

WOMT Summary for 5/27/08:

The Smelt Working Group made no change to its recommendation from last week; the Projects should continue operating to a 7-day running average Old & Middle River flow of -2,000 cfs and keep the ag barriers' flapgates tied open. USFWS and DFG determined that this action would be adequately protective of delta and longfin smelt.

Reclamation will continue to open the Delta Cross Channel gates on the weekends through June 15.
