Powerplant	Unit 4 out of service from April 27 to July 23 for annual maintenance.
May	Barker Slough Pumping Plant	Unit 5 out of service from April 28 to May 14 for deferred maintenance response.
	Banks Pumping Plant	Unit 1 out of service from May 1 to June 12 for annual maintenance.
	Gianelli Pumping-Generating Plant	Unit 5 out of service from May 8 for stator rewind and unit breaker replacement. Completion expected by August 25, 1999.
	Pearblossom Pumping Plant	Unit 4 out of service from May 14 to June 2 for annual maintenance.
June	Mojave Siphon Powerplant	Unit 1 out of service from May 18 to June 16 for cooling water system repairs.
	Banks Pumping Plant	Unit 6 out of service from May 25 to June 23 for intermediate guide bearing replacement.
	Gianelli Pumping-Generating Plant	Unit 1 out of service from June 1 to June 18 for high speed rotor amortisseur winding repair.
July	Thermalito Diversion Dam Powerplant	Unit 1 out of service from June 2 to July 3 for annual maintenance.
	South Bay Pumping Plant	Unit 6 out of service from July 13 for pump replacement and motor repair. Completion expected by September 1, 1999.
August	Banks Pumping Plant	Unit 8 out of service from July 20 to October 1 for annual maintenance.
	Chrisman Pumping Plant	Unit 4 out of service from July 21 to August 6 for testing and cleaning up smoke damage.
	Chrisman Pumping Plant	Unit 9 out of service from July 21 to September 2 for discharge valve repairs.
	Chrisman Pumping Plant	Unit 5 out of service from July 24 to August 6 for transformer KYB repair.
	Dos Amigos Pumping Plant	Unit 5 out of service from July 28 for shaft and rotor rim repair. Completion expected by June 30, 1999.
	Mojave Siphon Powerplant	Unit 1 out of service from August 1 to August 14 for defective relay replacement.
	Mojave Siphon Powerplant	Unit 3 out of service from August 17 for work on Line No. 3. Completion expected by March 9, 1999.
September	Chrisman Pumping Plant	Unit 8 out of service from August 18 to September 2 for work on Unit 9.
	Devil's Den Pumping Plant	Units 1, 2, and 3 out of service from August 26 to September 30 for repair of transformer KYA.
	Chrisman Pumping Plant	Unit 9 out of service from September 2 for pump repairs. Completion expected by March 10, 1999.
	Barker Slough Pumping Plant	Unit 6 out of service from September 11 to September 25 for mechanical shaft seal replacement.
October	Chrisman Pumping Plant	Unit 4 out of service from September 14 to October 2 for impeller and stay vane repair.
	Gianelli Pumping-Generating Plant	Unit 6 out of service from September 7 to October 9 for installation of main unit breakers.
	Hyatt Powerplant	Unit 1 out of service from October 1 to November 5 for annual maintenance.
	Thermalito Powerplant	Unit 2 out of service from October 5 to December 8 for annual maintenance and exciter repair.
	Edmonston Pumping Plant	Unit 14 out of service from October 5 to October 30 for motor breaker retrofit.
	Pine Flat Powerplant	Unit 2 out of service from October 7 to November 20 for annual maintenance.
	Oso Pumping Plant	Unit 5 out of service from October 11 to November 24 for testing and contact adjustment.
November	Devil's Den Pumping Plant	Unit 4 out of service from October 11 to October 26 for discharge valve repair.
	Chrisman Pumping Plant	Unit 8 out of service from October 13 to October 28 for air release valve and controller replacement.

**Table 11-1
Outages for Maintenance and Repair of Facilities in 1998, by Month**

<i>Month</i>	<i>Facility</i>	<i>Description</i>
November	Oso Pumping Plant	Unit 7 out of service from October 13 for rotor pole replacement. Expected to extend into 1999.
	Pearblossom Pumping Plant	Unit 7 out of service from October 22 for pump casing and wear ring repair. Completion expected by July 14, 1999.
	Teerink Pumping Plant	Unit 1 out of service from October 26 for annual maintenance. Completion expected by August 30, 1999.
	Badger Hill Pumping Plant	Unit 1 out of service from October 28 for annual maintenance. Completion expected by February 5, 1999.
	Badger Hill Pumping Plant	Unit 6 out of service from October 26 to November 17 for annual maintenance.
	Dos Amigos Pumping Plant	Unit 4 out of service from November 2 to November 25 for biennial maintenance.
	Gianelli Pumping-Generating Plant	Units 3 and 4 out of service from November 2 to December 12 for installation of main unit breakers.
	Hyatt Powerplant	Unit 2 out of service from November 9 for annual maintenance. Completion expected by January 14, 1999.
	Devil Canyon Powerplant	Unit 3 out of service from November 9 to December 14 for annual maintenance.
	South Bay Pumping Plant	Unit 9 out of service from November 12 for pump repairs. Completion expected by July 17, 1999.
December	Dos Amigos Pumping Plant	Unit 3 out of service from November 12 to December 14 for vane control system inspection.
	Badger Hill Pumping Plant	Unit 2 out of service from November 19 for annual maintenance. Completion expected by February 9, 1999.
	Warne Powerplant	Unit 1 out of service from December 1 during Peace Valley Pipeline inspection. Completion expected by February 28, 1999.
	Warne Powerplant	Unit 2 out of service from December 1 for annual maintenance and during Peace Valley Pipeline inspection. Completion expected by February 28, 1999.
	Polonio Pass Pumping Plant	Unit 6 out of service from December 3 for discharge valve repair. Completion expected by May 30, 1999.
	Dos Amigos Pumping Plant	Unit 6 out of service from December 4 for biennial maintenance. Completion expected by January 8, 1999.
	Buena Vista Pumping Plant	Unit 5 out of service from December 4 for impeller replacement. Expected to extend into 1999.
	Thermalito Powerplant	Unit 3 out of service from December 14 for annual maintenance and exciter repair. Completion expected by February 4, 1999.
	Mojave Siphon Powerplant	Unit 2 out of service from December 15 for work on Line No. 2. Completion expected by May 3, 1999.
	Banks Pumping Plant	Unit 8 out of service from December 19 for discharge valve repair. Completion expected by January 22, 1999.
Dos Amigos Pumping Plant	Unit 3 out of service from December 24 for testing with vibration monitoring equipment. Completion expected by January 29, 1999.	
Chrisman Pumping Plant	Unit 2 out of service from December 28 for pump-case inspection and air-valve replacement. Completion expected by January 22, 1999.	

Information for this chapter was provided by the Division of Operations and Maintenance and the Division of Safety of Dams.

Chapter 12

Engineering and Right of Way

Scenic sunset on Aqueduct near
Edmonston Pumping Plant

Significant Events

- Between January 1, 1998, and December 31, 1998, the Division of Engineering worked on 56 design projects and another 50 construction contracts.
- A contract for emergency temporary repairs to the California Aqueduct at mileposts 54.95, 62.29, and 66.71 was awarded in August 1997 and completed in January 1998. A small seep in the embankment suddenly increased to a 1,000-gallon-per-minute leak at milepost 54.95 and required lowering the water level in the canal. During dewatering, a portion of the canal bank at milepost 62.29 slid into the canal and the wingwalls at milepost 66.71 check structure shifted. The work at these locations was performed while the canal was partially full to prevent additional drawdown failures.
- In February 1998, a second contract was let to make permanent repairs at milepost 54.95. A portion of the canal was dewatered using two large cofferdams to block the repair area. In March 1998, a slipout occurred upstream at milepost 52.5. The repairs for this area were added to this contract.
- Several repairs were made at Clifton Court Forebay. Work on this facility included repairing the trunnion anchorage and reinstalling one of the intake gates damaged in 1996 and removed from service.
- In winter 1998, high drainage flows eroded the soil from the Santa Clara Pipeline at milepost 29.79, exposing a portion of the pipe. This portion of the pipe was repaired by encasing the exposed section in concrete and restoring a blowoff that had been damaged.
- All major construction activities on the Coastal Branch Phase II were completed, with the exception of a few equipment contracts.
- Several additional emergency repairs were made to the canal lining during winter 1998. These repairs occurred at various locations, including the intake channel to Edmonston Pumping Plant Forebay and along the East Branch from milepost 327 to milepost 330.

Construction of the initial facilities of the State Water Project began in 1957 with the relocation of the Western Pacific Railroad yards and Highway 70 near Oroville. In 1963, work began on the California Aqueduct, and by 1968 the SWP was delivering water to long-term contractors in the San Joaquin Valley. The SWP was able to deliver water to Lake Perris, its southernmost point, with the 1973 completion of its facilities.

From the early 1970s to the late 1980s, design and construction activities centered on building power plants and adding pumping units and turbine-generators deferred from the initial construction of the SWP; enlarging or extending aqueduct reaches; and providing facilities to ensure water quality in the Delta. In the 1990s, design and construction activities focused on repairing and replacing components of existing facilities, constructing Phase II of the Coastal Branch to deliver water to San Luis Obispo and Santa Barbara counties, and extending the SWP to the San Geronio Pass Water Agency service area.

Division of Engineering Activities

From January 1998 through December 1998, the Division of Engineering worked on numerous design projects. Table 12-1 lists those projects along with expected or actual completion dates. In addition to designing those projects, staff conducted deficiency studies of dams, canal embankments, and other SWP facilities, including Oroville, Feather River Fish Barrier, Thermalito Afterbay, Del Valle, Cedar Springs, Castaic, and Pyramid dams; Peace Valley Pipeline; and Lower Quail Canal. The investigations helped the Department develop contracts to construct remedial seepage control filters at Lower Quail Canal embankment and perform a seepage repair to arrest and prevent subsurface erosion along Peace Valley Pipeline. The Department also tested potential grouts for use in future grouting of the instrumentation tubing in the core of Oroville Dam.

Fifty construction contracts were either in progress or completed from January 1998 through December 1998. These projects are listed in Table 12-2. The table also shows contract costs, dates contractors

received the notice to begin work, specification numbers, and the expected or actual contract acceptance dates. Resolution of contract claims may extend the actual contract closeout beyond the acceptance date. The acceptance date is the date the deputy director officially accepts the work and the completion date of the work precedes official acceptance of the contract. Table 12-2 shows actual costs of completed work or estimated costs of construction in progress.

Tables 12-1 and 12-2 are organized geographically according to construction divisions. Within each division, facilities where design or construction activities occurred are listed alphabetically. Activities at each facility are listed chronologically according to the date work began.

Oroville Division

Feather River Fish Hatchery. The contract, awarded in May 1998, is scheduled for completion in June 1999. Project features include constructing new rearing ponds, a hatchery building to include Americans with Disabilities Act modifications, a new ultraviolet disinfection building, demolition of selected existing facilities, and modifications to the Oroville Area Control Center.

Emergency Underwater Salvage. In January 1998, a 42-foot work boat from the Division of Operations and Maintenance abruptly sank at Lake Oroville where it was moored near the Hyatt Powerplant Intake Structure. Two emergency contracts were let, one to protect the lake water against pollution from leaking diesel fuel, and the other to raise and salvage the work boat to prevent more fuel from leaking. Work was successfully completed within a few days.

**Table 12-1
Design Activities, January 1998 through December 31, 1998, by Division**

<i>Construction Division and Facility</i>	<i>Construction Contract</i>	<i>Date Design Began</i>	<i>Design Estimated Completion Date</i>
Oroville Division			
Lake Oroville	Emergency underwater services	January 1998	January 1998
	Emergency boat salvage	January 1998	January 1998
	Lime Saddle campground	September 1998	August 1999
	Debris removal	May 1998	July 1998
Oroville Wildlife Area	Reinforced levee notch	December 1997	June 1998
Hyatt Powerplant	Ceiling replacement	June 1998	January 1999
	Renovate electrical controls for intake gate	July 1998	January 2000
	Turbine refurbishment	May 1997	February 1999
Thermalito Powerplant	15 kV switchgear	September 1997	August 1998
	Furnish automatic voltage regulator	June 1997	July 1998
Hyatt Powerplant and Thermalito Powerplant	Governor replacement	May 1997	October 1999
Delta Facilities			
South Delta	Sherman Island fish screens	July 1997	June 1998
Morrow Island	M-Line and C-Line levee raising and outfall renovations	February 1998	April 1998
Roaring River Slough	Levee and fish screen repair	May 1998	July 1998
North San Joaquin Division			
Clifton Court Forebay	Trashrack replacement	March 1998	January 2000
California Aqueduct	Canal seepage and concrete repair, mileposts 54.95, 62.29, and Clifton Court; pipeline repair, milepost 29, and landslide repair, mileposts 35.4 and 52.5	September 1997	February 1998
South Bay Aqueduct	Remove sediment and repair tank	September 1998	December 1998
South Bay Pumping Plant	Plant modifications	February 1998	September 1999
San Luis Division			
California Aqueduct	Flood easement restoration, milepost 135	November 1998	April 1999
Merced River, Ratzlaff Reach	Salmon habitat restoration	December 1998	February 1999
O'Neill Forebay	Madeiras area boating facilities (on hold)	September 1996	August 1999
South San Joaquin Division			
Badger Hill Pumping Plant	Pump refurbishment (on hold)	October 1998	August 1999
Edmonston Pumping Plant	Pump inlet and first stage modifications	February 1996	June 2002
Mojave Division			
California Aqueduct	Canal lining and road repair, mileposts 324.6, 330.32, 305, pools 43, 47, and 65	May 1998	October 1998

**Table 12-1
Design Activities, January 1998 through December 31, 1998, by Division**

<i>Construction Division and Facility</i>	<i>Construction Contract</i>	<i>Date Design Began</i>	<i>Design Estimated Completion Date</i>
	Emergency canal liner and forebay liner repairs, mileposts 326 to 331	January 1998	January 1998
Castaic Dam	Outlet tower access bridge repair	April 1998	August 1998
Pearblossom and Oso Powerplants	Furnish spare coils and materials	February 1998	September 1998
Mojave Siphon Powerplant	Revegetation	October 1997	July 1998
Castaic Lake	Recreation facilities renovation, east ramp area	January 1999	March 2000
Field Division Headquarters	Building and site work	May 1998	April 1999
Santa Ana Division			
East Branch Extension	Crafton Hills Reservoir	May 1997	September 1999
	Greenspot, Crafton Hills, and Cherry Valley pump stations	May 1997	October 1999
	Furnish pumps, motors, and variable frequency drives for Greenspot, Crafton Hills, and Cherry Valley pump stations	July 1997	June 1999
	Furnish switchgears for Greenspot, Crafton Hills, and Cherry Valley pump stations	September 1997	April 1998
	Furnish transformers for Greenspot, Crafton Hills, and Cherry Valley pump stations	December 1997	October 1998
	Pipeline Reach 1	April 1997	October 1998
	Pipeline Reach 2	June 1997	October 1998
	Pipeline Reach 3	May 1997	December 1999
	Furnish ANSI butterfly valves	July 1997	August 1999
	Furnish AWWA butterfly valves	July 1997	July 1999
	Furnish ANSI ball valves	July 1997	July 1999
	Install fiber optic cable, Greenspot to Crafton Hills pump stations	June 1999	February 2000
	Valve vaults, Morton Canyon and Carter Streets	November 1998	February 2000
	Furnish and install control and communication system	January 1998	February 2000
	Furnish circuit breakers, Greenspot and Crafton Hills pump stations	December 1997	November 1998
	Devil Canyon Second Afterbay	Revegetation	October 1996
Devil Canyon Afterbay	Inland feeder connection	July 1997	June 1998
Santa Ana Pipeline	Modifications at milepost 433.06, Box Springs turnout	April 1998	August 1998
	Sugarloaf Mountain road repair and drainage repair	July 1998	June 1999

<i>Construction Division and Facility</i>	<i>Construction Contract (Specification Number)</i>	<i>Starting Date</i>	<i>Acceptance Date (Expected or Actual)</i>	<i>Contract Costs (Thousands of dollars)</i>
	Furnish acoustic velocity flowmeters—Devil's Den to Valve Vault facility (95-05)	June 1995	April 1998	393
	Seed and control erosion (96-16)	September 1996	October 1998	271
South San Joaquin Division				
Chrisman Pumping Plant	Furnish stator coils (92-11)	July 1992	January 1998	595
Teerink Pumping Plant	Furnish spare coils and materials (97-02)	August 1997	May 1999	374
Tehachapi Division				
Edmonston Pumping Plant	Furnish pump spare parts, Units 1, 3, 5, 7, 9-14 (96-25)	January 1997	June 1998	2,091
	Furnish 15.8 kV circuit breakers (97-01)	April 1997	March 2000	10,436
	Install remote terminal units (97-09)	August 1997	October 1998	263
West Branch				
Angeles Tunnel	Furnish intake gate stems, Angeles Tunnel intake works (97-07)	October 1997	March 1999	870
Gorman Creek Bypass Channel	Restore channel (97-13)	September 1997	June 1999	7,500
Oso Pumping Plant	20-ton trolley for bridge crane (96-24)	June 1997	August 1998	218
Mojave Division				
Mojave Siphon Powerplant	Furnish and install turbines, generators, and governors (89-13)	August 1989	September 1999	14,723
	Furnish and install butterfly valves—Mojave Siphon and Devil Canyon powerplants (91-15)	August 1991	July 1999	6,314
	Furnish and install acoustic velocity flow meters (93-18)	October 1993	May 2000	437
	Construct valve vaults (97-25)	April 1998	July 1999	3,116
Pearblossom Pumping Plant Enlargement, Phase II	Furnish and install vertical centrifugal pumps (87-04)	May 1987	December 1999	2,780
Aqueduct	Canal lining and road repair, milepost 305.10 to milepost 305.44, milepost 323.25 to milepost 330.32, and milepost 365.73 to milepost 395.71 (98-25)	December 1998	September 1999	4,655
	Emergency canal lining and forebay liner repair, milepost 326.77 to milepost 330.82 and Edmonston Pumping Plant (98-01)	January 1998	June 1998	7,947
Santa Ana Division				
East Branch Enlargement	Furnish and install turbines, governors, and valves (87-15)	July 1987	Units rejected	10,265

Table 12-2
Construction Activities, January 1998 through December 1998, by Division

<i>Construction Division and Facility</i>	<i>Construction Contract (Specification Number)</i>	<i>Starting Date</i>	<i>Acceptance Date (Expected or Actual)</i>	<i>Contract Costs (Thousands of dollars)</i>
Devil Canyon Powerplant	Site work (96-20)	September 1997	April 1999	3,338
San Bernardino Tunnel	Reconstruct intake (95-07)	July 1995	Pending	25,531
Santa Ana Pipeline	Modifications at milepost 433.06, Santa Ana Pipeline (98-20)	October 1998	June 1999	1,400
Multiple Divisions	Furnish steel pipe sections, Delta and Southern field divisions (96-26)	January 1997	June 1998	650
	Remove and replace storage tanks: Oroville, Delta, and San Luis field divisions (97-11)	August 1997	June 1999	572
	Furnish 230 kV SF6 power circuit breakers and SF6 gas processing carts: Banks and Pearblossom pumping plants (97-26)	March 1998	July 1999	855
	Emergency repairs to canal lining and forebay liner: milepost 326.77 to 330.82 and Edmonston Pumping Plant Forebay (98-01)	January 1998	June 1998	7,947
	Repair canal seepage, roads, and concrete, and erect monument signs (98-04)	April 1998	February 1999	2,196
	Recoating outdoor gantry cranes and access bridge: Dos Amigos, Buena Vista, Teerink, Chrisman, Edmonston, Oso, and Pearblossom pumping plants and Lake Perris (98-08)	July 1998	January 1999	208
	Seal coat and slurry seal paved areas, Butte to Los Angeles counties (98-10)	August 1998	June 1999	945

Debris Removal. A contract for removal and disposal of debris, including driftwood and logs, from McCabe Creek near Lake Oroville was awarded in August 1998 and completed in December 1998.

Automatic Voltage Regulators. A contract to furnish automatic voltage regulators for Units No. 1 through 4 at Thermalito Pumping-Generating Plant was awarded in September 1998 with a completion date in December 1999. Commissioning of the units is expected to be completed by April 2000.

Delta Facilities

Rock Barriers. The 2-year (1996 and 1997) contract for construction of seasonal temporary rock barriers in designated South Delta waterways (Middle River, Old River, and Grant Line Canal) was completed in

December 1997. A new multi-year (1998, 1999, and 2000) contract was awarded in January 1998, with completion scheduled for December 2000.

As with previous contracts, the contractor will be directed to construct and later remove the temporary rock barriers at specified locations within the Delta waterways. Barriers are generally constructed at Old River (two sites), Middle River, and Grant Line Canal, with barrier installation and removal occurring in the spring and fall. The work includes constructing the barrier from rock and appurtenant equipment salvaged from the previous year and stockpiled adjacent to the site. Boat ramps to facilitate transfer of boats from one side of the barrier to the other were constructed in previous years at Old River and Grant Line sites.

Installation and removal of these temporary barriers is designed to enhance water levels and circulation in the south Delta for local agricultural diversion, assist fish migration, and facilitate the gathering of hydraulic data for the design of future permanent barriers.

Fish Screens. A contract to construct a set of fish screens for an agricultural diversion to Sherman Island at Horseshoe Bend on the Sacramento River was awarded in August 1997 and completed in September 1998. The work consisted of fabricating and installing a set of two fish screens, laying 200 feet of 24-inch-diameter intake pipeline, erecting a structural steel access platform on timber piling, and other appurtenances.

A second contract to construct additional fish screens at various locations on Sherman Island along the San Joaquin River was awarded in July 1998, with completion expected in March 2000. The work is similar to that described above. The engineer, however, will determine how many of the 12 possible sites will actually be built.

The screening of river agricultural diversions is required as part of the permit terms for the south Delta temporary rock barriers.

Suisun Marsh Facilities

Morrow Island Distribution System. A contract to repair and raise the levees of the M-Line and C-Line ditches of the Morrow Island Distribution System was awarded in July 1998 and completed in December 1998. Work consisted of repairing and raising the north and south levees using lime-treated embankment material, constructing levee roads, constructing a timber access platform, and installing slide gates at the M-Line ditch outfall pipes and at the C-Line outfall structure.

Roaring River Slough Distribution System. A contract for levee repair and fish screen repairs at Roaring River Slough was awarded in August 1998 and completed in September 1998. The work consisted of removing debris, placing compacted embankment material, placing aggregate base road surface, and filling scoured areas below existing fish screens with gabions, cellular concrete mattresses, and stone slope protection.

North San Joaquin Division

Banks Pumping Plant. A contract to fabricate four 10-foot by 12-foot steel bulkhead gates for Banks Pumping Plant intake was awarded in October 1997 and completed in November 1998.

Aqueduct Repairs. The following two emergency contracts and one urgent aqueduct repair contract were undertaken during this reporting period. Several new repair methods, techniques, and geomembrane materials were used.

Mileposts 54.95, 62.29, and 66.71. A contract for emergency temporary repairs to the California Aqueduct at mileposts 54.95, 62.29, and 66.71 was awarded in August 1997 and completed in January 1998.

At milepost 54.95, leakage increased to approximately 1,000 gallons per minute, causing great concern to O&M. The emergency repairs consisted of injecting grout to stabilize the embankment and laying a PVC liner on the canal concrete panels to stop the leakage and prevent further damage and displacement.

At milepost 62.29, a 140-foot section of the canal lining slipped into the Aqueduct. The broken concrete panels and debris were removed, and the cavity was backfilled with large-size gravel. Broken concrete panels were not replaced; this will be done at a later date. Pipe supports for an adjacent oil pipeline were repaired by the oil company.

At milepost 66.71, the wingwalls of check structure 12 were secured from further slippage with anchored tiebacks. The work at these locations was performed in the water because water deliveries could not be interrupted.

Aqueduct Repairs Mileposts 54.95 and 52.5. A second emergency canal repair contract was let in February 1998 to provide a permanent repair at milepost 54.95. Two large cofferdams, one upstream and the other downstream, were built to provide a dry 2,000-foot-long work area. Other items of work included excavating unstable canal embankment, constructing compacted embankment, extending the existing 60-inch corrugated metal pipe drain culvert

under the canal, constructing a reinforced concrete outlet structure for the culvert, removing damaged and displaced concrete panels, placing gravel and waterproof geomembrane materials on the canal slopes, and applying 2 inches of shotcrete.

Under the direction of staff from the departments of Water Resources and Fish and Game, a crew from the California Conservation Corps waded through shallow water in the 2,000-foot-long dewatered canal reach, netting large catfish and striped bass. These rescued fish were placed in a “fish hopper” and deposited in an adjoining portion of the canal.

In March 1998, a slipout occurred at milepost 52.5. Emergency repair work was initiated immediately under the milepost 54.95 contract. About 50,000 cubic yards of slide material were removed and a series of post-tensioned rock-bolt tiebacks were installed to stabilize the cut slope on the west side of the canal. In addition, the canal prism was reshaped and the canal sideslopes were covered with articulated concrete block mats to minimize erosion. The canal could not be emptied for operational reasons, so the repair work had to be performed in the water. All the repair work under this contract was completed July 1998.

Canal Seepage, Road, and Concrete Repairs.

Under an urgent contract, repair work began in April 1998 on four facilities described below. Work is scheduled to be completed in early 1999. The following operations are listed in Table 12-2 under Multiple Division Activities (Specification 98-04).

Clifton Court Forebay. Work on this facility included excavating eroded embankment areas, placing rock slope protection and concrete, repairing Intake Radial Gate No. 4 anchorage, and chip sealing operating roads.

Byron Road Bridge. Temporary repairs were made to the concrete deck of the Byron Road Bridge, which carries traffic over the Banks Pumping Plant intake channel. Traffic restrictions and truckload limits, as well as speed limit signs, were erected to protect the structure and prevent accidents. Permanent repairs of the bridge deck will be undertaken in the near future.

Operating Road Repairs. Numerous sections of the California Aqueduct primary operating roads were repaired from Orestimba Creek to the vicinity of O’Neill Forebay. The work consisted of filling pot-holes and applying asphaltic chip seals to 12 designated areas that varied in length from 100 feet to 4,000 feet.

Santa Clara Pipeline. Repair to a section of the Santa Clara Pipeline at milepost 29.79 was performed in August 1998. The pipe was uncovered and undermined by unusually high storm drainage in Mission Spring Creek due to El Niño in January 1998. Repair consisted of concrete encasement, restoring a blowoff, and reinforcing the streambed in the vicinity of the pipeline.

San Luis Division

Roof Replacement. Work on a contract to replace existing roof systems at the Romero Overlook Visitor Center, the Vehicle Repair Building at the San Joaquin O&M Center, and the Mobile Equipment Building at the Lost Hills O&M Subcenter was started in September 1997 and completed in January 1998.

The work consisted of selective demolition and asbestos abatement of existing roofing, insulation and flashing, removing and reinstalling equipment, constructing built-up roofing, installing sheet metal work and roof drains, applying sealants, and painting.

Emergency Protection. An emergency contract to provide protection for the California Aqueduct downstream of the Los Banos Detention Dam, and to prevent contamination of the water, was let in February 1998 and completed in June 1998.

The work consisted of constructing a notch in the right embankment of the aqueduct that would, if necessary, safely convey floodwater into the aqueduct and prevent it from flowing into the town of Los Banos in the San Joaquin Valley. The top of the notch was covered with filter fabric and articulated block mats. Rock slope protection was placed where required.

Monument Signs. Permanent monument signs were constructed at Sisk Dam and San Luis Reservoir, O'Neill Dam and Forebay, and Gianelli Pumping-Generating Plant. Work consisted of constructing a reinforced concrete sign structure at the Sisk and O'Neill dam sites and an unreinforced concrete pedestal with embedded steel support posts for an all-metal sign at the Gianelli plant. This work is listed in Table 12-2 under Specification 98-04, Multiple Division Activities.

Coastal Branch

Phase I Construction. Construction activities in this reach, which consists of approximately 13 miles of existing concrete-lined canal and Las Perillas and Badger Hills pumping plants, involved furnishing and replacing electrical switchgear and excitation systems at the existing pumping plants. The work started in November 1994 and is scheduled for completion in May 1999.

Phase II Construction. Construction of Coastal Branch Phase II added approximately 100 miles of pipeline to the existing Phase I facilities. The Department designed, managed, and supervised construction of 72 of the 100 miles; the remainder was designed and constructed by Central Coast Water Authority. All major facilities were sufficiently completed to start delivery of the treated water by mid-August 1997. All contract work, with the exception of the multiyear erosion control and seeding contract, was completed by the end of June 1998.

The following is a brief description of the facilities that were constructed under Phase II. A brief synopsis of potential and certified claims activities that resulted from the construction activities is also provided.

The Project. The Coastal Branch Phase II facilities consisted of approximately 100 miles of mostly buried pipeline. The steel pipeline, with inside diameters of 42 to 52 inches, was provided with a mortar interior lining and coal tar enamel exterior coating for corrosion protection and was extended from the new Phase II Devil's Den Pumping Plant in Kern County to Vandenberg Air Force Base in Santa Barbara County. Three pumping plants—Devil's Den, Blue-stone, and Polonio Pass—lift the water 1,500 feet

over the steep Tumbler Mountain Range to the summit of Polonio Pass into CCWA's water treatment plant. From the water treatment plant, the treated water flows through the buried pipeline to its terminus at Vandenberg AFB, where it connects to CCWA's 42-mile-long pipeline, which terminates at Lake Cachuma northwest of the city of Santa Barbara. The system is capable of delivering 47,816 acre-feet of water per year. The first water flowed through the system in April 1997 and was used for testing the completed pipeline, pumping plants, storage tanks, surge tanks, and other appurtenant facilities.

Major Construction Activities. All major construction activities on the Coastal Branch Phase II were completed in early 1998, with the exception of a few equipment contracts. Work on these equipment contracts involved replacement and warranty work, which is scheduled to be completed in early 1999.

Environmental Protection. Construction of the Coastal Branch was the most closely studied, monitored, and mitigated construction project in the history of the SWP.

Eighteen ecological communities found along the pipeline route included dozens of sensitive plant and animal species, ranging from the San Joaquin kit fox to the burrowing owl and the red-legged frog. Before construction began, miles of fence were built along the construction area to protect the blunt-nosed leopard lizard. Construction of the fence, as well as removal of live lizards from the construction area, was under the supervision of environmental specialists. All participating personnel were trained in environmental responsibilities.

Native American cultural and ancient burial sites were found in the construction area, which prompted pipeline route changes to avoid disturbing these areas. Archaeologists documented each site and, along with State, federal, and local agencies, and tribal groups, closely monitored construction activities.

All construction contractors were required to prepare, submit for review and approval, and implement detailed plans and programs to protect the environment. These included plans for biological resources

(plants and animals), cultural resources, air quality, water quality control, erosion/dust control, traffic/noise abatement, and fire prevention and control.

The contractors were required to provide an on-site Environmental Control Supervisor to monitor the contractors' activities and ensure compliance with environmental requirements.

Contract Administration. As in most construction projects, changes in the scope of the original work may include increases or decreases in quantities, changes in design and alignment, and unforeseen conditions. These changes normally cause an increase in the cost of the contract and are handled through issuance of Contract Change Orders, which become part of the contract.

Such changes in the work often lead to disagreements and disputes between the owner, in this case the Department, and the contractors and their subcontractors. If disagreements cannot be settled through discussion and negotiations, the contractors and their subcontractors may file a potential claim with the Department that may develop into a certified claim.

On this project, as of the end of this reporting period, all but one of the prime contractor's certified claims have been settled. Negotiations continue on the outstanding claim issue. While there has been significant progress in resolving and settling construction claim issues, four complicated and complex issues of the claim remain to be resolved.

South San Joaquin Division

Chrisman Pumping Plant. Stator coils manufacturing began under a contract awarded in July 1992. Work was completed January 1998.

Teerink Pumping Plant. A contract for furnishing spare motor coils and appurtenant materials was awarded in August 1997, with completion expected in May 1999. Manufacturing is underway.

Tehachapi Division

Edmonston Pumping Plant. Work on a contract to furnish pump spare parts for pumping units 1, 3, 5, 7, and 9 through 14 was started in January 1997 and completed in June 1998. Manufacture of 15.8 kV cir-

cuit breakers for Edmonston Pumping Plant continues and is approximately 90 percent complete. This work began April 1997 and is scheduled for completion March 2000.

A contract to furnish and install remote terminal units for Edmonston Pumping Plant was awarded in August 1997 and completed in October 1998.

An emergency contract to repair and replace concrete liner panels at Edmonston Pumping Plant forebay intake channel was awarded in January 1998, with a 60-day completion date. The work was completed in June 1998. This contract is listed in Table 12-2 under the Multiple Division Section (Specification 98-01). The work consisted of removing dislodged and broken liner panels, placing drain rock for the slope and in voids created by missing panels, placing articulated concrete block mats on top of the drain rock, and removing accumulated drain rock at the invert. Most of the work had to be performed under water since the channel could not be emptied because of water delivery commitments.

West Branch

Angeles Tunnel. A contract to manufacture and furnish intake gate stems sections and appurtenances for this facility was awarded in October 1997 with completion scheduled for March 1999.

Gorman Creek. A contract to construct a bypass around the Peace Valley Pipeline and Warne Powerplant and restore an existing channel at Gorman Creek was awarded in September 1997. The notice to begin work, however, was postponed until spring 1998 because of heavy rainstorms caused by El Niño. Work was scheduled to begin in June 1998, but was delayed to July because of high groundwater caused by the heavy winter rains. The work is scheduled to be completed in June 1999.

The work consists of clearing, reconstructing, and restoring an existing diversion structure, removing an existing diversion channel, restoring Hungry Valley and Side Hill Siphons, removing two existing slide gates, constructing approximately 7,000 linear feet of a new 5-inch thick shotcrete-lined channel, relocating roads and a road crossing, reconstructing drainage facilities, and relocating fences.

Peace Valley Pipeline Repairs. Longitudinal internal cracks at two locations were discovered during a December 1998 inspection of the 12-foot diameter pipeline. Excavation at Station 284+70 revealed the exterior mortar cover to be fractured and the prestressing wire to be badly corroded and broken in numerous places. The pipe segment was repaired by encasing it in reinforced concrete. Although excavation at Station 206+80 and subsequent testing revealed intact mortar cover and prestressing wire, the pipe segment was also encased in concrete to prevent similar problems in the future. Work began in late December 1998 and was scheduled for completion by February 1999. The work was added to Specification 97-13, Gorman Creek Bypass Channel Restoration.

In early December 1998, two sections of the Lower Quail Canal experienced drawdown failure while being dewatered for routine inspection purposes. The embankment failure was apparently caused by high pore pressures within the embankment. An emergency contract was awarded at the end of December to repair the canal. The repairs will consist of constructing cofferdams and dewatering two portions of the canal. Broken concrete panels and slide material will be removed and the canal section rebuilt. A drainage system will be installed behind the concrete lining to prevent a recurrence of this type of failure by providing a way to remove groundwater during any future drawdowns. The repairs will be completed by the end of February 1999.

Oso Pumping Plant. Work to furnish and install a 20-ton infrared radio remote-control-operated, electric-driven trolley on an existing overhead traveling 60-ton bridge crane was started in June 1997 and completed in August 1998. Final activities involved operational testing, CAL-OSHA crane certification, and a personnel training program.

Emergency Road Repairs. The access road leading to Pyramid Dam had to be repaired under emergency conditions in February 1998. High flows in Piru Creek caused by heavy winter rains eroded the creek bank adjacent to the road. Truckloads of large rocks were deposited in the eroded area to fill the cavity caused by the eroding water and to prevent further damage. This work was performed under the emergency contract issued for repair of Edmonston Fore-

bay and is listed in Table 12-2 under the Multiple Division Section. All work was completed by April 1998.

Mojave Division

Mojave Siphon Powerplant. All original contract work for the construction and installation of the three new generating units has been completed, except for final operational testing of the units and the repeatability test of the acoustic velocity flowmeters. These cannot be performed until May 2000 because of water delivery commitments and construction of the reinforced concrete vault structures to accommodate the new inlet valves.

Valves and Valve Vaults. Manufacturing work continues on the two new additional butterfly valves for the Mojave Siphon Powerplant. A contract to construct reinforced concrete vaults for these valves was awarded in April 1998, with completion expected in July 1999.

Pearblossom Pumping Plant. Remedial work continues on the three new pumps installed in 1986. This work consists of machining pump impellers and shafts and installing new mechanical pump seals. The work is being performed under warranty and the pump contract will not be accepted until this warranty work is satisfactorily completed. All work is scheduled to be completed in December 1999.

Aqueduct. Emergency canal lining repairs were performed at numerous locations along the East Branch of the California Aqueduct starting at milepost 327 and ending at milepost 330. Work started in January 1998 and was completed in April 1998.

The work consisted of removing broken and displaced canal concrete lining panels and debris, cleaning expansion joints, excavating trenches for waterproof geomembrane, anchoring concrete or shotcrete backfill, placing concrete slurry backfill in cavities where lining slabs had been displaced, placing waterproof geomembrane on top of existing concrete lining panels, applying shotcrete and new contraction joint sealant, and performing other work as directed.

A second contract to perform canal lining and road repairs at milepost 305.10 to milepost 305.44,

milepost 323.25 to milepost 330.32, and milepost 365.73 to milepost 395.71, was awarded in December 1998 and is scheduled to be completed in September 1999. The work is similar to that described for the contract above.

Santa Ana Division

Devil Canyon Powerplant. Negotiations continue with the turbine contractor regarding the rejection of the two units that do not meet all the specified operating criteria.

Site work. A contract to perform site improvements was awarded in September 1997 and is scheduled to be completed in April 1999.

San Bernardino Tunnel Intake. Work on the reconstruction of the intake started July 1995 and was completed in November 1997. Several items of work are being completed under warranty, and the contract will not be accepted until warranty work is satisfactorily completed.

Santa Ana Pipeline. A contract to repair and modify a section of the Santa Ana Pipeline was awarded in October 1998 and is scheduled to be completed in June 1999. The work consists of removing a section of damaged pre-stressed concrete pipe and replacing it with a Department-furnished steel pipe, constructing a reinforced concrete vault structure, and performing other modifications.

Multiple Divisions

The following is a brief description of construction activities that were included in contracts covering two or more construction divisions.

Steel Pipe Sections. The contract to manufacture steel pipe sections was awarded in January 1997 and completed in June 1998. The completed pipe sections were delivered to the Delta and Southern field divisions for storage. They are available for emergency repairs.

15.8kV Circuit Breakers. The manufacture of circuit breakers for Edmonston Pumping Plant, Gianelli Pumping-Generating Plant, and Devil Canyon Powerplant continues. Completion is scheduled for November 1999. Installation of the Gianelli breakers

will be added by change order and is scheduled for completion in March 2000.

Storage Tanks. A contract to remove and dispose of existing underground storage tanks at the Oroville, Delta, and San Luis field divisions and install two new above-ground fuel tanks at the Oroville O&M Center was awarded in August 1997. The work is scheduled for completion in June 1999.

The underground tanks ranged in capacity from 10,000-gallon gasoline and diesel storage and 1,800-gallon copper-sulfate storage tanks, to 200-gallon used oil tanks. Cavities created by the tank removal were backfilled and surfaced with concrete or asphalt paving.

A new fuel-dispensing station, with above-ground tanks, was constructed at the Oroville O&M Center. The work consisted of furnishing and installing a 10,000-gallon gasoline tank and a 10,000-gallon diesel fuel tank with associated fuel-dispensing equipment.

Power Circuit Breakers. A contract to furnish 230 kV SF6 power circuit breakers and SF6 gas processing carts for Banks and Pearblossom pumping plants was awarded in March 1998, with completion scheduled in July 1999.

Crane Recoating. A contract to recoat outdoor gantry cranes and access bridge at Dos Amigos, Buena Vista, Teerink, Chrisman, Edmonston, Oso, and Pearblossom pumping plants and Lake Perris was awarded in July 1998, with completion scheduled in January 1999.

Road and Paved Areas. A contract to apply asphaltic seal coat and slurry seal to roads and paved areas, Butte to Los Angeles counties, was awarded in August 1998 and is scheduled to be completed in June 1999.

Miscellaneous Activities

Goose Lake Flood Relief Structure. A contract to excavate and place cement-treated base roadway surfacing and concrete on existing riprap bank protection adjacent to the cement-treated base was awarded in November 1998, with completion expected in June

1999. The work site is located in Rancho Llano Seco in Butte County adjacent to the Sacramento River.

Right of Way Activities

The Department spent a net total of \$245.2 million to acquire rights of way and mitigation lands for the SWP from inception to December 31, 1998. From July 1 to December 31, 1998, the Department:

- finalized acquisition of easement rights over three parcels (9.61 acres) for a total price of \$93,106 for the Coastal Branch, Phase II Project;
- acquired easement rights over two parcels (1.79 acres) for a total price of \$15,234 for the East Branch Extension, Phase II Project;
- managed 88 leases for a total revenue of \$284,316;
- sold an easement over one parcel of land for \$10,200 as part of an easement exchange on Tejon Ranch;
- obtained 17 temporary entry permits for the Delta well decommissioning and East Branch Extension projects;
- issued 15 encroachment permits and collected fees of \$11,245 for review and inspection costs;
- completed five encroachment reviews where the applicant had prior property rights;
- coordinated review of 11 tentative tract map developments within 1 mile of the Aqueduct; and
- entered into seven utility relocation agreements.

Information for this chapter was provided by the Division of Engineering and the Division of Land and Right of Way.

Chapter 13

Recreation

Bikers at Oroville
recreation area

Significant Events

- California's first launching ramp designed especially for jet skis was dedicated in a ceremony on May 16, 1998, at Power Cove, Lake Perris, in Riverside County. Department of Boating and Waterways' Director Chuck Raysbrook spoke about the unique design and the start of National Safe Boating Week (May 16-22). The project includes a 4-lane concrete launching ramp, restrooms, a new parking lot with spaces for 55 cars and 63 car/trailers, area lighting, landscaping, and 30 picnic tables.
- The ribbon cutting and dedication of Arroyo Del Valle Trail by the East Bay Regional Park District Board of Directors took place on September 19, 1998. The new staging area and trail are key links in the regional trail that will eventually connect Lake Del Valle and EBRPD Shadow Cliffs Regional Park in Pleasanton. Initial funding for the 7-1/2 mile shoreline trail at Lake Del Valle was provided by a Land and Water Conservation fund grant from the Department to EBRPD.

The State Water Project is a multipurpose project that benefits millions of Californians. In addition to providing water supply, flood control, and habitat for fish and wildlife, the SWP offers extensive and varied recreational opportunities—tours, sightseeing, fishing, hunting, camping, boating, water skiing, bicycling, and swimming.¹

Recreation Areas

The SWP has 37 developed recreation areas or sites throughout California, including 18 fishing access sites. Figure 13-1 shows the names and locations of each area.

Recreation Days

In 1998, SWP facilities received 4.20 million recreation days of use, a slight decrease from the 4.53 million recreation days recorded in 1997 (Table 13-1). Recreational use at the 18 developed fishing access sites and along the California Aqueduct Bikeway was down nearly 25 percent from 1997. A recreation day is defined as one individual user visiting a recreation site along the SWP during a 1-day period.

Most SWP recreation and visitor use was concentrated at the major reservoirs, where well-developed facilities accommodate the public. Fifty-three percent of the total SWP recreational use in 1998 occurred at the four major reservoirs in Southern California: Pyramid Lake, Castaic Lake, Silverwood Lake, and Lake Perris.

¹ According to the Davis-Dolwig Act (Water Code Sections 11925 *et seq.*), the Department has overall responsibility to acquire property, plan recreation, and ensure that enhancement of fish and wildlife habitat is included as part of the State Water Project, although the costs of these recreation activities are not borne by the water supply contractors. In addition, Federal Energy Regulatory Commission License Numbers 2100 and 2426 require the Department to plan for recreational and associated activities at licensed SWP facilities.

Since the SWP began delivering water in 1962, more than 150 million recreation days have been recorded at SWP recreational facilities.

Facility Planning

During 1998, the following planning activities for recreation facilities occurred.

- The Department of Boating and Waterways completed conceptual plans for shoreline improvements at the Sawpit Canyon Area at Silverwood Lake.
- Working drawings are being prepared by the Department of Boating and Waterways for boat launching facility improvements at these locations:
 - Medeiros Area at San Luis Reservoir State Recreation Area;
 - Castaic Dam left abutment launch ramps; and
 - Pyramid Lake—Emigrant Landing Area.

New Facilities

Lake Oroville. The following new facilities were completed at Lake Oroville recreation areas.

- A fish-cleaning station and 4-unit restroom facility were added at the spillway area of Oroville Dam.
- A 4-unit restroom facility was added at the launch ramp in the North Forebay area.
- A boat-boarding dock was added at Wilbur Road boat ramp. Funding was provided by the Department of Boating and Waterways.

Lake Del Valle. The following new facilities were completed at Lake Del Valle recreation areas.

Grand Total	4,200,100

- A contractor for EBRPD installed 1,400 linear feet of water main at Arroyo Del Valle. The new water line brought water from Arroyo Road up to the new staging area and extended water service to the Department's property downstream of the dam.

- Ten family and two group barbecue units were installed in the day-use areas, along with 12 additional tables and benches.

Lake Perris. Construction of the Power Cove area was completed and dedicated in May. This area includes the State's first launching ramp designed especially for jet skis. In addition to the 4-lane launch ramp, other facilities provided are restrooms, a new parking lot for 55 cars and 63 car/trailers, area lighting, 700 linear feet of beach grading, landscaping, and 30 new picnic tables.

Improvements to Facilities

The following improvements were made at Lake Oroville during 1998 to help meet recreational demands.

- Informational bulletin boards ("You Are Here X Type") were installed.
- Two 300-foot channel runs were added at the Feather River Fish Hatchery.
- ADA compliant access for the disabled was provided at the Diversion Dam Overlook.
- The main parking area at Monument Hill of Thermalito Afterbay was graded and paved. The upper parking area was reconfigured and improved.

At Lake Del Valle, construction began on the general renovation of the boat launching facilities. When completed in summer 1999, this project will greatly enhance the boat launch, marina, and parking areas.

Oroville Recreation Plan

On October 1, 1992, the Federal Energy Regulatory Commission issued Order 2100-052, which required the Department to prepare a revised recreation plan for Lake Oroville. This plan replaced the original *Oroville Reservoir, Thermalito Forebay, and Afterbay Recreation Report* (Bulletin 117-6), which was prepared in December 1966. Another new plan, in FERC Order 2100-054, submitted June 1, 1993, and approved September 22, 1994, includes additional recreation facilities and addresses concerns raised by local residents regarding recreation and fishery-related issues.

Recreation plan implementation began in 1995 with establishment of the Lake Oroville Recreation Advisory Committee. This committee of local government, citizens' groups, and State agencies was formed to advise the Department on recreation plan implementation. The following elements are being developed or are already completed.

- Ten floating campsites were constructed and moored at various locations on the lake.
- An en-route RV camping area was added at the North Forebay area.
- Construction began on a duck brood pond and restroom and picnic facilities at Thermalito Afterbay.
- Buoys were deployed around the water-ski slalom course.
- Construction was completed on the 41-mile bike trail main loop.
- Construction of the Lime Saddle Boat Ramp improvements (Department of Boating and Waterways), an equestrian campground at Loafer Creek Recreation area, and lighting on Oroville Dam was completed.

- Fishery and fishing improvements included developing a fish management and stocking plan, stocking chinook salmon, and deploying fish shelters.

Most recreation and fish facilities were completed by 1998; certain elements of the plan may require time extensions to complete.

Fish Plantings

In 1998, the Department of Fish and Game continued its fish-planting activities at 10 SWP facilities. Total plantings of trout and chinook salmon decreased by nearly 3 percent in 1997 (Table 13-2).

At the Feather River Fish Hatchery and the Thermalito Afterbay rearing ponds, 10,410,600 fish were produced in 1998, down 24 percent from 1997. That figure includes 10,329,200 chinook salmon and 81,400 steelhead trout. Of the chinook salmon reared, 5,812,700 were fingerlings, 3,996,600 were advanced fingerlings, 448,800 were subcatchables, and 71,100 were catchables. Of the steelhead reared, all were yearlings.

Recreation Financing

Recreational facilities are financed in accordance with several legislative provisions, specifically, the Davis-Dolwig Act (Water Code Sections 11925 *et seq.*), Assembly Bill 12 (Water Code Sections 11912, 11915, and 11915.1), and the Environmental Water Act, Assembly bills 1441 and 1442 (Water Code Sections 12929 *et seq.*).

The Davis-Dolwig Act declared that providing for the enhancement of fish and wildlife and for recreation in connection with State water projects benefits all the people of California and that the costs attributable to such enhancement should be borne by them. The act also provided a procedure where the State's General Fund would reimburse the Department for those project costs allocated to recreation and fish and wildlife enhancement and for costs of acquiring property for recreation development.

The reimbursements were included in the Department's budget as appropriations from the General Fund and are used by the Department to pay for operations, maintenance, power, and replacement costs associated with operating the SWP for fish and wildlife enhancement and recreation.

Assembly Bill 12 provides for a \$5-million annual appropriation from tideland oil and gas revenues to fund joint capital costs of State water projects allocated to recreation, enhancement of fish and wildlife, and purchases of land for recreational uses. Through the 1985-86 fiscal year, the Department received \$90 million from tideland oil and gas revenues for this funding.

Assembly Bill 1442, known as the "Offset Legislation," offsets monies owed the California Water Fund by the SWP with reimbursements owed the project by the General Fund under the Davis-Dolwig Act. Monies owed the California Water Fund by the SWP were fully offset in 1998.

Appendix D to Bulletin 132, *Costs of Recreation and Fish and Wildlife Enhancement*, contains specific information about capital costs allocated to fish and wildlife enhancement and recreational enhancement and recreational development. This report to the Legislature is published annually by the Department.

Chapter 14

Financial Analysis

One part of the complex process of cost analysis

Significant Events

- On December 1, 1998, the Department sold \$207.2 million of Water System Revenue Bonds, Series U. The proceeds were used to provide long-term financing of construction expenditures, pay bond financing costs, and refinance \$93.3 million of previously issued bonds.
- On December 1, 1998, the Department sold \$20.6 million of Water System Revenue Bonds, Series V. The proceeds along with excess reserves and interest earnings were used to refinance \$20.7 million of previously issued bonds and pay for bond financing costs.

This chapter presents both a summary and a detailed explanation of State Water Project current financial analysis, capital costs and requirements, revenues and expenses, and bond activities for years 1999 through 2010.

The Department performs a financial analysis annually to ensure that the SWP financing program will have sufficient funds to meet construction obligations; project operation, maintenance, power, and replacement costs; and bond debt service payments expended for construction. The results of the current financial analysis, dated December 31, 1998, are presented in Tables 14-1 and 14-2 on pages 173 and 174.

Future conditions may change the financial analysis. These contingencies include:

- alterations in schedules of currently planned construction for future facilities;
- changes in economic conditions, including changes in interest rates and in SWP contractor entitlements due to changes in amounts of water needed, conserved, or reclaimed;
- completion of Delta transfer facilities;
- development of additional sources of water not foreseen at this time;
- deviations from the assumptions regarding actual rates of price escalations for future construction from those currently assumed for cost estimates;
- enlargement of the San Luis Canal;
- increases in capital costs related to additional conservation facilities; and
- outcomes of lawsuits now pending before the courts.

Capital Requirements and Financing

In conducting the current analysis, the Department projected that future construction and Davis-Grunsky Act Program costs through the year 2010 will total \$404 million. Special capital requirements for revenue bond financing of these construction costs are

projected at \$42 million for a total capital requirement of \$446 million. This projection includes construction and financing costs for the following significant SWP facilities planned for completion by 2010:

- Interim South Delta facilities;
- Gorman Creek Channel modifications on the West Branch of the California Aqueduct; and
- Extension of the East Branch of the California Aqueduct.

Most of these capital requirements will be financed from the projected sale of \$300 million of revenue bonds. The remaining \$146 million will be financed from current bond proceeds, capital resources revenues, and the transfer of excess revenues not needed for operation costs, debt service, or repayment of the California Water Fund.

The analysis of capital requirements and financing presented in Table 14-1 does not include the costs and financing of all facilities needed to develop the remaining yield necessary to meet the total 4.2 million acre-feet contractual commitment to long-term SWP water contractors. Also, Table 14-1 does not include costs of associated works that are essential for realizing full benefits from the SWP but are financed and constructed by local interests or State agencies other than the Department. Those facilities include on-shore recreational developments at SWP facilities and local distribution facilities.

The allocation of capital expenditures among various SWP purposes is detailed in Table 14-3.

Table 14-1

^a Reflects the Department's allocation to this purpose, irrespective of federal payments.

^b Includes costs currently unassigned to purpose, planning costs of deleted features of project facilities, initial costs of inventoried items, joint costs assigned to the federal government, and costs assigned to the Davis-Grunsky Act Program.

Capital Requirements

Lines 1 through 19 in Table 14-1 show actual and projected SWP capital requirements through 2010. Estimates of future capital expenditures include allowances for cost escalation from 1999 through 2010 at 3 percent per year for construction costs and 4 percent per year for right-of-way costs. Capital expenditures for the SWP also include requirements other than those for construction, such as disbursements made as part of the Davis-Grunsky Act Program (Line 15) and special capital requirements under revenue bond financing (Line 16). The Department will decide to construct facilities only after examining alternatives and completing environmental documentation and other review processes.

Line 1, Initial Project Facilities, includes only those facilities completed before 1974 (see Bulletin 132-74, Chapter 2). Additional costs after 1973 and estimated costs of remaining work on the initial SWP facilities are not included.

Line 2, North Bay Aqueduct, Phase II, consists of pipelines, pumping plants, and a small reservoir necessary to divert water from the western Delta to Napa and Solano counties for urban use. Phase II is connected with the Phase I facilities and was completed in 1968 (Phase I costs are included in the initial project facilities discussed in Line 1). Phase II became operational in May 1988.

Line 3, Delta and Suisun Marsh Facilities, shows historical costs in Column 1 that include planning costs for general Delta facilities and historical costs associated with the previously planned Peripheral Canal and overland water delivery facilities for the western Delta.

Also included are historical planning costs for Suisun Marsh as well as construction costs for the Suisun Marsh Salinity Control Gates and an access road. The projected amounts include projected planning costs plus projected costs for constructing four permanent barriers in the Delta and an additional intake at Clifton Court Forebay.

Line 4, Final Four Units at Banks Pumping Plant, includes costs of the final four 1,067-cfs units, which became operational in spring 1992, and final payments for plant equipment.

Line 5, Coastal Branch Aqueduct, Phase II, includes all costs for the planning, design, and construction of Phase II of the Coastal Branch of the California Aqueduct. Phase II construction began in October 1993 and was completed in 1997. Water deliveries from Phase II facilities began in July 1997. Future costs in this line are the estimated costs for settlement of outstanding construction claims.

Line 6, West Branch Aqueduct, shows costs for all facilities on the West Branch except Warne Powerplant. Warne Powerplant costs are included in Line 10. Projected costs include approximately \$9.4 million for Gorman Creek channel modifications.

Line 7, East Branch Enlargement, includes expenditures for first-stage construction of the East Branch Enlargement, including the enlargement share of powerplant costs at Mojave Siphon and Devil Canyon. (The remaining powerplant costs are included in Line 10.) Estimated East Branch Enlargement costs by facility are presented in Table 14-4. Costs for Alamo Powerplant consist of expenditures for Unit 1 facilities allocated to enlargement. Construction of Unit 2 has been deferred.

Table 14-4
Estimated Capital Costs for East Branch Enlargement

Facility	Dollar Amounts (in millions)
Aqueduct and siphons	112.5
Pearblossom Pumping Plant	70.1
Alamo Powerplant	5.0
Mojave Siphon Powerplant	49.6
Devil Canyon Powerplant and Second Afterbay	204.1
Total	441.3

All costs in Line 7 are allocated to and repaid by the seven Southern California contractors participating in the East Branch Enlargement.

Line 8, East Branch Improvements, shows all aqueduct costs on the East Branch not allocated to the enlargement project. Those costs include improvements constructed concurrently with the enlargement work and the reconstruction of the San Bernardino Tunnel Intake. Costs for powerplant construction at

Alamo, Mojave Siphon, and Devil Canyon are not included in this line.

Line 9, East Branch Extension, shows projected expenditures for Phase I of the proposed extension of the East Branch of the California Aqueduct. The East Branch Extension will extend the California Aqueduct east from the Devil Canyon Powerplant to a terminus at Noble Creek near Beaumont in Riverside County. The extension will provide water service to the San Gorgonio Pass Water Agency and the San Bernardino Valley Municipal Water District. All costs in Line 9 will be allocated to and repaid by the two participating contractors.

Line 10, Power Generation and Transmission Facilities, does not include the East Branch Enlargement share of costs for Alamo, Mojave Siphon, and Devil Canyon powerplants shown in Line 7 of Table 14-1. Estimated capital costs for facilities included in Line 10 are shown in Table 14-5.

**Table 14-5
Estimated Capital Costs for Power Generation and Transmission Facilities**

Facility	Dollar Amounts (in millions)
Powerplants	
Reid Gardner, Unit 4	280.3
Bottle Rock	120.9
South Geysers	49.6
Devil Canyon	36.8
Warne	84.5
Alamo	44.9
Mojave Siphon	31.2
Thermalito Diversion Dam	14.1
<i>Subtotal</i>	662.3
Transmission Lines	
Midway-Wheeler Ridge	10.7
Geysers-Lakeville	6.9
Total	679.9

Line 11, Additional Conservation Facilities, shows projected costs to plan and study additional conservation facilities. Specific planning activities and projected spending amounts for 1999 through 2010 are shown in Table 14-6. Expenditures for these items are being reviewed. Construction costs of additional conservation facilities are not included in the financial analysis.

**Table 14-6
Estimated Future Costs for Planning Additional Conservation Facilities**

Activity	Project Expenditures (in millions)
Future Water Supply	45.1
Other Planning Costs	10.2
Total	55.3

Line 11 does not include CALFED program costs. CALFED expenditures for preliminary planning and environmental impact report preparation are currently financed by appropriations from the General Fund. The Department assumes that future costs of the CALFED program will be financed from the General Fund.

Line 12, San Joaquin Drainage Facilities, includes projected costs of the San Joaquin Valley Drainage Monitoring Program. The activities in this program are monitoring, evaluating, reducing, and treating drainage, and investigating evaporation ponds.

The Department assumes that future costs of the drainage program will be financed by revenue transfers (Line 31).

Line 13, Other Costs, includes items such as general design and construction costs, costs of completing operation and maintenance facilities, and costs of other completion activities for the initial facilities of the California Aqueduct. Portions of those costs ultimately will be allocated to aqueduct units described in the preceding paragraphs.

Line 14, Total Project Construction Expenditures, is the total of Lines 1 through 13.

Line 15, Davis-Grunsky Act Program Costs, shows costs of the Davis-Grunsky Act Program, a financial assistance program to provide grants and loans to public agencies for constructing local water projects.

As of December 31, 1998, the Department had disbursed \$129 million (including \$8.5 million for administration) in grants and loans for local agencies throughout the State. Funds for Department projects currently authorized will be disbursed before 2000.

Table 14-10

Line 16, Special Capital Requirements under Revenue Bond Financing, presents special capital requirements at the time revenue bonds are sold. The financial analysis assumes that proceeds from any future revenue bonds will be used to pay for bond discounts, bond issuance costs, and debt service reserve requirements.

Information about the application of proceeds to these special requirements for actual and assumed revenue bond sales is presented in Table 14-7.

Line 17, Total Capital Requirements, is the total of Lines 14, 15, and 16.

Line 18, Power Facilities Capital Requirements, shows the total capital requirements for power facilities included in Line 17.

Line 19, Water Facilities Capital Requirements, shows the total capital requirements for water facilities included in Line 17.

Capital Financing

The SWP was constructed with three general types of financing: Burns-Porter, revenue bonds, and capital resources. Lines 20 through 33 of Table 14-1 present specific information about those sources of financing.

Burns-Porter Act. Burns-Porter financing is derived from the sale of California Water Resources Development Bonds (general obligation bonds) and State Tideland Oil Revenues deposited in the California Water Fund as authorized by the Burns-Porter Act (Water Code sections 12930-12944), approved by voters in November 1960. The Burns-Porter Act authorized an issue of \$1.75 billion of general obligation bonds of the State, which are repaid by revenues received according to the water supply contracts. Of that authorization, \$130 million have been reserved specifically for the Davis-Grunsky Act Program.

Proceeds from the sale of general obligation bonds are deposited in the California Water Resources Development Bond Fund-Bond Proceeds Account, from which monies may be expended only for the construction of SWP facilities and for the Davis-Grunsky Act Program. Approximately 30 percent of

the expenditures through 1998 for construction and the Davis-Grunsky Act Program were financed with general obligation bonds.

Monies deposited in the California Water Fund were appropriated for purposes outlined in the Burns-Porter Act. Such deposits were derived from a portion of the State Tideland Oil Revenues according to a continuing authorization. In 1989, legislation was enacted to provide for a schedule to repay the California Water Fund as required by the Burns-Porter Act. In 1998, the Department completed repayments on the California Water Fund, which totaled \$298 million (see Table 14-2, Line 36).

Revenue Bonds. Revenue bond financing is derived from the sale of revenue bonds as authorized by the Central Valley Project Act (California Water Code sections 11100-11925). The Department's authority to issue revenue bonds was confirmed by a decision of the California Supreme Court in 1963 (*Warne v. Harkness*, 60 Cal. 2d 579).

Proceeds from the sale of revenue bonds are deposited in the Central Valley Water Project Construction Fund, from which money is expended only for purposes specified in the resolution authorizing each bond sale. Those purposes, in addition to paying construction, planning, and right-of-way costs, may include funding the Debt Service Reserve Account, paying interest on bonds, and paying water system operating expenses during a specified period.

As of December 31, 1998, the Department had sold \$5.4 billion of revenue bonds. That amount includes \$2.2 billion of refunded bonds, leaving a total principal obligation of \$3.2 billion. Two bond issues were sold in 1998: \$207.2 million of Water System Revenue Bonds, Series U, sold December 1, 1998, and \$20.6 million of Water System Revenue Bonds, Series V, sold December 1, 1998. Additional issues of revenue bonds are planned to fund future SWP construction.

Capital Resources. Capital resources financing is derived from payments and appropriations (including a portion of Tideland Oil Revenues) authorized by a variety of special contracts, cost-sharing agreements, and legislative actions concerning the SWP, plus accrued interest on these funds.

Table 14-7
Application of Revenue Bond Proceeds

Bond Series ^a	Construction Expenditures	Other Capital Requirements					Total Principal Amount of Bonds

Grand Total	2,779.1	2.6	266.3	14.8	2,629.0	2,912.7	5,691.8 ^c

^a Actual bond issue for all except future water system facilities and future East Branch Enlargement bonds.
^b Bond financing and refunding costs include funds applied to debt service reserve requirements.
^c Includes \$2,215 million of refunded principal, leaving a net principal obligation of \$3,477 million.

Capital resources revenues are deposited in the Central Valley Water Project Construction Fund and may be expended for paying interest on general obligation bonds and costs of constructing SWP facilities.

According to the Department's financial management policy, the capital resources revenues are used first to cover any general obligation bond debt service that exceeds available revenues.

Capital Financing Sources

Capital financing sources include power revenue bonds, East Branch Enlargement bonds, East Branch Extension bonds, water system facilities bonds, initial project facilities bonds, proceeds from the Davis-Grunsky Act, California Water Fund monies, and capital resources revenues.

Line 20, Power Revenue Bonds through Series H, includes the proceeds applied from power revenue bonds for the Oroville, Devil Canyon, Castaic, Warne, Reid Gardner, Bottle Rock, Alamo, South Geysers, and small hydro projects.

No future power revenue bond sales are projected for the financial analysis.

Line 21, East Branch Enlargement, Current Bonds, shows that \$485 million of Water System Revenue Bond proceeds have been applied to the East Branch Enlargement project through December 31, 1998. Of this total amount, \$416 million were used for construction expenditures and \$69 million for bond discounts, interest costs, and debt service reserves.

No future East Branch Enlargement revenue bond sales are projected for the financial analysis.

Line 22, East Branch Extension, Current Bonds, shows that \$60 million of Water System Revenue Bond proceeds were available for the East Branch Extension project. Of this total, \$15.6 million had been spent through December 31, 1998. The remaining \$44.4 million will be used to pay future construction costs.

Line 23, East Branch Extension, Future Bonds, shows the Department's estimate of additional bonds required to complete construction of the East Branch

Extension and to pay for bond discounts, capitalized interest, and debt service reserve requirements.

Line 24, Water System Facilities, Current Bonds, shows that through December 31, 1998, \$1.4 billion of proceeds from Water System Revenue Bonds, Series A through Series V, were applied to SWP projects other than the East Branch Enlargement and the East Branch Extension. Of this total amount, \$1.2 billion were used to pay for construction expenditures and \$0.2 billion to pay for bond discounts, capitalized interest, and debt service reserve requirements.

Line 25, Water System Facilities, Future Bonds, shows that future water revenue bonds are needed to provide \$215 million for construction of SWP water system facilities and \$35 million for bond discounts, interest costs, and debt service reserve requirements.

Line 26, Subtotal, Water Revenue Bonds, is the total of Lines 21 through 25.

Line 27, Initial Project Facilities Bond Proceeds, shows the amount of general obligation bonds sold to provide initial financing costs for SWP facilities and for costs of planning certain additional conservation facilities.

Financing initial facilities from general obligation bonds was completed in mid-1972 and totaled \$1.444 billion—\$1.750 billion Burns-Porter Act authorization less \$130 million reserved for the Davis-Grunsky Act Program and \$176 million “offset” for additional conservation facilities. (The Burns-Porter Act provides that to the extent California Water Fund monies are expended, an equal amount of general obligation bonds are reserved [offset] for financing the construction of additional conservation facilities in certain watersheds.)

In mid-1972, the reservation of offset bonds was effectively limited to \$176 million, the total amount of California Water Fund monies expended up to that time. By mid-1972, all general obligation bonds authorized by the Burns-Porter Act had been offset, reserved for the Davis-Grunsky Act Program, or used for SWP construction.

Approximately \$8.5 million of the offset bonds were used to finance planning studies of the Middle Fork Eel River Development. This financial analysis is not based on the use of any offset bond proceeds to meet capital requirements. If at some time the State constructs an additional conservation facility, as specified in Water Code Section 12938, the remaining offset bonds could be sold.

Line 28, Davis-Grunsky Act Program Bond Proceeds, shows, for simplification, the entire \$130 million of capital expenditures authorized for the Davis-Grunsky Act Program according to the Burns-Porter Act as being funded by proceeds from the sale of general obligation bonds. In fact, \$28 million from the California Water Fund was used for the program in lieu of bond proceeds prior to 1969.

In making the financial analysis, the Department assumes that all authorized Davis-Grunsky bonds will be sold before 2000.

Line 29, Application of California Water Fund Monies, shows the amount of SWP costs financed under the Burns-Porter Act. The Act provides that any available money in the California Water Fund must be used for construction in lieu of proceeds from the sale of general obligation bonds.

When the Burns-Porter Act became effective in late 1960, approximately \$97 million had been accumulated in the fund. That balance plus subsequent appropriations, interest earnings, and other miscellaneous income to the fund through December 31, 1998, was used to finance a total of \$508 million of SWP costs.

Line 30, Interim Financing, shows the net annual amounts of funds flowing into and out of the Water Revenue Commercial Paper Notes program. The note program was established in March 1993 to provide an ongoing source of interim financing for Water System Projects prior to permanent financing from the sale of long-term revenue bonds. The Department has authority to issue up to \$150 million of Water Revenue Commercial Paper Notes. A positive number indicates money borrowed from the program to finance construction costs. A negative number indicates money repaid into the program. The financial analysis assumes that all funds bor-

rowed from the program will be repaid before the end of the analysis period.

Line 31, Application of Capital Resources Revenues to Construction, presents the Capital Resources Revenues applied for capital expenditures.

Line 32, Revenue Transfers Applied, shows monies assumed to be transferred to the California Water Fund according to provisions of the Burns-Porter Act and subsequently reappropriated to construction (see Line 37 in Table 14-2). Projected amounts for 1999 through 2010 include funds to finance expenditures for San Joaquin drainage facilities, as indicated in Line 12 of Table 14-1, and expenditures for additional conservation facilities, as indicated in Line 11.

Line 33, Subtotal, Other Capital Financing, is the total of Lines 27 through 32.

Line 34, Total Financing of Capital Requirements, totals Lines 20, 26, and 33.

Annual Revenues and Expenditures

In conducting the financial analysis of SWP operations, the Department concluded that projected payments by contractors and other revenues will be adequate to pay annual operations, maintenance, power, and replacement costs and meet all repayment obligations on funds used to finance SWP construction and other authorized costs during the period 1999 through 2010. Data on annual revenues and expenditures are presented in Table 14-2. A detailed discussion of each line item is presented below.

Project Revenues

SWP revenues consist primarily of SWP contractor payments required under their individual long-term water supply contracts. Those revenues are deposited in two funds: the Central Valley Water Project Revenue Fund, where all revenues pledged to revenue bonds are placed, and the California Water Resources Development Bond Fund-Systems Revenue Account, where all other SWP operating revenues are placed. Use of those funds is limited to paying operating costs and debt service, except that revenues in excess of those costs may be transferred to the California Water Fund.

Line 1, Capital Resources Revenues, includes:

- federal payments for SWP capital expenditures;
- appropriations for capital costs allocated to recreation;
- appropriations for SWP capital expenditures prior to passage of the Burns-Porter Act and according to Senate Bill 261 (1968);
- payments from Los Angeles Department of Water and Power for Castaic power development;
- advances from water contractors for construction of requested works;
- investment earnings on the Capital Resources Account; and
- investment earnings on unexpended revenue bond proceeds.

Historically, appropriations for capital costs allocated to recreation and fish and wildlife enhancement have amounted to \$5 million per year, which have been appropriated by the California Legislature from Tideland Oil Revenues. There have been no appropriations since 1985, and no appropriations are indicated in the Financial Analysis for the period 1999-2010. According to legislation enacted in 1989, a portion of the amount owed to the SWP by the State for costs allocated to recreation and fish and wildlife enhancement was offset against the amount the SWP owed to the California Water Fund (see line 36).

Lines 2 through 9, Water Contractor Payments, show amounts of the separate elements of water contractor payments.

Amounts in Line 4 also include revenues sufficient to cover costs associated with sales of excess power. Appendix B of this bulletin presents a detailed explanation of payments identified in Lines 2 through 9.

Operations, maintenance, power, and replacement costs are repaid as they are incurred as part of the Transportation Charge; therefore, no interest charges are included. Construction costs included in the Transportation Charge and all construction and annual OMP&R costs included in the Delta Water Charge are to be repaid with interest at the Project Interest Rate.

The Project Interest Rate, as defined in Article 1(r) of the standard provisions for water supply contracts, is the weighted average of the rates paid on certain securities issued and loans obtained to finance SWP facilities as described below.

According to the original contract provisions, the basis for determining the Project Interest Rate was the weighted average of rates paid on general obligation bond sales only. In 1969, after Oroville Revenue Bonds were issued, the contract was amended to expand the basis to include rates on all other securities sold and loans obtained thereafter for financing SWP facilities, including revenue bonds (see Bulletin 132-70, page 28).

However, not all proceeds from the sale of revenue bonds are melded into the calculation of the Project Interest Rate. Only those proceeds applied to construction costs (the only application of general obligation bonds permitted by law) and those consumed by the bond discount (a component of the total interest cost of a revenue bond issue) are included in the calculation (see Table 14-8).

Calculations for determining the Project Interest Rate do not include proceeds from the sale of revenue bonds for Off-Aqueduct Power Facilities, the East Branch Enlargement facilities, or water system facilities defined in the Water Revenue Bond Amendment. Table 14-9 lists all bond sales by date and presents basic information used in the calculation of the Project Interest Rate.

Information about contractor water charges in Appendix B is based on known conditions and substantiates the Department's determination of 2000 water charges to be billed July 1, 1999. However, information about significant differences between the sum of future charges included in Lines 2 through 9 of Table 14-2 and the substantiation of 2000 charges included in Appendix B are as described below.

- Future capital costs in Appendix B are based on the prevailing prices as of December 31, 1998. Those costs presented in the financial analysis include allowances for price escalation.
- Pre-1999 charges in Appendix B represent charges as they should have been according to currently known conditions. Pre-1999 charges

- included in Table 14-2 are those actually paid as part of previously determined bills.
- Charges in Appendix B are unadjusted for past overpayments or underpayments. Charges included in Table 14-2 for 1999 and thereafter have been adjusted for any apparent overpayments or underpayments of pre-1999 charges.
- Charges in Appendix B for East Branch Enlargement costs include the amounts for debt service and 25 percent cover for the East Branch Enlargement share of the Series A through Series V bonds. Charges in Table 14-2 also include amounts of the debt service and cover for assumed future bonds.

- The water bond revenue surcharge in Appendix B applies only to the Series B through Series V bonds. Surcharge values included in Table 14-2 apply to Series B through Series V bonds and to assumed future issues required to finance SWP construction costs included in Table 14-1.

Line 10, Subtotal, Water Contractor Payments, is the total of Lines 2 through 9.

Line 11, Revenue Bond Cover Adjustments, represents the credit to contractors resulting from the cover of 25 percent of 1 year's debt service for Off-Aqueduct Power Facility Bonds and Water System

Table 14-8
Effect of Revenue Bond Proceeds on Project Interest Rate
(Millions of Dollars)

Total		174,034,974	10,288,196		
Portion allocated to Project Interest Rate		63,856,942	2,946,804	4.615	4.615

^a A unit equivalent to one dollar of principal amount outstanding for one year.

^b The total interest cost (without regard to discounts paid or premiums received) divided by the total dollar-years, expressed as a percent.

^c Determined by dividing cumulative interest costs by cumulative dollar-years, expressed as a percent. Excluding Oroville Field Division bonds and revenue bonds for Off-Aqueduct Power Facilities, the East Branch Enlargement facilities, East Branch Extension facilities, or water system facilities as defined in the Water Revenue Bond Amendment.

Revenue Bonds. Cover is collected as required by the bond resolutions to provide security to the bondholders. If not needed to meet annual bond service, the cover is credited to the contractors in the following year. The annual charges for the following cost components include an amount for bond cover:

- minimum OMP&R component of the Transportation Charge for Off-Aqueduct Power Facilities;
- Water System Revenue Bond Surcharge;
- capital cost component of the Transportation Charge for East Branch Enlargement Facilities;
- capital cost component of the Transportation Charge for Coastal Branch Extension Facilities; and
- capital cost component of the Transportation Charge for East Branch Extension Facilities.

Line 12, Rate Management Adjustments, shows the projected amount of revenue reductions allocated to SWP contractors after repayment of the California Water Fund (see Line 36). Under provisions of the Monterey Amendment, the reduction amount allocated to agricultural contractors is deposited into a trust fund to stabilize payments in water-short years. The urban contractor allocation is applied as a direct reduction in charges.

Line 13, Federal Payments for Project Operating Costs, shows federal payments made according to the December 31, 1961, agreement between California and the United States providing for the Department to operate and maintain the San Luis Joint-Use Facilities. According to the January 12, 1972, supplement to the agreement, the U.S. Bureau of Reclamation initially paid 45 percent of OM&R costs for those activities. (The percentage does not apply to power costs; USBR and the Department provide their own power to pump water through the joint facilities.)

The percentage paid by USBR is scheduled to be reviewed every 5 years by USBR and the Department. The most recent review of the percentage paid by the USBR was completed in 1987 and resulted in a federal share of 44.09 percent. The amounts in Line 13 are based on the assumption that the federal share will continue at 44.09 percent for calendar years 1999 through 2010.

Line 14, Appropriations for Operating Costs Allocated to Recreation, shows appropriations made under the Davis-Dolwig Act. In passing the Davis-Dolwig Act, the California Legislature declared its intent that except for funds provided according to Assembly Bill 12 (1966), the Department budget will include appropriations of monies from the General Fund necessary for enhancement of fish and wildlife and recreation in connection with State water projects.

Annual OMP&R costs allocated to recreation and fish and wildlife enhancement are to be paid by annual appropriations from the General Fund. For fiscal years 1983-84 through 1998-99, no funds were appropriated for recreation and fish and wildlife enhancement purposes. No appropriations are indicated for 1999 through 2010.

According to legislation enacted in 1989, a portion of the amount owed to the SWP by the State for costs allocated to recreation and to fish and wildlife enhancement was offset against the amount the SWP owed to the California Water Fund (see line 36).

Line 15, Local Agency Payments under Davis-Grunsky Loan Repayment Contracts, shows repayment for \$52.5 million of loans disbursed as of December 31, 1998. Repayment on any future loans was assumed to be beyond the period covered by the financial analysis.

Line 16, Revenue Bond Proceeds, includes bond proceeds classified as special reserves according to the description of revenue bond financing in Line 16 of Table 14-1. Those proceeds, used for capitalized OMP&R costs, revenue bond service, and debt service reserves, are not classified as revenues but are included in this line to simplify the financial presentation.

Line 17, Interest Earnings on Operating Revenues, includes interest earnings on unexpended proceeds from the sale of general obligation bonds, interest on operating reserves, and other short-term investment earnings on SWP revenues.

Line 18, Payments under Oroville-Thermalito Power Sale Contract, shows payments from Pacific Gas and Electric Company, Southern California Edison

Company, and San Diego Gas and Electric Company. Those utilities purchased all power generation from Hyatt and Thermalito powerplants before April 1, 1983, according to a power sale contract dated November 29, 1967. The 1952-98 entry includes amounts of final settlement of payments made according to the contract.

Line 19, Miscellaneous Revenues, includes all other operating revenues not included in Lines 2 through 18.

Line 20, Subtotal, Other Revenues, is the total of Lines 13 through 19.

Line 21, Total Operating Revenues, is the total of Lines 10, 11, 12, and 20.

Line 22, Total Operating Revenues and Capital Resources Revenues, is the total of Lines 1 and 21.

Project Expenses

Project expenses include:

- operations, maintenance, and power costs;
- deposits to replacement reserves;
- deposits to special reserves;
- capital resources expenditures; and
- debt service.

Revenue bond proceeds earmarked for debt service during construction and the first year's operating expenses are deposited in the Central Valley Water Project Construction Fund and disbursed according to resolutions authorizing the issuance of such bonds.

Water contractor revenues associated with power facility operating costs and debt service are deposited in the Central Valley Water Project Revenue Fund for appropriate disbursement. All other operating revenues are deposited in the California Water Resources Development Bond Fund-Systems Revenue Account and are disbursed according to the following four priorities of use as specified in the Burns-Porter Act:

1. SWP operations, maintenance, power, and replacement costs;
2. general obligation bond debt service;

3. repayment of expenditures from the California Water Fund; and
4. deposits to a reserve for future SWP construction.

Project expenses are presented in Lines 23 through 33 of Table 14-2.

Line 23, Project Operations, Maintenance, and Power Costs, shows the OM&P portion of the historical and projected costs presented in Table 14-10 on page 175.

Table 14-10 and Line 23 of Table 14-2 also include amounts of the operations and maintenance costs for the federal share of joint facilities and those OM&P costs allocated to recreation, which are intended to be offset by revenues indicated in Lines 13 and 14.

Allowances for cost escalations are included in OM&P costs through the year 2000. Allowances for additional long-term price escalations in the future are not included in these estimates because changes in OM&P costs do not substantially affect the overall results of the financial analysis. (For the most part, changes in OM&P costs cause direct offsetting changes in operating revenues.)

Power costs make up the major item of annual operating expenses for the SWP. Assumptions about future power sources and costs are discussed in Chapter 10, "Power Resources." Line 23 also includes costs associated with power transactions that result in the sale of power not required for the delivery of water.

Line 24, Deposits to Replacement Reserves, shows funds set aside as required by contract for replacing existing SWP facilities. By December 31, 1998, \$57.7 million had been spent for replacement costs; the balance of the replacement reserve as of that date was \$24.3 million. Replacement reserve amounts are also included in Table 14-10.

Line 25, Deposits to Special Reserves Under Revenue Bond Financing, includes two significant components: special reserve deposits related to revenue bonds and capital resources revenue carryover from prior years used for construction in the current year. Special reserve deposits are the net of several income

and expenditure items. Income items related to revenue bonds are as follows:

- proceeds set aside to pay bond interest during construction (capitalized interest);
- proceeds set aside for first year operating costs (capitalized operations and maintenance);
- water contractor payments or bond proceeds set aside for debt service reserves;
- water contractor payments for revenue bond cover requirements; and
- deposits to and withdrawals from operating reserves to meet day-to-day cash flow requirements.

The 1952-98 column also includes advances to the Department's revolving fund for working funds to purchase mobile equipment and to meet day-to-day operating expenses.

The expenditure items related to revenue bonds are as follows:

- debt-service cover payments returned to water contractors;
- debt-service reserve payments returned to water contractors;
- surplus-account funds returned to water contractors or applied to meet expenses;
- total capitalized interest paid out; and
- total capitalized operations and maintenance paid out.

Special reserves, reduced over time as reserved amounts, are used for their respective purposes. The amount indicated each year in Line 25 indicates the change from the previous year. A negative number indicates a withdrawal of special reserves to meet expenses, while a positive number indicates a deposit.

Line 26, Capital Resources Expenditures, includes the amount of capital resources revenues applied to construction that is shown in Line 31 of Table 14-1. In Table 14-2, these expenditures are funded out of withdrawals from the reserves in Line 25 and do not affect net revenues shown in Line 35.

Lines 27 and 28, Payment of Debt Service on Bonds Sold through December 31, 1998, show the total

principal and interest payments on bonds sold to date. Table 14-11 on page 176 summarizes payments on general obligation bonds (Series A through Y water bonds), power revenue bonds by project, and water system revenue bonds.

The last bonds, sold on December 1, 1998, were the Series V Water System Revenue Bonds. Proceeds from the Series V bonds were used to refinance previously issued bonds and to pay for bond financing costs.

Lines 29 and 30, Payments on Projected Future Water Bonds, include the projected annual service amounts for future water revenue bonds included on Lines 23 and 25 of Table 14-1 for the East Branch Extension and other water system facilities. Assumptions about the service on these future bonds are as follows:

- interest costs for the water revenue bonds average 6.0 percent; and
- bonds are to be repaid within 35 years of sale with maturities commencing in the year following the date of sale and with equal annual bond service for the principal repayment period.

Lines 31 and 32, Total Payments of Bond Debt Service, show the total of principal payments indicated on Lines 27 and 29 and the total of interest repayments indicated on Lines 28 and 30.

Line 33, Subtotal, Debt Service, is the total of Lines 31 and 32.

Line 34, Total Operating Expenses and Debt Service, is the total of Lines 23, 24, 25, 26, and 33.

Line 35, Net System Revenues, shows the annual amounts of revenues remaining after the payment of operating costs and bond debt service costs.

Line 36, California Water Fund Repayment, shows repayments according to the Burns-Porter Act, which requires that after operation, maintenance, replacement, and bond service requirements have been satisfied, SWP revenues be transferred to the California Water Fund to reimburse the fund for monies expended for construction of the State Water Resources Development System.

In 1982 and 1983, the Department transferred \$70 million toward the repayment of the California Water Fund. The legislature subsequently appropriated all these funds to the State's General Fund. Legislation enacted in 1989 provided for the orderly, scheduled reimbursement of the remaining balance owed to the California Water Fund over a period of 10 years. A portion of this reimbursement was offset by the amounts owed to the SWP by the State for costs allocated to recreation and fish and wildlife enhancement.

Repayment of the California Water Fund was completed in 1998. As of December 31, 1998, reimbursements to the California Water Fund totaled \$508 million. Of this total, approximately \$296 million were direct repayments and \$212 million were offsets for recreation and fish and wildlife enhancement expenditures.

Line 37, Revenues Used for Capital Expenditures, includes the amounts required annually for financing scheduled capital expenditures. Revenues not needed for operating costs, debt service, or repayment of the California Water Fund are available for financing SWP capital expenditures.

Future Costs of Water Service

Estimates of future water costs are useful to SWP contractors in short-range and long-range planning of water needs, operations, and budgets.

Unit water charges shown in Table 14-12 represent both unescalated and escalated costs of water according to service areas for years 1999 and 2001. The unit rates in Table 14-12 include costs of existing and future SWP facilities accounted for in Table 14-1 and Table 14-7. The unit charges are based on the assumption that in 1999 and 2001, the SWP will be able to deliver the entire amounts of water requested by contractors. The unit water charges included in Table 14-12 are listed both as unescalated 1998 dollars and as escalated rates reflecting assumed future inflation.

The Department's estimates of future capital expenditures include allowances for escalation of construction costs at 3 percent per year for 1999 through 2010. The escalation rates for future power sources vary, depending on the source of energy.

Table 14-12
Estimated Unit Water Charges for 1999 and 2004, by Service Area
(Dollars per Acre-Foot)

Information for this chapter was provided by the State Water Project Analysis Office in conjunction with the Division of Fiscal Services.

Chapter 15
**SWP Education and
Information**

Sesquicentennial and water awareness event at Edmonston Pumping Plant

Significant Events

- In June 1998, the Office of Water Education staged and videotaped a State Water Project history seminar, featuring presentations by former Department directors and other experts on the planning, construction, and development of the SWP. Videotapes of the seminar were sent to the State Water Contractors. The seminar was attended by State Water Contractors and their member agencies.
- During 1998, OWE expanded its emergency response capability by training more than 40 emergency public information officers for temporary duty during crises.
- During the 1998 flood season, OWE helped flood managers conduct frequent news briefings and provided public information officer staff for media liaison at the State-Federal Flood Operations Center. The Graphic Services Branch provided photo and videotape documentation of flood incidents.
- OWE's 1998 work products won 10 awards in the annual competition sponsored by the State Information Officers Council.
- OWE created several portable sesquicentennial exhibits showcasing 150 years of water development in California.

The Department of Water Resources' Office of Water Education conducts public information and education programs to inform the news media and educate the public about the value and operations of the State Water Project. These programs use an array of public outreach methods, including news media relations, publications, videos, Internet web sites, SWP visitor centers and tours, brochures, exhibits, and special events.

SWP Information and Education Programs

Media Outreach

Flood Emergency. Flood-related news outreach and emergency response preparedness were top priorities for the Office of Water Education during 1998.

OWE provided special training for flood emergency public information officers, giving instruction on emergency response and media training to more than 40 emergency public information officers.

During the winter flood season of 1998, OWE public information officers staffed the State-Federal Flood Center, assisting flood managers with media liaison. Media center briefings provided a key function of channeling news media to one place for comprehensive daily updates from Flood Center experts.

Daily flood news updates by e-mail became the foundation for a water news "electronic clipping" service provided by OWE to Department managers and program supervisors.

OWE prepared a new publication, *How to Fight Flooding at Home: Easy Ways to Keep Water Out of Your House*. It was distributed by the California Conservation Corps at sandbag training sessions in neighborhoods throughout the State.

In January 1998, public information officers provided media liaison and issued news releases on the safe recovery of a 42-foot Department boat that sank

in Lake Oroville. The Graphic Services Branch provided photo and video coverage.

Other Media Activities. In other media activities during 1998, the Department issued news releases on many topics relating to the SWP, project operations, California Aqueduct repairs, and water supply; provided numerous media advisories, interviews, and faxes; developed news releases with other water agencies; and assisted the CALFED Bay-Delta Program with its public relations program.

Key Department outreach included a March announcement that the SWP planned to make 100 percent of requested deliveries during 1998; April and May media releases on completion of permanent repairs to two sites along the California Aqueduct; and an October update on flood season preparations.

To help Department officials deal effectively with news reporters, OWE continued its 1-day training sessions, *Working With the News Media*. The workshop, taught by a professional trainer with experience as a government information official and television news director, provided Department officials expert, practical guidance on routine and emergency communications with the news media.

Internet Web Site

The Department's Central Internet website, the DWR California Water Page (<http://www.dwr.water.ca.gov>), has been online since January 1995. Usage tripled during critical flood periods.

Publications

DWR People. The Department's employee newsletter continued as a quarterly publication during 1998. Stories spotlight employees, their accomplishments, skills, news, awards, and retirements. This year's issues featured stories on major California aqueduct repairs, the State Water Project Analysis Office, and the water safety program.

DWR Update. An employees-only online newsletter, *DWR Update*, provides news accounts on Department changes and events, employee assignments and accomplishments, statewide water issues, and various announcements. Information is added and revised weekly or as news develops.

DWR News. This news magazine is published twice yearly, in spring and fall. It features in-depth reporting of departmental programs and projects, as well as significant statewide water issues. During 1998, major stories included a feature on former Director David N. Kennedy and a retrospective summary of major departmental projects during his 15-year tenure from 1983 to 1998.

SWP Atlas. Initial work on a comprehensive SWP Atlas was begun in December 1998, at the direction of former Director David N. Kennedy. The atlas will feature background information of the SWP, as well as detailed technical drawings and key facility statistics. Publication is scheduled for mid-1999.

Brochures. The Department routinely publishes an array of brochures describing SWP facilities. During 1998, OWE revised and reprinted four brochures on SWP-related topics: *California's State Water Project*, *State Water Project*, *Recreation Facilities*, *Devil Canyon Powerplant*, and *Vista del Lago Guide* (also in Spanish).

In addition, the Department prepared new brochures on *Staying Safe on the California Aqueduct with Albert and Einstein* and on the SWP visitors centers. The *Staying Safe on the California Aqueduct* brochure uses the Department's water mascot cartoon characters, Albert and Einstein, to teach children water safety. The SWP visitors centers' brochure, *California's Water*, promotes visits to the three visitors centers, as well as Edmonston Pumping Plant and Banks Pumping Plant.

Sesquicentennial. A special sesquicentennial brochure was created to illustrate water development highlights during 150 years of California history.

Video Projects

Coastal Video. *Pipeline*, a video documenting construction of the Coastal Branch, was produced and distributed.

Levee Improvement. *Nick of Time*, a video demonstrating techniques used to improve 5 miles of Delta levee, was produced. It recounted the Department's levee improvement activities to protect the town of Thornton from flooding.

SWP History. The Graphic Services Branch videotaped the June 1998 SWP history seminar featuring presentations by former Department directors about the history and importance of the SWP.

Flood Footage. During the 1998 floods, the Graphic Services Branch provided photographic and videotaped documentation of flood events. In 1998, a videotape of the February flood incidents was shot and edited for presentation to the Department's Division of Flood Management.

Delta Program. The Graphic Services Branch produced a videotape, entitled *The Delta Dilemma*, to summarize CALFED's efforts to improve Delta water quality, water supply reliability, and ecosystems.

Video Catalog. The Department produced a new catalog to promote public access to all current Department videos.

Visitors Centers Program

Activities. During 1998, staff at the visitors centers welcomed 447,365 visitors and provided information on the SWP and its operations. In addition to meeting visitors' needs, staff also performed community outreach to promote water safety and participated in community events.

In March 1998, San Luis Field Division took part in the Wild on Wetlands Weekend at the Los Banos campus of Merced College. Staff conducted tours at the Gianelli Pumping-Generating Plant, Sisk Dam, and Romero Visitors Center. In April 1998, SLFD

staff provided information to the public attending Farm Day at Merced College. Southern Field Division staff took part in an October 11 "NatureFest" in Frazier Park, the May 30 annual "Water Awareness Fair" in Palmdale, and assisted at a May 16 bikeway event in Antelope Valley. Staff activities at other special events during May 1998 are listed under Water Awareness Month Activities. In October, staff from San Joaquin and Southern field divisions and headquarters worked at three Department booths at the Eastside Reservoir Recreation Show near Hemet.

The July 4 fireworks at Oroville Dam, cosponsored by Oroville Field Division, attracted a crowd estimated at 10,000 people. About 3,000 people attended OFD's Fall Salmon Festival at the Feather River Fish Hatchery. The Department provided an educational booth and conducted hatchery tours.

Table 15-1 shows the number of visitor-days in the different field divisions.

Table 15-1
Visitor-Days Recorded in 1998, by Location

<i>Field Division</i>	<i>Visitor-Days</i>
Oroville	126,115
Delta	812
San Luis	181,363
San Joaquin	5,347
Southern	133,728
Total	447,365

Visitors Centers Evaluations

During 1998, staff conducted evaluation surveys at Vista del Lago, Romero, and Oroville visitors centers. A total of 988 visitors took part in the surveys.

The survey results indicated a high level of customer satisfaction with the information provided by visitors centers. Visitors reported that brochures, exhibits, and interaction with staff provided excellent information on water. However, the results also reported that highway signage needed improvement.

Water Safety Education

OWE designed and developed *Albert and Einstein* water safety messages that were shown in 115 Century movie theaters in cities near the California Aqueduct, starting in May 1998. The messages consisted of three

slides that were cycled every 6 to 7 minutes prior to the start of each movie. Each message was 10 to 15 seconds long, reading (1) "Don't Swim in the California Aqueduct, (2) Learn to Swim, Learn to Float, Be Drown-Proof for Life, and (3) Swim With a Buddy, It's Safer." High recreational use of SWP facilities makes water safety a major factor in how the Department relates to users of SWP facilities.

An intensive effort by staff of the five field divisions aimed at encouraging water safety in their communities resulted in substantial outreach to groups in communities along the California Aqueduct.

SWP Visits and Tours

During 1998, the Department welcomed 67 delegations with 1,087 individuals from the following countries: Australia, Brazil, Canada, China, Colombia, Egypt, Ecuador, Hungary, Japan, Korea, Pakistan, Saudi Arabia, Taiwan, Tanzania, and Turkey.

Displays and Exhibits

During 1998, the Department created several new sesquicentennial exhibits featuring highlights of 150 years of water development in California. The sesquicentennial exhibits and matching information brochures were especially popular with water districts, where many were displayed at the offices. The historic displays were shown at about 40 venues statewide during 1998, including the California State Fair.

OWE's design unit created and installed a James Beckwourth exhibit at the Oroville Visitors Center. James Beckwourth was a famous African-American pioneer guide who helped the settle the region.

In January, recreational opportunities along the SWP were displayed for visitors at the International Sportsmen's Exposition at CalExpo in Sacramento. Emphasis was on Northern California recreation sites.

In March, Southern California SWP sites were highlighted at the Fred Hall International Boat Show in Long Beach.

The Association of California Water Agencies' spring conference provided an opportunity to promote the SWP's role in transporting water.

In October, staff participated in the sesquicentennial exhibit at the League of California Cities Exposition, held in Long Beach.

School Education Program

The Department continues support of its School Education Program, which began in 1991. The program's goal is to provide students and educators with a statewide perspective on water issues, such as conservation, conveyance systems, and the water cycle. This is done by developing and promoting high quality materials that are provided at no charge to schools, educators, and water districts.

Key program achievements for 1998 included:

- A video produced in June 1998, entitled *Water: Who Needs It?*, for children in grades K-6. This video teaches students the importance of water to living things, and how they can protect and conserve water.
- By the end of 1998, a teacher-student activity packet was developed for the *Water: Who Needs It?* video. The packet helps teachers lead activities that reinforce concepts in the video.
- Earlier in the spring, the Department developed a similar packet for *The Water Cycle* video, a program produced in 1997. It depicts the four phases of the water cycle. This packet also reinforces concepts presented in the video.

Water Awareness Month Activities

During 1998, the Department, for the 11th consecutive year, celebrated May as Water Awareness Month in California.

During May, the Department worked with water agencies throughout California to develop a water-education kit suitable for teachers and students in grades K-6. This cooperative effort resulted in sending 3,000 free education kits statewide, featuring new activities on water.

The Department celebrated Water Awareness Month at a series of special events, including:

- May 6-8, California Water Plan Exhibit at ACWA spring conference in Monterey. This exhibit drew attention to key findings in Bulletin 160-98, the most recent edition of the *California Water Plan*.
- May 7, Edmonston Pumping Plant Water Awareness Fishing Event. The Department's San Joaquin Field Division hosted 150 students from three schools in the Kern County communities of Taft and Bakersfield. This event drew coverage by regional news media, including the *Bakersfield Californian*.
- May 8, Water Serenade at ACWA spring conference. Eighty students from Monte Vista Elementary School in Monterey sang a new song about water at the May 8 breakfast session of the ACWA conference.
- May 9, Hyatt Powerplant Open House at Oroville Dam. Oroville Field Division sponsored this event, timed to coincide with Feather Fiesta Days, a major Oroville community festival.
- May 16, California Aqueduct Biking Event. More than 100 bicyclists enjoyed this special ride along a 28-mile portion of the California Aqueduct in Antelope Valley in Southern California. SFD sponsored this event jointly with the Antelope Valley Trails, Recreation and Environmental Council, and the Grapevine Mountain Bike Association.
- May 16, Kids' Fishing Day at San Luis Reservoir. SLFD cosponsored this Ninth Annual Kids' Fishing Day at San Luis Creek at O'Neill Forebay. Other sponsors and supporters included the Department of Parks and Recreation and the Four Rivers Natural History Association.

Traveling exhibits on California water history during May were featured at four venues as part of Water Awareness Month: May 3 at the Cinco de Mayo Fiesta in San Jose; May 14-17 at the Gold Discovery Exposition in Auburn; May 21-25 at the National Orange Show in San Bernardino, and May 30-31 at the Apricot Festival in Patterson.

Information in this chapter was contributed by the Office of Water Education.

Appendix B

Data and Computations

Used to

Determine 2000 Water Charges

The Department of Water Resources annually furnishes Statements of Charges to the 29 long-term State Water Project water supply contractors. Article 29(e) of the Standard Provisions for Water Supply Contracts, approved August 3, 1962, describes those statements:

All such statements shall be accompanied by the latest revised copies of the document amendatory to Article 22 and of Tables B, C, D, E, F, and G of this contract, together with such other data and computations used by the State in determining the amounts of the above charges as the State deems appropriate.

To comply with Article 29(e), the Department performs an annual comprehensive review and redetermination of all water supply and financial aspects of the SWP for the entire project repayment period. This annual redetermination is performed in accordance with Article 22(f) and Article 28 of the water contracts, which concern the Delta Water Rate and annual transportation charges, respectively.

Appendix B includes data used to document the redetermination of water charges to be paid by contractors during calendar year 2000. The information is based on established data about the SWP, both known and projected, as of June 30, 1999.

The computational procedures and interrelationships between tabulations in this appendix are outlined in Figure B-1 and Figure B-2. All tables referenced in Figures B-1 and B-2 follow this text.

Types of Water Charges

Charges to SWP water supply contractors include the costs of facilities for the conservation and development of a water supply and the conveyance of such supply to SWP service areas. These facilities are

classified as “Project Conservation Facilities” and “Project Transportation Facilities” in the Standard Provisions for Water Supply Contract. The names of the main facilities in each classification follow.

Project Conservation Facilities

- Frenchman Dam and Lake
- Grizzly Valley Dam and Lake Davis
- Antelope Dam and Lake
- Oroville Dam and Lake Oroville
- Oroville power facilities
- Delta Facilities
- A portion of the California Aqueduct from the Delta to Dos Amigos Pumping Plant
- Sisk Dam, San Luis Reservoir, and Gianelli Pumping-Generating Plant

Project Transportation Facilities

- Grizzly Valley Pipeline
- North Bay Aqueduct
- South Bay Aqueduct, including Del Valle Dam and Lake Del Valle
- Remainder of the California Aqueduct from the Delta to Dos Amigos Pumping Plant and all facilities south, including dams and lakes in Southern California
- Off-Aqueduct Power Facilities (Reid Gardner Unit No. 4, Bottle Rock Powerplant, and South Geysers Powerplant)

The standard provisions provide for a Delta Water Charge and a Transportation Charge for project water.

The Delta Water Charge is a unit charge applied to each acre-foot of SWP water the contractors are entitled to receive according to their contracts. The unit charge, if applied to each acre-foot of all such entitlements for the remainder of the project repayment period, is calculated to result in repayment of all

Figure B-1
Relationships of Data Used to Substantiate Statements of Charges

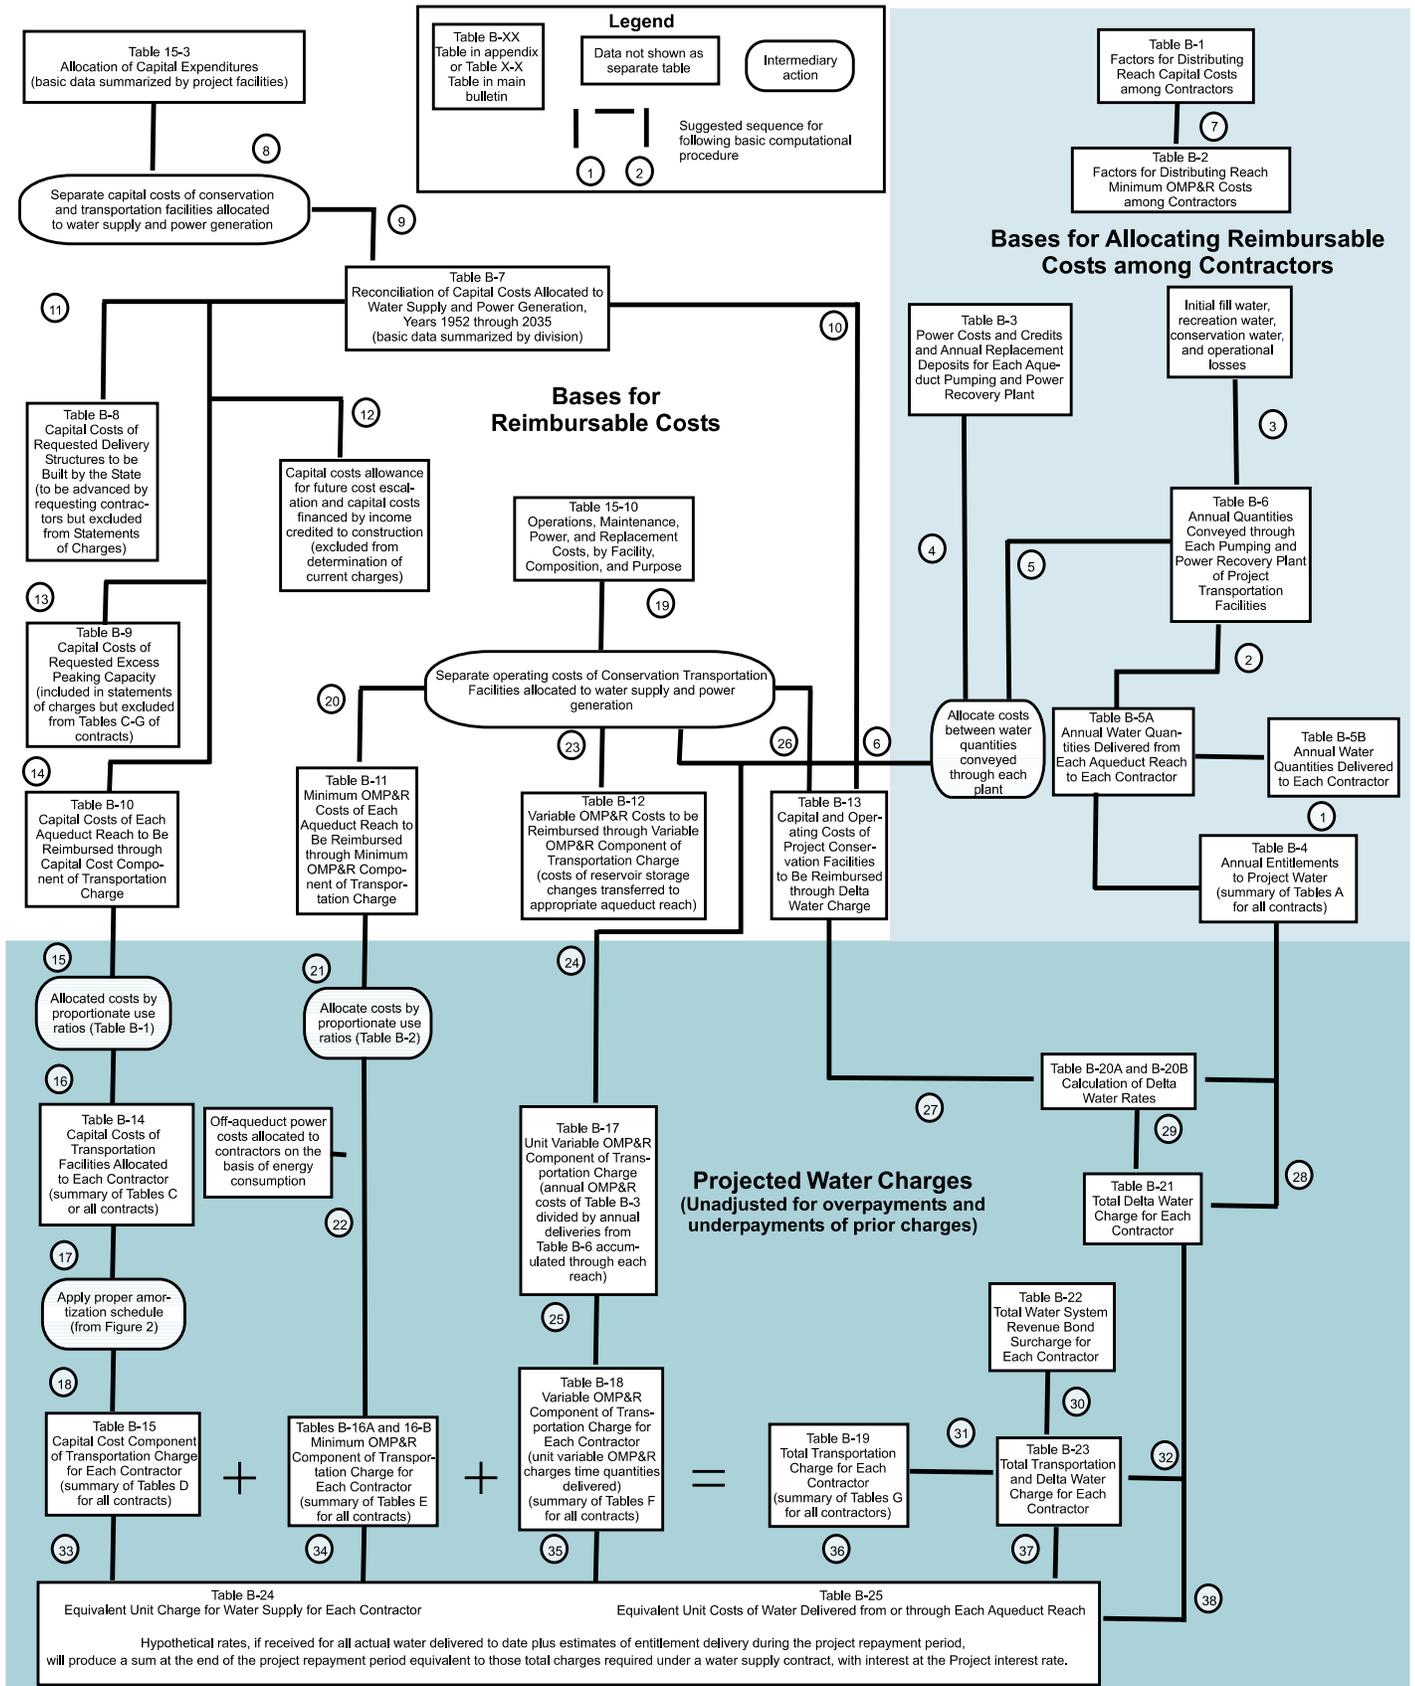

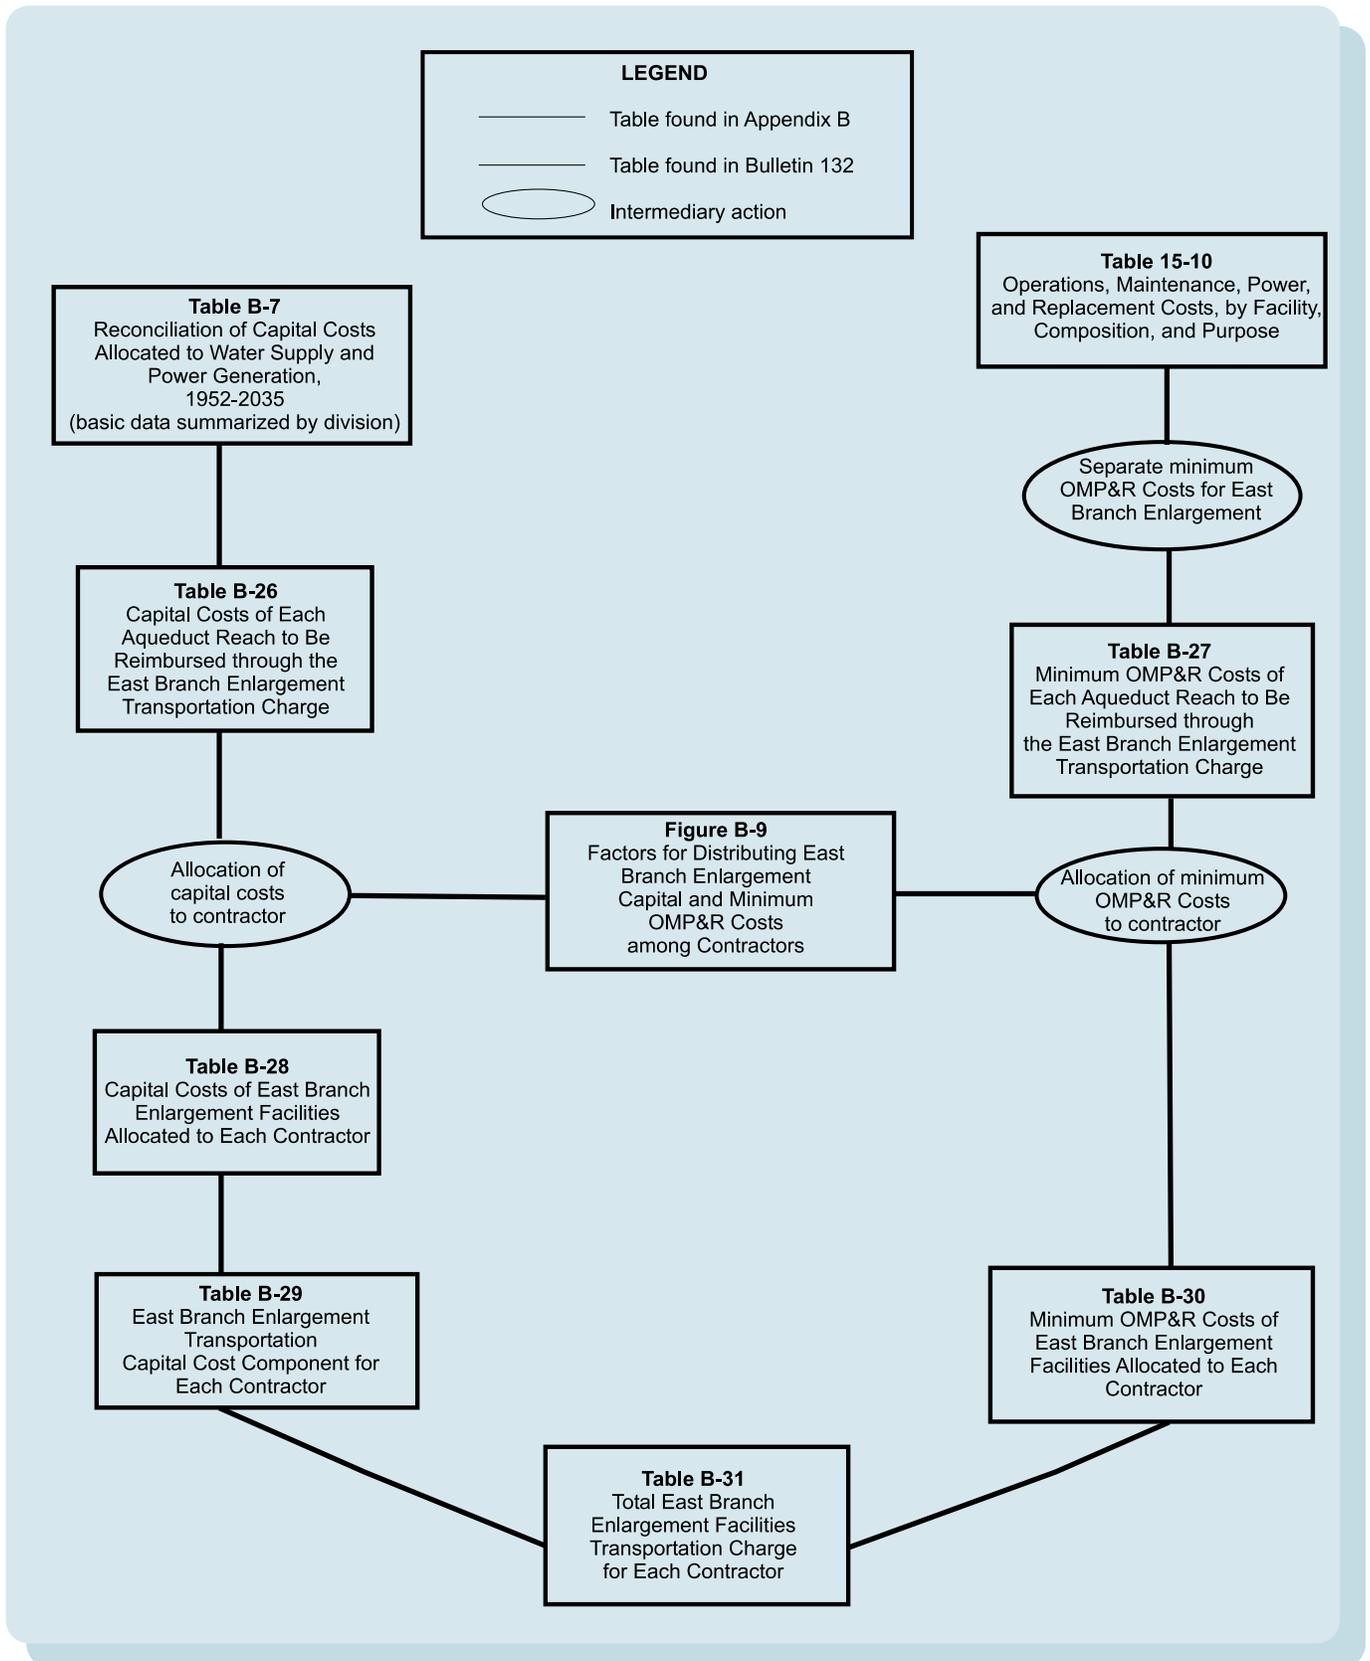

Figure B-2
Relationships of Data Used to Substantiate East Branch Enlargement Charges

outstanding reimbursable costs of the Project Conservation Facilities, with appropriate interest, by the end of the repayment period (2035).

The Transportation Charge is for use of facilities to transport water to the vicinity of each contractor's turnout. Generally, the annual charge represents each contractor's proportionate share of the reimbursable capital costs and operating costs of the Project Transportation Facilities.

Each contractor's allocated share of those reimbursable capital costs is amortized for repayment to the State; and certain variations are allowed in the amortization methods. Essentially, the contractors' shares of reimbursable operating costs are repaid in the year such costs are incurred by the State.

The East Branch Enlargement Transportation Charge is paid by the seven Southern California contractors participating in the enlargement. San Bernardino Valley Municipal Water District advanced funds to pay the district's allocated capital costs for the East Branch Enlargement. The remaining six contractors pay an allocated share of the debt service on revenue bonds sold to finance the enlargement. Each contractor also will pay an allocated share of the minimum operation, maintenance, power, and replacement (OMP&R) costs of the East Branch Enlargement.

Composition and Timing of Water Charges

As shown in Figure B-3, the Delta Water Charge and the Transportation Charge consist of the following three components:

1. Conservation and Transportation capital cost components, which will return to the State all reimbursable capital costs;
2. Conservation and Transportation minimum OMP&R components, which will return to the State all reimbursable operating costs that do not depend on or vary with quantities of water actually delivered to the contractors; and
3. A Transportation variable OMP&R component, which will return to the State all reimbursable operating costs that depend on, and vary with,

quantities of water actually delivered to the contractors.

The formula for computing the Delta Water Rate, Article 22(f) of the Standard Provisions for Water Supply Contract, was designed to ensure that all adjustments for prior overpayments or underpayments of the Delta Water Charge are accounted for in a redetermination of the rate. Since the redetermined rate applies to all future entitlements, such adjustments are amortized during the remainder of the project repayment period. This appendix includes a redetermination of the Delta Water Rate for 2000.

Article 28 of the standard provisions stipulates that Transportation Charges be redetermined each year. The tables in Appendix B include the numerical data used in this redetermination. Transportation Charges for prior years through 1999 included in those tables are the redetermined amounts and do not equal the amounts actually paid by contractors.

As provided under the Water System Revenue Bond Amendment to the water supply contracts, differences between actual payments under the Transportation capital cost component and amounts computed in this redetermination are accumulated with interest and amortized during the remaining years of the contract repayment period. All computations for adjustments are included in the attachments accompanying each contractor's Statement of Charges and are reflected in revised copies of Table C through Table G of the contract, which are also furnished to each long-term water supply contractor in the annual Statements of Charges.

These redeterminations exclude four charges associated with water service other than the Delta Water Charge and the Transportation Charge. The excluded charges (and the manner in which such excluded charges are treated in this appendix) are:

1. Advances of funds pursuant to Article 24(d) of the standard provisions for excess capacity constructed by the State at the request of contractors;
2. Advances of funds pursuant to Article 10(d) of the standard provisions for delivery structures (turnouts) constructed by the State at the request of contractors. Partial information concerning

Figure B-3
Composition of Delta Water Charge and Transportation Charge

Delta Water Charge*Capital Cost Component*

1. Planning, design, right-of-way, and construction costs of Conservation Facilities
2. Operations and maintenance costs for newly constructed Conservation Facilities prior to initial operations
3. Activation costs for newly constructed Conservation Facilities
4. Power costs allocated to initial filling of San Luis Reservoir
5. Capitalized O&M costs (major repair work and so forth) for Conservation Facilities.
6. Program costs (portion) to mitigate impacts on current Delta fishery population due to SWP pumping prior to 1986 (Department of Water Resources-Department of Fish and Game agreement)

Minimum OMP&R Component

1. Direct O&M costs of Conservation Facilities
 - a. Headquarters and field divisions (portion)
 - b. Insurance and FERC costs (portion)
2. General O&M costs allocated to Conservation Facilities
 - a. Contractor Accounting Office (portion)
 - b. Financial and contract administration (portion)
 - c. Water rights
 - d. Power planning for SWP facilities (portion)
3. Replacement deposits for SWP control centers (portion)
4. Credits for a portion of Hyatt-Thermalito power generation
5. Power costs and credits related to pumping water to San Luis Reservoir for project operations (storage changes)
6. Value of power used and generated by Gianelli Pumping-Generating Plant
7. Program costs (portion) to offset annual fish losses resulting from pumping at Banks Pumping Plant (Department of Water Resources-Department of Fish and Game agreement)

Transportation Charge*Capital Cost Component*

1. Planning, design, right-of-way, and construction costs of Transportation Facilities
2. O&M costs for newly constructed Transportation Facilities prior to initial operation
3. Activation costs for newly constructed Transportation Facilities
4. Power costs allocated to initial filling of Southern California reservoirs
5. Capitalized O&M costs (major repair work and so forth) for Transportation Facilities
6. Program costs (portion) to mitigate impacts on current Delta fishery population due to SWP pumping prior to 1986 (Department of Water Resources-Department of Fish and Game agreement)

Minimum OMP&R Component

1. Direct O&M costs of Transportation Facilities
 - a. Headquarters and field divisions (portion)
 - b. Insurance and FERC costs (portion)
2. General O&M costs related to Transportation Facilities
 - a. Contractor Accounting Office (portion)
 - b. Financial and contract administration (portion)
 - c. Power planning for SWP facilities (portion)
3. Power costs and credits related to pumping water to Southern California reservoirs for project operations (storage changes)
4. Power costs for pumping water to replenish losses from Transportation Facilities
5. Other power costs
 - a. Station service at Transportation Facility power and pumping plants
 - b. Transmission service costs related to "backbone" Transportation Facilities
6. Replacement deposits for SWP control centers (portion)
7. Off-Aqueduct Power Facility costs—bond service, bond cover costs (25 percent of bond service), bond reserves, transmission costs to provide service to "backbone," fuel costs taxes, and O&M-less power sales allocated to Off-Aqueduct Power Facilities
8. Program costs (portion) to offset annual fish losses resulting from pumping at Banks Pumping Plant (Department of Water Resources-Department of Fish and Game agreement)

Variable OMP&R Component

1. Power purchase costs
 - a. Capacity
 - b. Energy
 - c. Pine Flat bond service, O&M, and transmission costs allocated to aqueduct pumping plants
2. Alamo, Devil Canyon, Warne, and Castaic power generation credited at the powerplant reach and charged to aqueduct pumping plants
3. Hyatt-Thermalito Diversion Dam powerplant generation charged to aqueduct pumping plants (credits for this generation are reflected in the Delta Water Rate)
4. Replacement deposits for equipment at pumping plants and powerplants
5. Credits from sale of excess SWP system power
6. Program costs (portion) to offset annual fish losses resulting from pumping at Banks Pumping Plant (Department of Water Resources-Department of Fish and Game agreement)

Note: Excludes costs recovered under the East Branch Enlargement Transportation Charge.

actual and projected capital costs of such delivery structures is included in this appendix. Statements concerning these costs and data are furnished to the appropriate contractors at various times and are not part of the annual statements;

3. Payments for sale and service of surplus water to entities other than contractors, pursuant to Article 21 of the standard provisions, are also excluded. Those payments are generally based on the unit rates shown in Table B-25. Net revenues resulting from noncontractor service are applied as indicated on page 24 of Bulletin 132-71; and
4. Payments under the Devil Canyon-Castaic contract for costs of the Devil Canyon-Castaic facilities allocable to power generation. Charges billed as a result of the contract are billed separately from those billed as a result of the water supply contract. Information about the treatment of such charges in relation to redetermined Transportation Charges is included in special attachments to the bills of the six participating contractors.

The time and method of payment for corresponding components of the Delta Water Charge and the Transportation Charge are as follows:

1. The capital cost components of the Delta Water Charge and the Transportation Charge are paid in two semiannual installments, due January 1 and July 1 of each year, based on statements furnished by the State on or before July 1 of the preceding year;
2. The minimum OMP&R components of the Delta Water Charge and the Transportation Charge are paid in 12 equal installments, due the first of each month and based on statements furnished by the State on or before July 1 of the preceding year; and
3. The variable OMP&R component of the Transportation Charge is paid in varying monthly amounts and is due the fifteenth day of the second month following actual water delivery. The charges are projected based on a unit charge per acre-foot established on or before July 1 of the

preceding year. Those unit charges may be revised during the year to reflect current power costs and revenues. The unit charges are applied to actual monthly delivery quantities as determined by the State on or before the fifteenth day of the month following actual delivery.

Bases for Allocating Reimbursable Costs Among Contractors

This section describes the procedures for allocating reimbursable costs of Project Transportation Facilities among contractors (see upper right portion of Figure B-1). Those costs do not include annual costs of Off-Aqueduct Power Facilities, which are explained in the section "Project Water Charges."

Capital and Minimum OMP&R Costs

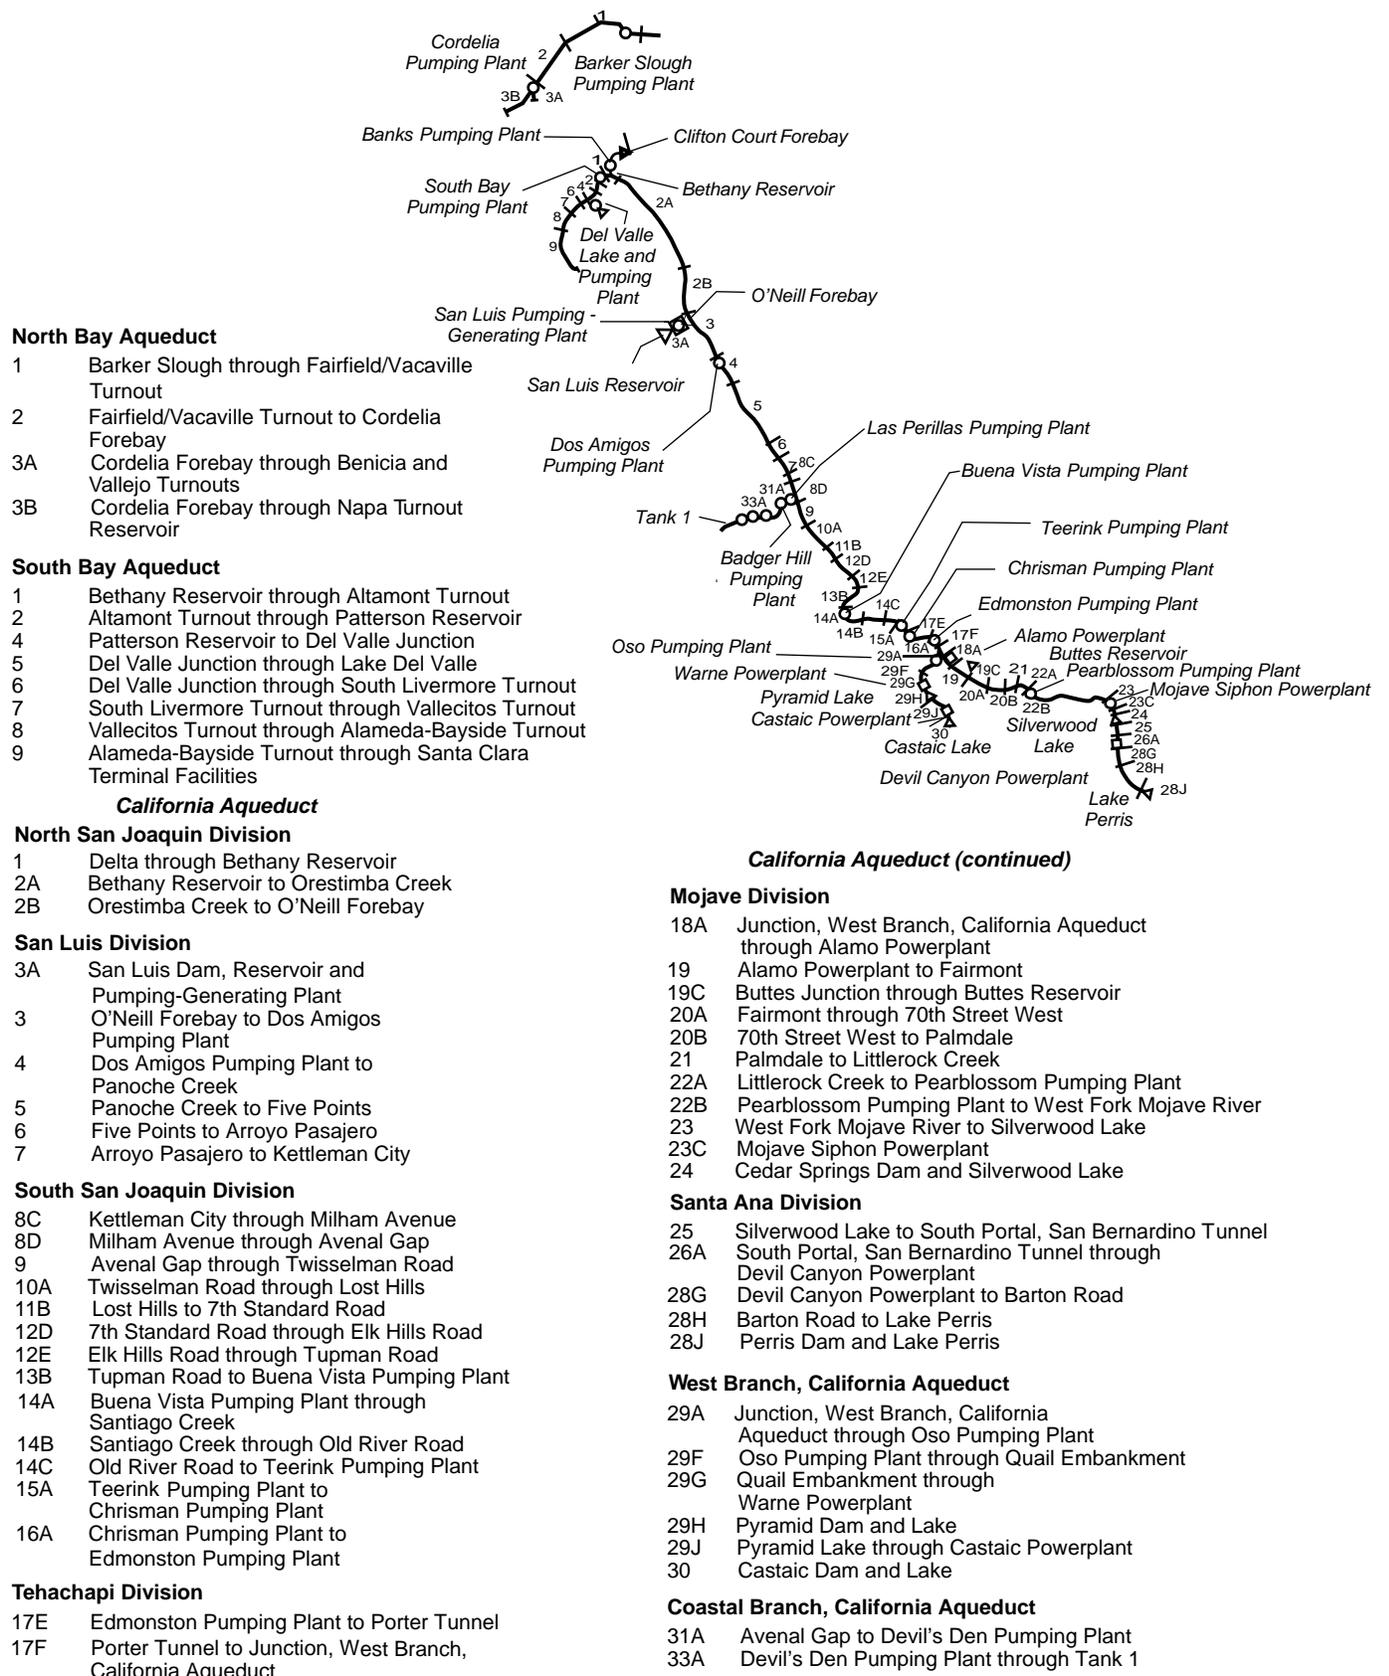

Figure B-4 includes information about the repayment reaches that form the basis for allocating reimbursable costs of the Project Transportation Facilities among contractors.

Allocations of reimbursable capital costs and minimum OMP&R costs of each reach are based on the proportionate maximum use of that reach by respective contractors under planned conditions of full development.

The derivation of ratios that represent the proportionate maximum use of each aqueduct reach by the respective contractors was first reported in Bulletin 132-70. The ratios in Bulletin 132-70 were subsequently revised for the North Bay Aqueduct, the South Bay Aqueduct, the California Aqueduct from the Delta to Castaic Lake, and the Coastal Branch.

All the revisions reported in previous bulletins regarding the derivation of ratios that represent the proportionate maximum use of each aqueduct reach by the respective contractors were last reported in Tables B-1 and B-2 of Bulletin 132-91. Beginning in 1998, the ratios for the California Aqueduct from the Delta to Silverwood Lake, plus Reach 31A, were revised to reflect the permanent transfer of 25,000 acre-feet from the Kern County Water Agency to the Mojave Water Agency. Beginning in the year 2000, the ratios for the California Aqueduct from the Delta to Castaic Lake were revised to reflect the permanent transfer of 41,000 acre-feet from Kern

**Figure B-4
Repayment Reaches and Descriptions**

County Water Agency to Castaic Lake Water Agency.

Table B-1 presents the reach ratios currently applicable to reimbursable capital costs.

Table B-2 presents corresponding ratios for allocating 2000 reimbursable minimum OMP&R costs among contractors. Requested excess capacity is omitted when deriving ratios applicable to capital costs because the capital costs for the excess capacity are paid on an incremental-cost basis and not a proportionate-use basis. However, requested excess capacity is accounted for in the ratios applicable to minimum OMP&R costs.

Variable OMP&R Costs

Article 26(a) includes provisions to ensure that the variable OMP&R component of the Transportation Charge will result in a return to the State of those costs that depend on and vary with the amount of SWP water deliveries. (The minimum OMP&R component results in a return of those operating costs that do not vary with deliveries.) Under Article 26(a) all such costs for a reach for a given year will be allocated among contractors in proportion to the actual annual use of that reach by the respective contractors.

Table B-3 summarizes the total power costs and credits for each aqueduct pumping and power recovery plant. Those variable costs consist of:

- Costs of capacity and energy used exclusive of associated power transmission and station service charges (transmission and station service costs are classified as minimum OMP&R costs);
- Credits for capacity and energy produced at aqueduct power recovery plants (treated as negative costs); and
- Payments for replacement of major plant machinery components having economic lives shorter than the project repayment period. In 1997, the Department discontinued charging for a sinking fund for replacements. Replacement costs for 1999 and thereafter are to be paid on an annual basis as the costs are incurred.

Table B-3 excludes plant capacity and energy costs associated with surplus and unscheduled water

service after May 1, 1973. Prior to that date, surplus water service was charged the same unit variable OMP&R component as entitlement water service. An amendment to the long-term water supply contracts in 1973 significantly changed the rate structure for surplus water service. Capacity and energy costs for pumping surplus and unscheduled water were allocated directly to those water contractors receiving surplus and unscheduled water service. A contract amendment in 1991 again revised the rate structure to provide for payment of costs through a melded power rate. These revisions to charges for surplus and unscheduled water are effective from the date of the amendments and are not applied to past charges.

An interruptible water program was established in 1994. This program is based on individual annual contracts; costs for interruptible water actually delivered are included in *Table B-3*.

Water Conveyance

The water conveyance quantities that form the basis for allocating costs are presented in *Tables B-4, B-5A, B-5B, and B-6*.

Table B-4 presents the schedules of annual entitlements as set forth in *Table A* and Article 6(a) of each water supply contract.

Table B-5A shows amounts of actual and projected entitlement water quantities delivered from each aqueduct reach to each contractor. Projected deliveries for years 1999 through 2035 are based on contractors' requests for future water deliveries. The quantities included in *Table B-5A* also include non-project water delivered to contractors and surplus water deliveries prior to May 1, 1973, and actual interruptible water deliveries in 1994 and after.

Table B-5B presents a summary of actual and projected annual entitlement water quantities delivered or to be delivered to each contractor. The quantities also include amounts of nonproject water and surplus water delivered prior to May 1, 1973, and actual deliveries of interruptible water in 1994 and after.

Table B-6 summarizes the annual entitlement water quantities conveyed or to be conveyed through each

aqueduct pumping plant or powerplant for each of the following functions:

- *Deliveries-Water Supply.* Water made available to contractors at down-aqueduct delivery structures, including certain hypothetical quantities to facilitate cost allocations, for those years when deliveries are made from net annual storage withdrawals. The net annual amounts of storage withdrawals are hypothetically added to the actual amounts conveyed from the Delta to the reservoirs, since deliveries made from storage withdrawals bear the same variable OMP&R costs per acre-foot as they would if the deliveries were actually conveyed from the Delta in that year. The hypothetical increases in the deliveries made from reservoir storage withdrawals are offset by equal credits to the minimum OMP&R costs of the respective reservoirs. Thus, the variable OMP&R components per acre-foot (Table B-17) may be applied to the total annual quantities delivered either from aqueduct reservoir storage or from the Delta.
- *Initial Fill Water.* Water required for initial filling of down-aqueduct reaches and reservoirs or for repayment of pre-consolidation water used during construction.
- *Deliveries-Recreation.* Water delivered to down-aqueduct recreation developments or used for fish and wildlife mitigation or enhancement.
- *Operational Losses.* Water lost through evaporation and seepage from all down-aqueduct reaches.
- *Reservoir Storage Changes.* Water placed in down-aqueduct reservoir storage after initial filling of the reservoirs, including projected net annual storage accretions (positive values) and withdrawals (negative values) for all down-aqueduct reservoirs of the Project Transportation Facilities.

Those variable OMP&R costs (Table B-12) that are allocable to storage accretions are assigned to the minimum OMP&R costs of the respective reservoirs. With the exception of Banks Pumping Plant, “Reservoir Storage Changes” also includes SWP water placed into Southern California groundwater storage from 1978 through 1982 (as positive amounts); and water withdrawn from storage and delivered to contractors in 1979, 1982, 1987, 1988, and 1989

(as negative amounts). At Banks Pumping Plant, groundwater additions and withdrawals are included in “Conservation Water.”

Table B-6 also summarizes the following two amounts under the heading “Conservation Water” (Column 25):

1. Net annual water amounts stored and projected to be stored in San Luis Reservoir; and
2. Water lost and projected to be lost through evaporation and seepage from San Luis Reservoir and from the water conservation portion of the California Aqueduct.

“Conservation Water” includes initial fill water, operational losses, and net annual storage changes associated with San Luis Reservoir and the portion of the California Aqueduct that is allocated to conservation. The same allocation procedure outlined above for Transportation Facilities also applies to water delivered from storage in Conservation Facilities, except that the hypothetical cost increases are added to the variable OMP&R cost to be reimbursed through the Transportation Charge and deducted from the minimum OMP&R costs to be reimbursed through the Delta Water Charge.

San Luis Reservoir is operated to conserve water for future delivery to downstream contractors. To account for costs associated with reservoir storage, those power and replacement costs of Banks Pumping Plant (a joint Transportation-Conservation Facility) that are allocated to the conveyance of annual conservation water quantities are transferred to the capital costs of San Luis Reservoir (during initial fill) or to the minimum OMP&R costs of San Luis Reservoir (subsequent to initial fill).

In years of net storage withdrawal from San Luis Reservoir, a portion of the minimum OMP&R cost of the reservoir is transferred to the variable OMP&R cost of Banks Pumping Plant. That transfer is equal to the variable OMP&R cost per acre-foot of delivery through Banks Pumping Plant for that year, multiplied by the acre-feet of deliveries derived from San Luis Reservoir storage for that year. Table B-6 also includes amounts of nonproject water and surplus

water delivered prior to May 1, 1973, and actual deliveries of interruptible water in 1994 and after.

Bases for Reimbursable Costs

This section describes the methods used to derive the costs allocated by the procedures outlined in the preceding section. A diagram of the cost derivation process is shown in the upper-left quadrant of Figure B-1.

First, the capital and minimum OMP&R costs of all SWP facilities are allocated among the various project purposes according to the allocation percentages in Table 1. Those percentages may be subject to revision in the future.

The redeterminations in this appendix involve only the SWP costs that are allocated to water supply and power generation.

Capital Costs

Capital costs used in the redeterminations in this appendix reflect prices prevailing on December 31, 1998; future cost escalation will be reflected in subsequent bulletins.

Table B-7 presents a reconciliation of estimated total capital costs of each Project Conservation Facility and each Project Transportation Facility. This table shows the relationship of Project Conservation and Transportation costs allocated to contractors (Tables B-8, B-9, B-10, and B-13) to the total SWP capital costs projected by the Department.

Table B-8 shows costs incurred and projected to be incurred by the State in connection with each contractor's turnouts. Costs incurred by the State for both State-constructed and contractor-constructed delivery structures are paid directly by the contractors for which the structures are built. (The State incurs design review and construction inspection costs in connection with contractor-constructed turnouts.)

Table B-9 lists costs and payments for excess capacity built into SWP Transportation Facilities according to amendments to contracts with Metropolitan Water District of Southern California, San Gabriel

Valley Municipal Water District, and Antelope Valley-East Kern Water Agency as follows:

1. Additional costs incurred by the State for requested excess capacity;
2. Advances by water contractors of funds for such costs; and
3. Credits for advances in excess of costs, which were applied to respective contractors' installments of the capital cost component of the Transportation Charge in 1981.

Under Amendment 2 of MWD's contract, 809 cfs of excess capacity was originally constructed in reaches of the West Branch at MWD's request. That capacity was reclassified as basic capacity of SWP Transportation Facilities under Amendment 7. MWD paid \$16.3 million as a prepayment of the capital cost component of the Transportation Charge in lieu of advancing funds for the original requested capacity.

Amendment 5 to MWD's contract requires that additional costs for modifications to the Santa Ana Pipeline (required for enlargement of Lake Perris) will be allocated to MWD and returned to the State through payments of the Transportation Charge. The additional costs to be repaid through MWD's capital cost component for the aqueduct reach from Devil Canyon Powerplant to Barton Road total about \$6.7 million (see Bulletin 132-72, page 98).

Table B-10 presents the actual and projected annual capital costs of each aqueduct reach that will eventually be returned to the State, with interest, through contractors payments of the capital cost component of the Transportation Charge and payment of debt service under the Devil Canyon-Castaic contracts.

Annual Operating Costs

Annual operating costs allocable to water supply and power generation are returned to the State through the minimum and variable OMP&R components of Delta Water and Transportation Charges and through a portion of the revenues from energy sales. All reimbursable operating costs of Conservation Facilities are included in the minimum OMP&R component of the Delta Water Charge.

**Table 1
Project Purpose Cost Allocation Factors
(Percentages)**

<i>Project Facilities</i>	<i>Water Supply and Power Generation</i>		<i>All Other Purposes (Nonreimbursable)</i>	
	<i>Capital Costs</i>	<i>Minimum OMP&R Costs</i>	<i>Capital Costs</i>	<i>Minimum OMP&R Costs</i>
Project Conservation Facilities				
Frenchman Dam and Lake	21.5	0.0	78.5	100.0
Antelope Dam and Lake	0.0	0.0	100.0	100.0
Grizzly Valley Dam and Lake Davis	1.0	1.8	99.0	98.2
Oroville Division ^a	97.1	99.5	2.9	0.5
California Aqueduct, Delta to Dos Amigos Pumping Plant	96.6	96.7	3.4	3.3
Delta Facilities	86.0	86.0	14.0	14.0
Transportation Facilities				
Grizzly Valley Pipeline	100.0	100.0	0.0	0.0
North Bay Aqueduct	100.0	100.0	0.0	0.0
South Bay Aqueduct				
Del Valle Dam and Lake Del Valle	25.2	22.0	74.8 ^b	78.0 ^c
Remainder of South Bay Aqueduct	100.0	100.0	0.0	0.0
California Aqueduct				
Delta to Dos Amigos Pumping Plant	96.6	96.7	3.4	3.3
Dos Amigos Pumping Plant to termini (excluding Coastal Branch)	94.3	96.9	5.7	3.1
Coastal Branch	100.0	100.0	0.0	0.0
^a Percentages indicated are applicable to the remaining costs of division after excluding costs allocated to flood control that are reimbursed by the federal government (22 percent of capital costs) and excluding specific power costs of Hyatt and Thermalito powerplants and switchyards. ^b Percentage indicated consists of 48.8 percent of costs allocated to recreation and 26.8 percent to flood control. ^c Percentage indicated consists of 44.9 percent of costs allocated to recreation and 33.1 percent to flood control.				

Transportation and Devil Canyon-Castaic Contract Costs

Table B-11 shows the amounts of the actual and projected costs to be reimbursed through payments of the minimum OMP&R component of the Transportation Charge and allocated operating costs under the Devil Canyon-Castaic contract. The table includes the following seven types of operating costs incurred annually that do not vary with water quantities delivered to the contractors:

1. All direct labor charges for field operation and maintenance personnel, including associated indirect costs;
2. A distributed share of general operating costs that cannot be identified solely with one facility or aqueduct reach;
3. Electric power transmission and station service costs allocable to aqueduct pumping and power recovery plants;
4. All costs for equipment, materials, and supplies;
5. Portions of the power and replacement costs of all up-aqueduct pumping plants and powerplants that are allocable to the annual conveyance of water lost to evaporation and seepage from

respective aqueduct reaches or placed into storage in respective reservoirs of the Project Transportation Facilities (after initial fill);

6. Credits, which offset those costs in (5) above, for deliveries drawn from reservoir storage; and
7. Escalation of projected operating costs at 5 percent per year for 1999, 2000, and 2001.

Table B-12 shows the portions of variable OMP&R costs in *Table B-3* that are allocable to the water supply delivery quantities included in *Table B-6* and reimbursed through payments of the variable OMP&R component of the Transportation Charge.

The following five adjustments are made to the *Table B-3* costs to derive the *Table B-12* costs:

1. Part of the variable OMP&R costs of each plant is allocated to recreation. The allocation to recreation is in proportion to the quantity of water conveyed through each plant each year for delivery to onshore recreational developments.
2. That portion of variable plant costs attributable to the initial fill of aqueduct reaches is allocated to the joint capital costs of respective down-aqueduct reaches and reservoirs.
3. That portion of costs attributable to evaporation and seepage is allocated to the joint minimum OMP&R costs of respective down-aqueduct reaches and reservoirs.
4. Adjustments are made for additions or withdrawals from storage in aqueduct reservoirs. In years when water is added to storage in aqueduct reservoirs, the cost of conveying this water into storage is charged to the minimum OMP&R costs of the corresponding reservoir. In years when storage in aqueduct reservoirs is decreased for the purpose of making deliveries, a credit is applied to the minimum OMP&R costs of the reservoir from which the storage is released. This credit is equal to the number of acre-feet of storage reduction times the variable OMP&R unit rate for the year storage is released. The unit rate is equal to the variable OMP&R unit rate for the year the water is taken from storage.

5. That portion of costs attributable to pumping water to replace evaporation and seepage losses and for additions or withdrawals from storage in San Luis Reservoir is charged to the minimum OMP&R component of the Delta Water Rate.

The remaining costs are allocated to Transportation water supply and repaid by the contractors.

Conservation Capital and Operating Costs

Table B-13 is a summary of actual and projected capital and operating costs of the initial Project Conservation Facilities. These costs are reimbursed through payments by contractors under the Delta Water Charge, Oroville power sales, and Gianelli Generating Plant credits. *Table B-13* also shows credits applied to the reimbursable capital costs of the Project Conservation Facilities according to negotiated settlements concerning incurred planning costs for the period from 1952 through 1978.

Project Water Charges

This section describes the redetermination of past and projected components of the Transportation Charge for annual revision of *Tables C* through *G* of each water supply contract. This section also describes the derivation of the unit Delta Water Rates and the Water System Revenue Bond Surcharge.

A summary of equivalent unit charges for each acre-foot of entitlement water service is also included for each contractor and each aqueduct reach. A diagram of all calculations may be found in the lower half of *Figure B-1*.

Transportation Charges

The accumulation of allocated costs of each aqueduct reach to each contractor is the basis for the Transportation Charge components.

Table B-14 summarizes each contractor's share of the capital costs of aqueduct reaches presented in *Table B-10*. Those amounts are determined by applying proportionate-use ratios set forth in *Table B-1* to the costs in *Table B-10*. The resulting allocated costs are set forth in *Table C* of the respective water supply contracts.

Prepayments of the capital cost component, required under MWD’s Amendment 7, are included as negative capital costs in Table B-14 and Table C of MWD’s Statement of Charges for 1999. Solano County Water Agency, Empire West Side Irrigation District, and Castaic Lake Water Agency also prepaid capital costs (see Table B-14 footnotes). Table B-14 includes the costs of the planned East Branch Extension to provide water service to San Bernardino Valley Municipal Water District and San Geronio Pass Water Agency.

Both Table B-14 and Table C of the six contracts for project water service below Devil Canyon Powerplant and Castaic Powerplant include the capital costs reimbursable under the Devil Canyon-Castaic contract.

Table B-15 summarizes capital cost components of the Transportation Charge for each contractor for each year of the project repayment period. By the year 2035, the capital cost components shown in Table B-15 will recover the costs shown in Table B-14, with interest at the project Interest Rate of 4.615 percent per annum and based on the amortization schedules included in Table 2.

Those estimated components, subsequently adjusted for prior overpayments or underpayments, are included in Table D of the water supply contracts. Costs of excess capacity are billed separately and are not included in Table B-15.

Table B-15 includes the debt service payments due from the six contractors down-aqueduct from Devil Canyon Powerplant and Castaic Powerplant according to terms of the Devil Canyon-Castaic contract.

Table B-16A summarizes the minimum OMP&R components of the Transportation Charge for each year of the project repayment period. Those estimated components, subsequently adjusted for prior overpayments or underpayments, are included in Table E of the respective contracts.

The total amounts included in Table B-16A are determined by applying the proportionate-use ratios in Table B-2 to the reach costs in Table B-11. Table B-16A excludes charges for Off-Aqueduct Power Facilities, which are included separately in Table B-16B. Both Table B-16A and Table E for the

Table 2
Criteria for Amortizing Capital Costs of Transportation Facilities

^a Allocated capital costs of transportation facilities amortized in equal annual installments unless otherwise noted.

^b Principal payments on each annual capital cost prior to 1971 delayed until calendar year 1972, except payments for 1963.

^c For Yuba City and Butte County payments for Delta Water Charge only.

^d Payment deferred for 1963 and added to 1964 payment with accrued interest.

^e For Dudley Ridge Water District, Empire West Side Irrigation District, Kern County Water Agency (agricultural use), Oak Flat Water District, and Tulare Lake Basin Water Conservation District, according to Article 45 of the contracts for supply of agricultural water, capital costs of transportation facilities allocated to agricultural water supply are amortized by using an equivalent unit rate per acre-foot applied to the annual entitlements (Table B-4) through the project repayment period.

^f For San Luis Obispo Flood Control and Water Conservation District and Santa Barbara County Flood Control and Water Conservation District, all principal and interest payments for costs of the Coastal Stub were deferred until 1976.

six contractors down-aqueduct from Devil Canyon Powerplant and Castaic Powerplant include the portion of operating costs payable under the Devil Canyon-Castaic contract.

Prior to 1997, as part of operating agreements with the Department, Kern County Water Agency was

billed for any additional operating costs caused by early installation of units in Las Perillas and Badger Hill Pumping Plants by Berrenda Mesa Water Storage District (see Bulletin 132-71, page 7). Under those agreements, a portion of minimum OMP&R costs of Reach 31A were assigned directly to KCWA, with the remaining reach costs allocated by application of the proportionate-use ratios shown in Table 3. The Department purchased Unit No. 6 at Las Perillas and Badger Hill pumping plants in early 1997 to provide pumping capacity for deliveries to Coastal Area contractors which began in 1997.

Table 3
Minimum OMP&R Costs of Reach 31A
Assigned Directly to Kern County
Water Agency

<i>Year</i>	<i>Direct Charges</i>
1969	46,511
1970	46,302
1971	140,074

1991	139,527
1992	185,370
1993	219,344
1994	364,196
1995	272,341
1996	322,123
Total	3,997,767

Table B16-B summarizes the annual charges for Off-Aqueduct Power Facilities allocated to each water contractor, adjusted for prior overpayments or underpayments of charges. Those charges are to repay all Off-Aqueduct Power costs, including bond service,

deposits for reserves, operation and maintenance costs, fuel costs, taxes, and insurance.

Adopted October 1, 1979, the General Bond Resolution requires that sufficient revenues be collected each year to repay all of those costs. In addition, an amount totaling 25 percent of the annual bond service is collected each year to ensure that sufficient funds are available to cover all annual costs. Any revenues collected and not needed during the year are refunded to the contractors in the next year.

Table 4 summarizes Off-Aqueduct Power Facility charges and credits related to deliveries for 1998.

Table 4
Summary of Off-Aqueduct Power Facility
Charges and Credits

<i>1998 Charges</i>	
Reid Gardner Powerplant	\$71,767,483
Bottle Rock Powerplant	\$15,220,345
South Geysers Powerplant	\$7,056,973
<i>Subtotal</i>	<i>\$94,044,801</i>
<i>1998 Credits</i>	
Power sales	\$15,663,977
Miscellaneous water	
Alameda County - Zone 7	\$132,585
<i>Subtotal</i>	<i>\$15,796,562</i>
Grand Total	\$78,248,239

Table 5 shows projected charges for Off-Aqueduct Power Facilities and an amount equal to 25 percent of annual bond service for 1999 and each year thereafter.

The annual charges for Off-Aqueduct Power Facilities are allocated among contractors in proportion to the electrical energy required to pump entitlement water for the year. The initial allocation for the State-ments of Charges is based on estimates of energy to pump requested entitlement water deliveries.

An interim adjustment in the allocation of Off-Aqueduct Power costs may be made in May of each year based on updated cost estimates and April revisions

**Table 5
Projected Charges for Off-Aqueduct Power Facilities**

Year	Total Annual Cost	25% Bond Service
1999	98,917,565	9,519,689

Bluestone	705	2,121
Polonio Pass	705	2,826

^a Includes transmission losses

upstream from the delivery turnouts. The amounts include transmission losses.

Table B-17 presents a summary of actual and projected total variable OMP&R costs for each acre-foot of water conveyed through each aqueduct pumping plant and powerplant for each year of the project repayment period. Those data are derived according to the following procedure specified in Article 26(a) of the Standard Provisions for calculating the variable OMP&R component of the Transportation Charge:

- An annual charge per acre-foot of projected water deliveries to all contractors served from or through each reach is determined so the projected variable OMP&R costs to be incurred for each reach will be returned to the State.
- The total annual variable OMP&R component for any contractor for a given reach is obtained by multiplying the unit charge associated with

that reach by the quantity of water actually delivered from or through the reach to the contractor.

The data summarized in Table B-17 are derived by dividing the costs shown in Table B-3 by the quantities of water shown in Table B-6. However, certain costs included in Table B-3 for extra peaking service, which would otherwise constitute variable OMP&R costs, are assigned directly to contractors requesting this type of service (see Bulletin 132-71, page 21, and Water Service Contractors Council Memo No. 593, July 10, 1970). Those costs are excluded from the unit charges shown in Table B-17. Peaking charges based on additional capacity ceased in 1983. Since 1984, costs are based on market energy rates. The amounts of extra peaking charges for additional power costs are shown in Table 7 and Table 8.

The unit rates shown in Table B-17 constitute the rates for the pumping plants and powerplants listed. The cumulative rates constitute the total rates, cumulative from the Sacramento-San Joaquin Delta, and are applicable to deliveries from or downstream of the pumping plants and powerplants. Extra peaking service costs are excluded.

Table B-18 shows the variable OMP&R components of the Transportation Charge for each contractor for each year of the project repayment period. Table B-18 is developed from the costs per acre-foot included in Table B-17 and the delivery quantities for each contractor from each reach as indicated in Table B-5A, plus any costs for extra peaking service. Those estimated components, subsequently adjusted for prior overpayments or underpayments, are included in Table F of the respective water supply contracts.

Table B-19 summarizes the annual Transportation Charges for each contractor (the sums of the corresponding amounts included in Tables B-15, B-16A, B-16B, and B-18). Those estimated payments, subsequently adjusted for prior overpayments or underpayments, are set forth in Table G of the respective water supply contracts.

Both Table B-19 and Table G for the six contractors down-aqueduct from Devil Canyon Powerplant and Castaic Powerplant include amounts of debt service

and operating cost payments due according to provisions of the Devil Canyon-Castaic contract.

Delta Water Charges

Table B-20A presents the calculation of the Delta Water Rate for the initial Conservation Facilities applicable in 2000 according to the amended Articles 22(e) and 22(g) of all 29 contracts. The Delta Water Rate was calculated at a Project Interest Rate of 4.615 percent based on Conservation Facility costs shown in Table B-13. That Delta Water Rate is used to compute projected Delta Water Charges under Article 53(i) for the contractors who have executed the Monterey Amendment. Included in Table B-20A is the Delta Water Rate for the two contractors who have not executed the Monterey Amendment (Plumas County and Empire).

Table B-20B shows each component of the 2000 Delta Water Rate from Table B-20A.

Table B-21 summarizes the annual Delta Water Charge for each contractor. The projected charges in Table B-21 are developed by multiplying the total rate per acre-foot, as shown in Table B-20A, by the amount of entitlement water for each contractor as shown in Table B-4.

Water System Revenue Bond Surcharge

Table B-22 summarizes the Water System Revenue Bond Surcharge to the Delta Water Charge and the Transportation capital cost component of each contractor. The surcharge shown in Table B-22 includes the financing costs of WSRB Series B through V. This surcharge is levied according to an amendment to the water supply contracts for repaying Water System Revenue Bond financing costs. All long-term water supply contractors signed that amendment.

Total Water Charges

Table B-23 summarizes the total annual charges to each contractor (the sum of the Transportation Charge in Table B-19, the Delta Water Charge in Table B-21, and the Water System Revenue Bond Surcharge in Table B-22). The charges do not reflect past payments by contractors and are unadjusted for prior overpayments or underpayments.

Equivalent Total Water Charges

Table B-24 presents the Transportation Charge and Delta Water Charge in terms of the equivalent unit charge for each acre-foot of entitlement water now projected for delivery to the respective contractors.

These equivalent charges would provide the same principal sum at the end of the project repayment period as annual payments to be made as part of the Delta Water Charge and Transportation Charge, plus interest at the Project Interest Rate, if applied to each acre-foot of entitlement water delivered to date; all surplus water delivered prior to May 1, 1973; all interruptible water deliveries in 1994 and after; and all entitlement water now projected to be delivered during the remainder of the project repayment period (*Table B-5B*).

The equivalent unit Delta Water Charges included in *Table B-24* are greater than those in *Table B-20A* because current projections of entitlement water service are less for most contractors than the amounts shown in *Table A*.

Equivalent Water Costs by Reach

Table B-25 presents a summary of the equivalent unit Transportation cost of conveying entitlement water through respective aqueduct reaches of the Project Transportation Facilities.

Those unit costs provide the basis of charges assessed for extra service (such as for delivery of entitlements down-aqueduct from a contractor's turnout) and for wheeling service to entities other than the long-term water supply contractors.

The cumulative unit conveyance costs indicated for reaches in *Table B-25* do not necessarily equal the equivalent unit Transportation Charges to contractors served from such reaches. The unit charges in *Table B-24* account for the rate of water demand buildup and cost allocation factors of the individual contractors; however, the unit costs included in *Table B-25* reflect the effect of melding the respective buildups and allocation criteria of all contractors whose entitlements are conveyed through a given reach. *Table B-25* also includes surplus water

delivered prior to May 1, 1973, and interruptible water deliveries in 1994 and after.

East Branch Enlargement Facility Charges

Table B-26 reflects the Department's projection of annual capital costs of the East Branch Enlargement Facilities for each aqueduct reach. Those projections will be redetermined in future bulletins to include:

- A reallocation of costs of constructing the present East Branch facilities between Alamo Powerplant and Silverwood Lake;
- A reallocation of costs of Silverwood Lake to reflect additional use as a result of East Branch Enlargement operation;
- Reallocation of costs of San Bernardino Tunnel to reflect redistribution of flow capacities necessary for the East Branch Enlargement Facilities; and
- Actual construction costs of the enlargement.

These costs will be recovered with interest from the seven Southern California water contractors participating in the enlargement, according to their amended water supply contracts (see *Table 9*).

Table B-27 lists the projected minimum OMP&R costs for each reach of the enlargement to be repaid by the seven contractors participating in the East Branch Enlargement. Currently, this table includes only the amounts of estimated incremental minimum OMP&R costs attributable to the East Branch Enlargement. According to Article 49 (e)(1), the contractors participating in the East Branch Enlargement will also share in the remaining minimum OMP&R costs of the affected reaches according to a formula to be developed by the Department in consultation with the affected contractors. Once the formula is developed, subsequent versions of this table will reflect the transfer of a share of the minimum OMP&R costs now included in *Table B-11*.

Table B-28 shows each participating contractor's share of the estimated capital costs of the East Branch Enlargement shown in *Table B-26*.

Table B-29 shows the amounts of the annual capital cost components of the East Branch Enlargement

Transportation Charge for each participating contractor. This component consists of each contractor's allocated share of debt service on bonds sold to finance the enlargement.

Table B-30 shows the minimum OMP&R components of the East Branch Enlargement Transportation Charge for each participating contractor for each year of the project repayment period. The amounts shown in *Table B-30* will recover the minimum OMP&R costs shown in *Table B-27*.

Table B-31 shows the annual East Branch Enlargement Transportation charges for each participating contractor (the sums of the corresponding amounts included in *Tables B-29* and *B-30*).

Short-Term Agreements

The long-term water supply contractors and the Department have executed a short-term agreement that affects the contractors' charges. A 5-year agreement was executed in late 1997 between the Department and 16 Municipal and Industrial contractors, who agreed to pay their allocated shares of Municipal Water Quality Investigations costs. The MWQI charges under this agreement are included in the Transportation minimum OMP&R components shown in *Table B-16A*.

Nine contractors have executed short-term agreements to participate in the feasibility study for the American Basin conjunctive use program. The costs of the feasibility study are included in *Table B-16A*.

a) Power costs for the period 1968 through 1987 are for an interim facility.
 b) The costs of Del Valle Pumping Plant are combined with those of South Bay Pumping Plant to simplify the cost allocations.

Table B-3
Power Costs and Credits and Annual Replacement Deposits for Each
Aqueduct Pumping and Power Recovery Plant
(Dollars)

d) In accordance with the Exchange Agreement between the noted agencies, MWDSC assumed responsibility for payment of variable OMP&R costs on the exchange water in reaches beyond Reach 22B, and Desert Water Agency and Coachella Valley Water District for such costs from the Delta through Reach 22B. The adjustment in deliveries in Reach 22B provides for compliance with provisions for the repayment of costs under the agreement. In 1993 and after the exchange takes place in Reach 26A.

e) 1988 advance entitlement.

f) In accordance with the Exchange Agreement between the noted agencies, MWDSC assumed responsibility for payment of variable OMP&R costs on the exchange water in reaches beyond Reach 22B, and Desert Water Agency and Coachella Valley Water District for such costs from the Delta through Reach 22B.

The adjustment in deliveries in Reach 22B provides for compliance with provisions for the repayment of costs under the agreement. In 1993 and after the exchange takes place in Reach 26A.

a) Miscellaneous project receipts that are applied for accounting purposes to reduce the capital costs of the particular facilities.

b) These allowances are included for planning the future financial program, but not for determining current water charges.

The costs shown in this appendix are based on prices prevailing on December 31, 1998.

c) See Table B-8.

d) See Table B-9.

e) See Table B-13. A portion of these costs will be offset by power generation sales and credits. Planning and Preoperations line item includes \$50,534.00 of planning costs financed from Systems Revenues and not included in Table 14-3. Oroville Division total reduced by \$14,095,000 for costs included under Small Hydro.

f) See Table B-10. Mojave division total reduced by \$76,069,000 for costs included under Small Hydro.

- a) Overpayment or underpayment for each calendar year - column (1) minus column (2).
b) Interest rates shown are annual rates. Interest is credited daily at applicable rates on funds deposited in the State's Surplus Money Investment Fund.
c) Amounts shown are end-of-year balances. Interest on overpayments is credited at applicable Surplus Money Investment Fund Interest Rates shown in columns (4) and (5). Interest on underpayments is charged at the 1980 Project Interest Rate of 4.584 percent.

d) Actual payments are shown for 1965 through 1976, with 1981 adjusted to reflect overpayments and underpayments without interest for prior years.
e) Interest for overpayments and underpayments under provisions of Amendment 2 of the contract.
f) Actual payments are shown for 1965 through 1973, with 1974 adjusted to reflect overpayments and underpayments without interest for prior years.
g) Interest for overpayments and underpayments under provisions of Amendment 5 of the contract.
h) Amounts in excess of incremental costs, under the provisions of the contract, reduce the Transportation Charge capital cost component of the Agency's Statement of Charges for January 1981.

a) Includes extra peaking costs assigned directly to contractors. Refer to Appendix B text discussion of Table B-17 under "Project Water Charges."

b) Costs for the period 1968 through 1987 are for an interim facility.

c) The relatively minor costs of Del Valle Pumping Plant have been combined with those of South Bay Pumping Plant to simplify the allocation procedures.

Table B-12

Variable OMP&R Costs to Be Reimbursed through Variable OMP&R Component of Transportation Charge (a)

(Dollars)

d) These values represent a proportionate allocation of the total variable OMP&R costs of pumping and recovery plants (Table B-3) associated with net annual withdrawals from storage for Project Transportation Facilities. The allocation is determined annually by applying the following ratio, calculated from the data shown in Table B-6: "Reservoir Storage Changes" (withdrawals, as a positive value) conveyed through each plant, divided by "Total" annual quantity conveyed through each plant, in acre-feet. The costs so determined are accumulated for all upstream plants for each year, for each respective reservoir.

Table B-12

**Variable OMP&R Costs to Be Reimbursed through Variable OMP&R
Component of Transportation Charge (a)**
(Dollars)

- a) Reimbursed through the capital cost component of the Delta Water Charge.
b) Negotiated settlements as to the magnitude of SWP planning costs from 1952 through 1978.
c) Reimbursed through the minimum OMP&R component of the Delta Water Charge. Credits for Gianelli power generation are reflected in these net costs.
d) Revenues credited through the capital cost component of the Delta Water Charge.
e) Revenues credited through the minimum OMP&R component of the Delta Water Charge.
f) Under amendments of Articles 22(e) and 22(g), planning and pre-operating costs of additional Project Conservation Facilities incurred through the previous year (1998) are reflected in the Delta Water Charge.

a) For the period 1968 through 1987, rates are for an interim facility.

b) The relatively minor costs of Del Valle Pumping Plant have been combined with those of South Bay Pumping Plant to simplify the allocation procedure.

Table B-20A
Calculation of Delta Water Rates

Calculation in accordance with Article 53(i) of the Monterey Amendment

(Values in millions of dollars [\$] or millions of acre-feet [AF] discounted to 1999 at 4.615 percent per annum)

<i>Procedure</i>	<i>Capital Cost Component (1)</i>		<i>Minimum Operation Maintenance, Power and Replacement Component (a (2)</i>		<i>Total Delta Water Rate (3)</i>	
Commencing in 2000 Total Costs of "Initial" Project Conservation Facilities to be Reimbursed and Project Water Entitlements during the Project Repayment Period.	\$3,466.06 b)	216.85 AF	\$2,161.58 c)	218.85 AF	\$5,627.64	216.85 AF
Less, Project Power Revenues to be Realized During the Project Repayment Period.	(1,264.18)		(395.65)		(1,659.83)	
Less, Delta Water Charges Paid and Project Water Entitlements, Prior to 2000	(1,349.17) d)	(144.44) AF	(884.72)	(144.44) AF	(2,233.89)	(144.44) AF
Total	\$852.71	72.41 AF	\$881.21	72.41 AF	\$1,733.92	72.41 AF
Rate Applicable in 2000	\$11.78	per acre-foot	\$12.17	per acre-foot	\$23.95	per acre-foot

Calculation under original provisions, without the Monterey Amendment
(for Plumas County and Empire)

<i>Procedure</i>	<i>Capital Cost Component (1)</i>		<i>Minimum Operation Maintenance, Power and Replacement Component (a (2)</i>		<i>Total Delta Water Rate (3)</i>	
Commencing in 2000 Total Costs of "Initial" Project Conservation Facilities to be Reimbursed and Project Water Entitlements during the Project Repayment Period.	\$3,457.86 b)	216.85	\$2,148.11 c)	216.85	\$5,605.97	216.85
Less, Project Power Revenues to be Realized During the Project Repayment Period.	(1,264.18)		(395.65)		(1,659.83)	
Less, Delta Water Charges Paid and Project Water Entitlements, Prior to 2000	(1,349.17) d)	(144.44) AF	(884.72)	(144.44) AF	(2,233.89)	(144.44) AF
Total	\$844.51	72.41 AF	\$867.74	72.41 AF	\$1,712.25	72.41 AF
Rate Applicable in 2000	\$11.66	per acre-foot	\$11.72	per acre-foot	\$23.64	per acre-foot

a) Considering that all operating costs of Project Conservation Facilities will not vary with annual amounts of Project water delivered, and therefore are properly classified as "Minimum" OMP&R Costs.

b) Including net credits of \$4,850,000 for settlements as to the magnitude of Project Capital costs incurred prior to December 31, 1960, and net credits of \$6,678,320 for settlement as to the magnitude of Project Capital costs incurred during the 1961 through 1978 period.

c) Includes conservation power costs and credits at San Luis.

d) Applying all Delta Water Charges paid prior to 1970 to reimburse Capital costs (the charge was not divided into components until 1970).

Table B-20B
Delta Water Rates by Facility
(Dollars per Acre-Foot)

<i>Item</i>	<i>Capital Cost Component (1)</i>	<i>Minimum Operation, Maintenance, Power and Replacement Component (2)</i>	<i>Total Delta Water Rate (3)</i>
Initial Conservation Facilities			
Oroville Division			
Water Supply and Power Costs (a)	29.05	15.17	44.22
Less, Oroville Power Revenues	-17.46	-5.46	-22.92
<i>Subtotal</i>	11.59	9.71	21.30
Delta Facilities (b)	8.27	7.41	15.68
California Aqueduct, portion			
Reach 1	1.87	2.81	4.68
Reach 2A	1.11	0.52	1.63
Reach 2B	0.56	0.26	0.82
Reach 3	0.40	0.16	0.56
<i>Subtotal</i>	3.94	3.75	7.69
San Luis Facilities	5.61	3.38	8.99
Planning and preoperating costs through 1998	1.68	0.00	1.68
45,000 AF relinquished costs	0.11	0.14	0.25
Less, Capital Cost Credits	-0.79	0.00	-0.79
Less, Delta Water Charges paid prior to 2000	-18.63	-12.22	-30.85
Rate applicable in 2000	11.78	12.17	23.95

a) Includes revenue received from non-contractors.

b) Includes (1) Delta Facility planning costs, (2) Delta Studies costs, and (3) Suisun Marsh Facilities Costs.

a) Representative of transportation unit costs only; does not include a unit cost of conservation. The Delta Water Rate should be added to these values in order to approximate unit costs at canal-side. Includes surplus water prior to May 1, 1973.
b) Hypothetical charges which, if assessed on all entitlement water delivered to date, all surplus water delivered prior to May 1, 1973, and all entitlement water now estimated to be delivered during the remainder of the Project repayment period (Table B-5B), would provide a sum at the end of the period financially equivalent to all Transportation Charges required under the water supply contract considering interest rate at the Project Interest Rate of 4.615 percent per annum.
c) The Water System Revenue Bond Surcharge equivalent unit rate is calculated by dividing the WSRB surcharge for 2000 (from 132-99, Table B-22) by the total Transportation Capital (132-99, B-15) and the Capital component of the Delta Water Charge (132-99, B-4 * 11.77671248). This rate is multiplied by the equivalent rate for the Transportation Capital cost (column 1).

a) Presently, this table shows only the estimated incremental minimum OMP&R costs attributable to East Branch Enlargement. Under Article 49(e)(1), the contractors participating in the East Branch Enlargement will also share in the remaining minimum OMP&R costs of the affected reaches according to a formula to be developed by the Department in consultation with the affected contractors. Once the formula is developed, subsequent versions of this table will reflect the transfer of a share of the minimum OMP&R costs presently shown in Table B-11.

Table B-27

**Minimum OMP&R Costs of Each Aqueduct Reach to Be Reimbursed

a) Under Article 49(d)(4)(A) of its contract, San Bernardino Valley Municipal Water District elected to pay a portion of its allocated costs of East Branch Enlargement in advance rather than to participate in payment of Water System Revenue Bonds. This election made via a letter of agreement signed June 1, 1987. As of June 1999, \$6,347,938 has been received from the San Bernardino Valley Municipal Water District.
