

Summary of WOMT Decision 4/3/2007

WOMT discussed the recommendation to moderate OMR not to exceed -5,000 cfs over a 5 day averaging period, for delta smelt protection, again this week. At the WOMT meeting of 3/27/2007, WOMT requested the DSWG evaluate using a 14-day OMR averaging period to permit averaging across the neap or spring tidal cycle. There are still outstanding technical issues; therefore WOMT hasn't concluded the discussion. WOMT will continue to discuss the OMR averaging period at the next meeting, 4/10/2007.
