

WOMT Decision 12/11/07

Based upon the Chinook Salmon Decision Process, the salmon biologists have recommended closing the Delta Cross Channel gates on Friday, Dec. 14th, to protect winter and spring-run Chinook salmon, unless there is a water quality issue. Delta water quality is currently good. D-1641 allows the DCC to be closed for the November-January period for up to a total of 45 days for fish protection.

WOMT concurs with this recommendation.

The next WOMT on Dec. 18, 2007 will be a conference call.
