

## **WOMT Summary for May 24, 2011**

The WOMT met and discussed the following:

Smelt Working Group did not meet this week and has no recommendation for delta smelt or longfin smelt at this time and will continue to monitor salvage, survey data and hydrological conditions.

DOSS advises to continue the implementation of NMFS Action IV.2.1 (4:1 ratio) to protect juvenile steelhead emigrating from the San Joaquin River basin and OMR flows (NMFS Action IV.2.3) at no more negative than -5,000 cfs.

NMFS accepts the advice from DOSS and determines that managing CVP/SWP operations is consistent with the intended implementation of Actions IV.2.1 and IV.2.3 and sufficiently protective of listed species present in the Delta at this time.
