

### **WOMT Summary for December 28, 2010**

The WOMT Agencies met and discussed the following:

The DOSS advice to WOMT and NMFS is to maintain an OMR flow of no more negative than -5,000 cfs beginning on January 1, 2011, to protect winter-run and steelhead juveniles emigrating through the Delta.

NMFS accepts the DOSS advice and determines that operating the the SWP and CVP such that OMR flow is no more negative than -5000 cfs is consistent with Action IV.2.3 in the 2009 NMFS biological opinion (page 648) and will provide the intended protection for salmon and steelhead.
