## WEATHER MODIFICATION OPERATIONS IN CALIFORNIA

July 1952 through June 1956

### Introduction

The State Legislature, in July 1951, enacted legislation (Chapter 1677, Statutes of 1951) for the regulation and licensing of artificial weather modification operations in California. This act, which was codified in 1953 as Chapter 4, Division 1 of the Water Code, provides that the Department of Water Resources\* shall regulate, control and encourage scientific experimentation in the field of artificial nucleation in order to develop, conserve, and protect the natural water resources of the State and to safeguard life and property.

Appropriate procedures have been established for administration of the act. Licenses to engage in artificial nucleation operations are issued upon proper application and payment of fees. All proposed projects are publicized and recorded with the Department. Licensees are required to maintain adequate records and to file suitable reports with the Department. These administrative procedures are presented herein.

Complete records of weather modification operations throughout the State since 1951 are available in the files of the Department. A compilation of these operations for the period July 1952 through June 1956 is included in this report. Data on prior operations has been published in State Water Resources Board Bulletin No. 16 "Weather Modification Operations in California," June 1955.

---

\* The Department of Water Resources was vested with all powers and duties of the State Engineer pertaining to artificial nucleation operations effective July 5, 1956, pursuant to Sec. 153, Chap. 52, Statutes first extra session 1956.

Administrative Procedures

The statutory provisions regarding artificial weather modification operations are found in Chapter 4, Division 1 of the Water Code "Regulation of Rain-Making and Rain-Prevention," included herein as Appendix A. Following are the procedures that have been established for administration of this chapter.

Any person desiring to engage in artificial weather modification operations must secure a license from the Department. Application for license must be submitted on Form 265 "Application for License to Engage in Operations to Modify Natural Precipitation by Artificial Means," and accompanied by a filing fee in the amount of \$50. A license is valid for the calendar year in which granted; and can be renewed annually upon application and payment of a renewal fee of \$25.

All projects must be adequately publicized. The licensee is required to file with the Department, and cause to be published, a notice of intention prior to initiating actual operations. The nature, location, time, and scope of the contemplated project should be indicated in the notice, which may be in substantially the following form:

---

NOTICE OF INTENTION TO MODIFY  
NATURAL PRECIPITATION BY ARTIFICIAL MEANS

NOTICE IS HEREBY GIVEN, THAT - - - - (Name of Licensee) - - - -  
of - - - - (address in full) - - - -, who holds License No. \*\*\*\*\* of the  
State of California to engage in operations to modify natural precipitation  
by artificial means, for and on behalf of - - - - (retaining organization) -  
located at - - - - (address in full) - - - - -, will conduct a program of  
weather modification - - - - (give nature and object of intended operation)  
- - - - as follows:

1. Area in which equipment will be operated ---- (describe) ---
2. The target area will be - - - - (describe) - - - -.
3. Area adjacent to target area which may be subject to effects  
of operation will be - - - - (describe) - - - -.

The operation will extend over the period from about - - - - -  
to about - - - - -.

Dated: (signed) \_\_\_\_\_

The notice should be published in local newspapers at least once a week for three consecutive weeks, and proof of publication filed with the Department within fifteen days from date of last publication. The Department may, at its discretion, grant permission to a licensee to undertake emergency nucleation operations without prior publication of notice of intention, if deemed necessary or desirable to aid in extinguishment of fires, or for alleviating drought emergency.

It is incumbent upon each licensee to maintain records of his operations. Immediately upon completion of each project, a report must be filed with the Department setting forth details of the operation. Form 273 "Completion Report by Licensee" is furnished for this purpose. An evaluation of the results of each operation, including an estimate of the gain or loss in precipitation attributable to nucleation activities and supporting data therefor is also required. The licensee may utilize Form 274 "Weather Modification Evaluation Statement" for this report, and may augment or amplify the data submitted with a copy of any other evaluation report prepared for the client or otherwise.

Copies of the several aforementioned forms are presented as Appendix B to this report.

#### Summary of Operations

In 1951, the year that the licensing requirement went into effect, eight licenses were issued, and a total of seventeen have been granted to date. At present eleven of these licenses are effective, including four that date back to the first year of regulation. These are listed in Table 1, which also indicates the calendar years during which each was valid.

Weather modification operations have been conducted throughout the State from Modoc and Siskiyou Counties on the north to Orange and San Diego Counties on the south. Most of the activity, however, has been concentrated along the westward slopes of the Sierra Nevada. Much of the work has been sponsored by public utilities to increase precipitation on the watersheds above their hydroelectric installations, although hail prevention and dissipation of lightning to decrease the incidence of forest fires have also been objectives.

A number of chemicals have been utilized as nucleating agents. Among these are silver iodide (AgI), dry ice (CO<sub>2</sub>), salt (NaCl), and titanium tetrachloride (TiCl<sub>4</sub>). The process most frequently used involves the creation of smoke plumes by burning silver iodide-impregnated coke in ground generators.

Weather modification projects in California during the four-year period July 1, 1952 to June 30, 1956 are listed in Table 2. A daily log of operations is presented as Plate 1 and their locations are delineated on Plate 2. These operations are grouped by runoff years (July 1 to June 30) and each is designated by a compound number consisting of three components. The first element is the license number, the second indicates the year of operation, and the third is assigned in numerical sequence to the several projects undertaken by a licensee during a runoff year as shown by notices of intention filed with the Department. As previously mentioned, records of weather modification operations in California conducted prior to July 1, 1952 are presented in State Water Resources Board Bulletin No. 16, "Weather Modification Operations in California".

TABLE 2  
 WEATHER MODIFICATION OPERATIONS  
 July 1, 1952 - June 30, 1956

Operation number	Licensee	Client	Area	Period of operation	Nucleating agent	Total generator hours	Remarks
<u>1952 - 53 Season</u>							
1-53-1	North American Weather Consultants	Southern California Edison Company	Fresno and Madera Counties	Aug. 28, 1952 to Sep. 27, 1953	AgI	2,298	
1-53-2	North American Weather Consultants	Pacific Gas & Electric Company	Stanislaus and Mokelumne River Basins	Feb. 28, 1953 to May 27, 1953	AgI	1,147	
1-53-3	North American Weather Consultants	Santa Barbara County Water Agency	Santa Barbara County	Dec. 16, 1952 to Apr. 30, 1953	AgI	1,499	
4-53-1	California Electric Power Company	California Electric Power Company	Bishop Creek area near Bishop	May 14, 1953 to Nov. 14, 1953	CO <sub>2</sub>	-----	
6-53-1	Weather Modification Company	San Diego County Weather Corporation and Santa Ana River Weather Corporation	Imperial, Los Angeles, Orange, Riverside, San Bernardino, and San Diego Counties	Nov. 6, 1952 to May 15, 1953	AgI	1,860	
6-54-1	Weather Modification Company	F.W. Gorham and Associates	San Benito, Fresno, and Monterey Counties	Mar. 12, 1953 to Apr. 29, 1953	AgI	56	
9-53-1	Placer County Farm Labor Cooperative, Inc.	Placer County Farm Labor Cooperative, Inc.	Area in Placer County from Lincoln to American River, and bounded by City of Rocklin on west and Clipper Gap on east.	Mar. 16, 1953 to June 7, 1953	CO <sub>2</sub> and NaCl	353	Hail prevention
10-52-1	Jack M. Hubbard	Coast Redwood Company	Coastal area between Cape Mendocino and Crescent City	Aug. 9, 1952 to Sep. 7, 1952	AgI and TiCl <sub>4</sub>	1,358	Extinguishing forest fires

CHAPTER 4, DIVISION 1 OF THE WATER CODE

CHAPTER 4, DIVISION 1 OF THE WATER CODE, STATE OF CALIFORNIA

REGULATION OF RAIN-MAKING AND RAIN-PREVENTION

(Chapter 4 added by Stats. 1953, Ch. 139, as part of codification)

400. The public interest, health, safety, welfare, and necessity require that scientific experimentation in the field of artificial nucleation, and that scientific efforts to develop, increase, and regulate natural precipitation be encouraged, and that means be provided for the regulation and control of interference by artificial means with natural precipitation of rain, snow, moisture, or water in any form contained in the atmosphere, within the State, in order to develop, conserve, and protect the natural water resources of the State and to safeguard life and property.

401. As used in this chapter:

(a) "Department"<sup>\*</sup> means the Department of Public Works acting through the State Engineer.

(b) "Person" means any person, firm, association, organization, partnership, company, corporation, private or public, county, city, city and county, district, or other public agency.

402. No person, without first securing a license from the department, shall cause or attempt to cause condensation or precipitation of rain, snow, moisture, or water in any form contained in the atmosphere, or shall prevent or attempt to prevent by artificial means the natural condensation or precipitation of rain, snow, moisture, or water in any form contained in the atmosphere.

403. Any person desiring to do any of the acts specified in Section 402 may file with the department an application in writing for a license. Each application shall be accompanied by a filing fee fixed by the department with the approval of the Department of Finance but not to exceed fifty dollars (\$50) and shall be on a form to be supplied for such purpose by the department.

404. Every application shall set forth all of the following:

(a) The name and post-office address of the applicant.

(b) The previous education, experience, and qualifications of the applicant, or, if the applicant is other than an individual, the previous education, experience, and qualifications of the persons who will be in control of and charged with the operations of the applicant.

\* Pursuant to provisions of Sec. 153, Chap. 52, Stats. first extra session, 1956, the Department of Water Resources ". . . succeeds to and is vested with all of the powers, duties, purposes, responsibilities, and jurisdiction in matters pertaining to water or dams vested in the Department and Director of Public Works, the Division of Water Resources of the Department of Public Works, the State Engineer . . . or any officer or employee thereof." This chapter became effective on July 5, 1956.

(c) A general description of the operations which the applicant intends to conduct and the method and type of equipment that the applicant proposes to use.

(d) Such other pertinent information as the department may require.

405. Upon the filing of the application upon a form supplied by the department and containing the information prescribed by this chapter and accompanied by the required filing fee the department shall issue a license to the applicant entitling the applicant to conduct the operations described in the application for the calendar year for which the license is issued, unless the license is sooner revoked or suspended.

406. A license may be renewed annually upon application to the department, accompanied by a renewal fee fixed by the department with the approval of the Department of Finance but not to exceed twenty-five dollars (\$25), on or before the last day of January of the calendar year for which the license is renewed.

407. Prior to undertaking any operation authorized by the license the licensee shall file with the department and cause to be published a notice of intention. The licensee shall then confine his activities for that operation substantially within the time and area limits set forth in the notice of intention.

408. The notice of intention shall set forth all of the following:

(a) The name and address of the licensee.

(b) The nature and object of the intended operation and the person or persons on whose behalf it is to be conducted.

(c) The area in which and the approximate time during which the operation will be conducted.

(d) The area which will be affected by the operation as near as the same may be determined in advance.

409. The licensee shall cause the notice of intention to be published at least once a week for three consecutive weeks in a newspaper having a general circulation and published within any county wherein the operation is to be conducted and in which the affected area is located, or, if the operation is to be conducted in more than one county or if the affected area is located in more than one county or is located in a county other than the one in which the operation is to be conducted, then such notice shall be caused to be published in like manner in a newspaper having a general circulation and published within each of such counties. In case there is no newspaper published within the appropriate county, publication shall be made in a newspaper having a general circulation within the county.

(Amended by Stats. 1955, Ch. 482)

410. Proof of publication shall be filed by the licensee with the department within 15 days from the date of the last publication of the notice. Proof of publication shall be by copy of the notice as published attached to and made a part of the affidavit of the publisher or foreman of the newspaper publishing the notice.

411. Every licensee shall keep and maintain a record of all operations conducted by him pursuant to his license showing the method employed, the type of equipment used, the times and places of operation of the equipment, the name and post-office address of each person participating or assisting in the operation other than the licensee, and such other information as may be required by the department, and shall report the same to the department immediately upon the completion of each operation.

412. Each licensee shall further prepare and maintain an evaluation statement for each operation which shall include a report as to estimated precipitation, defining the gain or loss occurring from nucleation activities, together with supporting data therefor. This statement, together with such other pertinent information as the department may require, shall be sent to the department upon request by the department.

413. Notwithstanding any provision of this chapter to the contrary, the department may grant a licensee permission to undertake an emergency nucleation project, without compliance by the licensee with the provisions of Sections 407 to 410, inclusive, if the same appears to the department to be necessary or desirable in aid of extinguishment of fires.

413.5 Notwithstanding any provision of this chapter to the contrary, upon request of the board of supervisors of a county or of the governing body of a city or a public district of the State, and upon the submission of such supporting evidence as the department may require, the department may grant a licensee permission to undertake a nucleation project for the purpose of alleviating a drought emergency, without prior compliance by the licensee with the provisions of Section 407 requiring publication of notice of intention, if such project appears to the department to be necessary or desirable. Nothing contained in this section shall be construed as to relieve the licensee in such case from compliance with the provisions of Sections 407 to 410, inclusive, requiring publication of notice of intention and filing of proof of such publication, as soon after the granting of permission by the department as is practicable.

(Added by Stats. 1955, Ch. 1399.)

414. Any license may be revoked or suspended if the department finds, after due notice to the licensee and a hearing thereon, that the licensee has failed or refused to comply with any of the provisions of this chapter. The proceedings herein referred to shall be conducted in accordance with the provisions of the Administrative Procedure Act, Chapter 5, Part 1, Division 3, Title 2 of the Government Code and the department shall have all the powers granted therein.

415. Any person who violates any provision of this chapter is guilty of a misdemeanor.

Honorable Goodwin J. Knight, Governor,  
and Members of the Legislature of the  
State of California

Gentlemen:

I have the honor to transmit herewith a report of the Department of Water Resources entitled, "Weather Modification Operations in California, July, 1956-June, 1957."

During the period covered by the report, there were 18 projects involving weather modification operations which were undertaken in California. These projects were accomplished by 11 operators who were licensed by the Department for such activities.

Very truly yours,

A handwritten signature in cursive script that reads "Harvey O. Banks".

## WEATHER MODIFICATION OPERATIONS IN CALIFORNIA

July, 1956, through June, 1957

### INTRODUCTION

In July, 1951, the State Legislature enacted Chapter 1677, Statutes of 1951, for the regulation and licensing of weather modification in the State of California. This Act, which was codified in 1953 as Chapter 4, Division 1 of the Water Code, provides that:

"No person, without first securing a license from the department shall cause or attempt to cause condensation or precipitation of rain, snow, moisture, or water in any form contained in the atmosphere, or shall prevent or attempt to prevent by artificial means the natural condensation or precipitation of rain, snow, moisture, or water in any form contained in the atmosphere."

In addition, licensees are required by law to submit a completion report to the Department at the conclusion of each weather modification project conducted by them. The completion reports include records of all operations, type of equipment used, time and place of operation of the equipment and such other information as may be required by the Department. This summary on weather modification activities in California has been prepared from the completion reports submitted by licensees and from other available data.

Statutory provisions pertinent to artificial weather modification operations are included herein as Appendix A.

This report on weather modification operations includes records of operation throughout the State for the period July, 1956, through June, 1957. A complete record of weather modification operations since 1951 is available in the files of the Department. A summary of operations conducted from July, 1952, through June, 1956, was embodied in a report "Weather Modification Operations in California," which was prepared in January, 1957, and given

limited distribution. Data on operations prior to 1952 and the evaluations of former cloud seeding studies and experiments were published in State Water Resources Bulletin No. 16, "Weather Modification Operations in California," June, 1955.

### SUMMARY OF OPERATIONS

During the period covered by this report, weather modification operations were conducted throughout the State from Siskiyou and Del Norte Counties in the north to San Diego and Riverside Counties in the south. A major part of the activity was concentrated along the western slope of the Sierra Nevada for the purpose of increasing precipitation on watersheds above hydroelectric installations. Other cloud seeding activities in mountainous regions were designed to dissipate lightning and reduce the incidence of forest fires. In principal agricultural areas and in the south coastal region, weather modification projects were placed in operation to suppress hail or increase precipitation.

Cloud seeding operations conducted during the period covered by this report included 13 projects for increasing precipitation, three projects for suppressing hail and one project designed to diminish lightning over the wooded areas of northern California. It is estimated that a total of 40,700 generator-hours were utilized in releasing 471,000 grams, or 1,040 pounds, of silver iodide in 153 days.

These 17 operations were conducted by seven different concerns holding licenses to conduct such operations. Table 1 lists all licenses which were in force during the period covered by this report.

Weather modification projects in California conducted during the period from July, 1956, through June, 1957, are listed in Table 2. Each project is designated by a compound number consisting of three components.

The first element is the license number, the second indicates the fiscal year of operation, and the third is assigned in numerical sequence to projects undertaken by a licensee during a precipitation year as shown by notices of intention filed with the Department. A daily log of cloud seeding is presented on Plate 1 and the approximate areas affected are delineated on Plate 2.

APPENDIX A

CHAPTER 4, DIVISION 1 OF THE WATER CODE

CHAPTER 4, DIVISION 1 OF THE WATER CODE, STATE OF CALIFORNIA

REGULATION OF RAIN-MAKING AND RAIN-PREVENTION

(Chapter 4 added by Stats. 1953, Ch. 139, as part of codification)

400. The public interest, health, safety, welfare, and necessity require that scientific experimentation in the field of artificial nucleation, and that scientific efforts to develop, increase, and regulate natural precipitation be encouraged, and that means be provided for the regulation and control of interference by artificial means with natural precipitation of rain, snow, moisture, or water in any form contained in the atmosphere, within the State, in order to develop, conserve, and protect the natural water resources of the State and to safeguard life and property.

401. As used in this chapter:

(a) "Department"\* means the Department of Public Works acting through the State Engineer.

(b) "Person" means any person, firm, association, organization, partnership, company, corporation, private or public, county, city, city and county, district, or other public agency.

402. No person, without first securing a license from the department, shall cause or attempt to cause condensation or precipitation of rain, snow, moisture, or water in any form contained in the atmosphere, or shall prevent or attempt to prevent by artificial means the natural condensation or precipitation of rain, snow, moisture, or water in any form contained in the atmosphere.

403. Any person desiring to do any of the acts specified in Section 402 may file with the department an application in writing for a license. Each application shall be accompanied by a filing fee fixed by the department with the approval of the Department of Finance but not to exceed fifty dollars (\$50) and shall be on a form to be supplied for such purpose by the department.

404. Every application shall set forth all of the following:

(a) The name and post-office address of the applicant.

(b) The previous education, experience, and qualifications of the applicant, or, if the applicant is other than an individual, the previous education, experience, and qualifications of the persons who will be in control of and charged with the operations of the applicant.

\* Pursuant to provisions of Sec. 153, Chap. 52, Stats. first extra session, 1956, the Department of Water Resources ". . . succeeds to and is vested with all of the powers, duties, purposes, responsibilities, and jurisdiction in matters pertaining to water or dams vested in the Department and Director of Public Works, the Division of Water Resources of the Department of Public Works, the State Engineer . . . or any officer or employee thereof." This chapter became effective on July 5, 1956.

(c) A general description of the operations which the applicant intends to conduct and the method and type of equipment that the applicant proposes to use.

(d) Such other pertinent information as the department may require.

405. Upon the filing of the application upon a form supplied by the department and containing the information prescribed by this chapter and accompanied by the required filing fee the department shall issue a license to the applicant entitling the applicant to conduct the operations described in the application for the calendar year for which the license is issued, unless the license is sooner revoked or suspended.

406. A license may be renewed annually upon application to the department, accompanied by a renewal fee fixed by the department with the approval of the Department of Finance but not to exceed twenty-five dollars (\$25), on or before the last day of January of the calendar year for which the license is renewed.

407. Prior to undertaking any operation authorized by the license the licensee shall file with the department and cause to be published a notice of intention. The licensee shall then confine his activities for that operation substantially within the time and area limits set forth in the notice of intention.

408. The notice of intention shall set forth all of the following:

(a) The name and address of the licensee.

(b) The nature and object of the intended operation and the person or persons on whose behalf it is to be conducted.

(c) The area in which and the approximate time during which the operation will be conducted.

(d) The area which will be affected by the operation as near as the same may be determined in advance.

409. The licensee shall cause the notice of intention to be published at least once a week for three consecutive weeks in a newspaper having a general circulation and published within any county wherein the operation is to be conducted and in which the affected area is located, or, if the operation is to be conducted in more than one county or if the affected area is located in more than one county or is located in a county other than the one in which the operation is to be conducted, then such notice shall be caused to be published in like manner in a newspaper having a general circulation and published within each of such counties. In case there is no newspaper published within the appropriate county, publication shall be made in a newspaper having a general circulation within the county.

(Amended by Stats. 1955, Ch. 482)

410. Proof of publication shall be filed by the licensee with the department within 15 days from the date of the last publication of the notice. Proof of publication shall be by copy of the notice as published attached to and made a part of the affidavit of the publisher or foreman of the newspaper publishing the notice.

411. Every licensee shall keep and maintain a record of all operations conducted by him pursuant to his license showing the method employed, the type of equipment used, the times and places of operation of the equipment, the name and post-office address of each person participating or assisting in the operation other than the licensee, and such other information as may be required by the department, and shall report the same to the department immediately upon the completion of each operation.

412. Each licensee shall further prepare and maintain an evaluation statement for each operation which shall include a report as to estimated precipitation, defining the gain or loss occurring from nucleation activities, together with supporting data therefor. This statement, together with such other pertinent information as the department may require, shall be sent to the department upon request by the department.

413. Notwithstanding any provision of this chapter to the contrary, the department may grant a licensee permission to undertake an emergency nucleation project, without compliance by the licensee with the provisions of Sections 407 to 410, inclusive, if the same appears to the department to be necessary or desirable in aid of extinguishment of fires.

413.5 Notwithstanding any provision of this chapter to the contrary, upon request of the board of supervisors of a county or of the governing body of a city or a public district of the State, and upon the submission of such supporting evidence as the department may require, the department may grant a licensee permission to undertake a nucleation project for the purpose of alleviating a drought emergency, without prior compliance by the licensee with the provisions of Section 407 requiring publication of notice of intention, if such project appears to the department to be necessary or desirable. Nothing contained in this section shall be construed as to relieve the licensee in such case from compliance with the provisions of Sections 407 to 410, inclusive, requiring publication of notice of intention and filing of proof of such publication, as soon after the granting of permission by the department as is practicable.

(added by Stats. 1955, Ch. 1399.)

414. Any license may be revoked or suspended if the department finds, after due notice to the licensee and a hearing thereon, that the licensee has failed or refused to comply with any of the provisions of this chapter. The proceedings herein referred to shall be conducted in accordance with the provisions of the Administrative Procedure Act, Chapter 5, Part 1, Division 3, Title 2 of the Government Code and the department shall have all the powers granted therein.

415. Any person who violates any provision of this chapter is guilty of a misdemeanor.

Honorable Edmund G. Brown, Governor,  
and Members of the Legislature of the  
State of California

Gentlemen:

I have the honor to transmit herewith a report of the Department of Water Resources entitled, "Weather Modification Operations in California, as reported to the Department of Water Resources, July, 1957 - September, 1958."

During the period covered by the report, there were 19 projects involving weather modification operations which were undertaken in California. These were accomplished by seven operators who were licensed by the Department for such activities.

Very truly yours,

A handwritten signature in cursive script, reading "Harvey O. Banks".

A	CHAPTER 4, DIVISION 1, OF THE WATER CODE . . . . .	6
---	--	---

# WEATHER MODIFICATION OPERATIONS IN CALIFORNIA

July, 1957, Through September, 1958

## INTRODUCTION

In July, 1951, the State Legislature enacted Chapter 1677, Statutes of 1951, for the regulation and licensing of weather modification in the State of California. This Act, which was codified in 1953 as Chapter 4, Division 1, of the Water Code, provides that:

"No person, without first securing a license from the department shall cause or attempt to cause condensation or precipitation of rain, snow, moisture, or water in any form contained in the atmosphere, or shall prevent or attempt to prevent by artificial means the natural condensation or precipitation of rain, snow, moisture, or water in any form contained in the atmosphere."

In addition, licensees are required by law to submit a completion report to the Department at the conclusion of each weather modification project conducted by them. The completion reports include records of all operations, type of equipment used, time and place of operation of the equipment, and such other information as may be required by the Department. This summary on weather modification activities in California has been prepared from the completion reports submitted by licensees and from other available data.

Statutory provisions pertinent to artificial weather modification operations are included herein as Appendix A.

This report on weather modification operations includes records of operation throughout the State for the period July 1, 1957, through September 30, 1958. Formerly, the report embraced the period from July through June. The period covered in this report was adopted so as to avoid separation of cloud seeding schedules for operations that extended from June into September. Henceforth, the period to be covered by this report will be from October 1

through September 30 of the following year. This will permit the summer projects, designed mostly for lightning suppression, to be summarized in one report.

A complete record of weather modification operations since 1951 is available in the files of the Department. Summaries of previous operations have been published as follows:

<u>Period of Operation</u>	<u>Publication</u>
Jan., 1947 - June, 1952	State Water Resources Board Bulletin No. 16 - June, 1955
July, 1952 - June, 1956	"Weather Modification Operations in California" - January, 1957
July, 1956 - June, 1957	"Weather Modification Operations in California" - July, 1958

#### SUMMARY OF OPERATIONS

During the period covered by this report, weather modification operations were conducted throughout the State from Siskiyou and Del Norte Counties in the north to Riverside County in the south. A major part of the activity was concentrated along the western slope of the Sierra Nevada for the purpose of increasing precipitation on watersheds above hydroelectric installations. Other cloud seeding activities in mountainous regions were designed to dissipate lightning and reduce the incidence of forest fires. In principal agricultural areas and in the south coastal region, weather modification projects were placed in operation to suppress hail or increase precipitation.

Cloud seeding operations conducted during the period covered by this report included 13 projects for increasing precipitation, three projects for suppressing hail, and three projects designed to diminish lightning over the wooded areas of northern California. It is estimated that a total of 55,500 generator-hours were utilized in releasing 680,000 grams, or 1,970 pounds of

silver iodide in 727 total generator-days of cloud seeding during 234 calendar days between July 2, 1957, and September 25, 1958.

These 19 operations were conducted by seven of the eight concerns holding licenses to conduct such operations. Table 1 lists all licenses which were in force during the period covered by this report. The Department of Water Resources is not a cloud seeding agency.

Weather modification projects in California conducted during the period from July, 1957, through September, 1958, are listed in Table 2. Each project is designated by a compound number consisting of three components. The first element is the license number, the second indicates the fiscal year of operation, and the third is assigned in numerical sequence to projects undertaken by a licensee during a precipitation year, as shown by notices of intention filed with the Department. A daily log of cloud seeding is presented on Plate 1 and the approximate areas affected are delineated on Plate 2.

APPENDIX A

CHAPTER 4, DIVISION 1 OF THE WATER CODE

APPENDIX A

CHAPTER 4, DIVISION 1 OF THE WATER CODE

REGULATION OF RAIN-MAKING AND RAIN-PREVENTION

(Chapter 4 added by Stats. 1953, Ch. 139, as part of codification)

400. The public interest, health, safety, welfare, and necessity require that scientific experimentation in the field of artificial nucleation, and that scientific efforts to develop, increase, and regulate natural precipitation be encouraged, and that means be provided for the regulation and control of interference by artificial means with natural precipitation of rain, snow, moisture, or water in any form contained in the atmosphere, within the State, in order to develop, conserve, and protect the natural water resources of the State and to safeguard life and property.

401. As used in this chapter:

- (a) "Department"\* means the Department of Public Works acting through the State Engineer.
- (b) "Person" means any person, firm, association, organization, partnership, company, corporation, private or public, county, city, city and county, district, or other public agency.

402. No person, without first securing a license from the department, shall cause or attempt to cause condensation or precipitation of rain, snow, moisture, or water in any form contained in the atmosphere, or shall prevent or attempt to prevent by artificial means the natural condensation or precipitation of rain, snow, moisture, or water in any form contained in the atmosphere.

403. Any person desiring to do any of the acts specified in Section 402 may file with the department an application in writing for a license. Each application shall be accompanied by a filing fee fixed by the department with the approval of the Department of Finance but not to exceed fifty dollars (\$50) and shall be on a form to be supplied for such purpose by the department.

404. Every application shall set forth all of the following:

- (a) The name and post-office address of the applicant.

\* Pursuant to provisions of Sec. 153, Chap. 52, Stats. first extra session, 1956, the Department of Water Resources ". . . succeeds to and is vested with all of the powers, duties, purposes, responsibilities, and jurisdiction in matters pertaining to water or dams vested in the Department and Director of Public Works, the Division of Water Resources of the Department of Public Works, the State Engineer . . . or any officer or employee thereof." This chapter became effective on July 5, 1956.

- (b) The previous education, experience, and qualifications of the applicant, or, if the applicant is other than an individual, the previous education, experience, and qualifications of the persons who will be in control of and charged with the operations of the applicant.
- (c) A general description of the operations which the applicant intends to conduct and the method and type of equipment that the applicant proposes to use.
- (d) Such other pertinent information as the department may require.

405. Upon the filing of the application upon a form supplied by the department and containing the information prescribed by this chapter and accompanied by the required filing fee the department shall issue a license to the applicant entitling the applicant to conduct the operations described in the application for the calendar year for which the license is issued, unless the license is sooner revoked or suspended.

406. A license may be renewed annually upon application to the department, accompanied by a renewal fee fixed by the department with the approval of the Department of Finance but not to exceed twenty-five dollars (\$25), on or before the last day of January of the calendar year for which the license is renewed.

407. Prior to undertaking any operation authorized by the license the licensee shall file with the department and cause to be published a notice of intention. The licensee shall then confine his activities for that operation substantially within the time and area limits set forth in the notice of intention.

408. The notice of intention shall set forth all of the following:

- (a) The name and address of the licensee.
- (b) The nature and object of the intended operation and the person or persons on whose behalf it is to be conducted.
- (c) The area in which and the approximate time during which the operation will be conducted.
- (d) The area which will be affected by the operation as near as the same may be determined in advance.

409. The licensee shall cause the notice of intention to be published at least once a week for three consecutive weeks in a newspaper having a general circulation and published within any county wherein the operation is to be conducted and in which the affected area is located, or, if the operation is to be conducted in more than one county or if the affected area is located in more than one county or is located in a county other than the one in which the operation is to be conducted, then such notice shall be caused to be published in

like manner in a newspaper having a general circulation and published within each of such counties. In case there is no newspaper published within the appropriate county, publication shall be made in a newspaper having a general circulation within the county.

(Amended by Stats. 1955, Ch. 482)

410. Proof of publication shall be filed by the licensee with the department within 15 days from the date of the last publication of the notice. Proof of publication shall be by copy of the notice as published attached to and made a part of the affidavit of the publisher or foreman of the newspaper publishing the notice.

411. Every licensee shall keep and maintain a record of all operations conducted by him pursuant to his license showing the method employed, the type of equipment used, the times and places of operation of the equipment, the name and post-office address of each person participating or assisting in the operation other than the licensee, and such other information as may be required by the department, and shall report the same to the department immediately upon the completion of each operation.

412. Each licensee shall further prepare and maintain an evaluation statement for each operation which shall include a report as to estimated precipitation, defining the gain or loss occurring from nucleation activities, together with supporting data therefor. This statement, together with such other pertinent information as the department may require, shall be sent to the department upon request by the department.

413. Notwithstanding any provision of this chapter to the contrary, the department may grant a licensee permission to undertake an emergency nucleation project, without compliance by the licensee with the provisions of Sections 407 to 410, inclusive, if the same appears to the department to be necessary or desirable in aid of extinguishment of fires.

413.5 Notwithstanding any provision of this chapter to the contrary, upon request of the board of supervisors of a county or of the governing body of a city or a public district of the State, and upon the submission of such supporting evidence as the department may require, the department may grant a licensee permission to undertake a nucleation project for the purpose of alleviating a drought emergency, without prior compliance by the licensee with the provisions of Section 407 requiring publication of notice of intention, if such project appears to the department to be necessary or desirable. Nothing contained in this section shall be construed as to relieve the licensee in such case from compliance with the provisions of Sections 407 to 410, inclusive, requiring publication of notice of intention and filing of proof of such publication, as soon after the granting of permission by the department as is practicable.

(Added by Stats. 1955, Ch. 1399.)

414. Any license may be revoked or suspended if the department finds, after due notice to the licensee and a hearing thereon, that the licensee has failed or refused to comply with any of the provisions of this chapter. The proceedings herein referred to shall be conducted in accordance with the provisions of the Administrative Procedure Act, Chapter 5, Part 1, Division 3, Title 2 of the Government Code and the department shall have all the powers granted therein.

415. Any person who violates any provision of this chapter is guilty of a misdemeanor.

---	--	---

WEATHER MODIFICATION OPERATIONS IN CALIFORNIA  
OCTOBER, 1958, THROUGH SEPTEMBER, 1959

INTRODUCTION

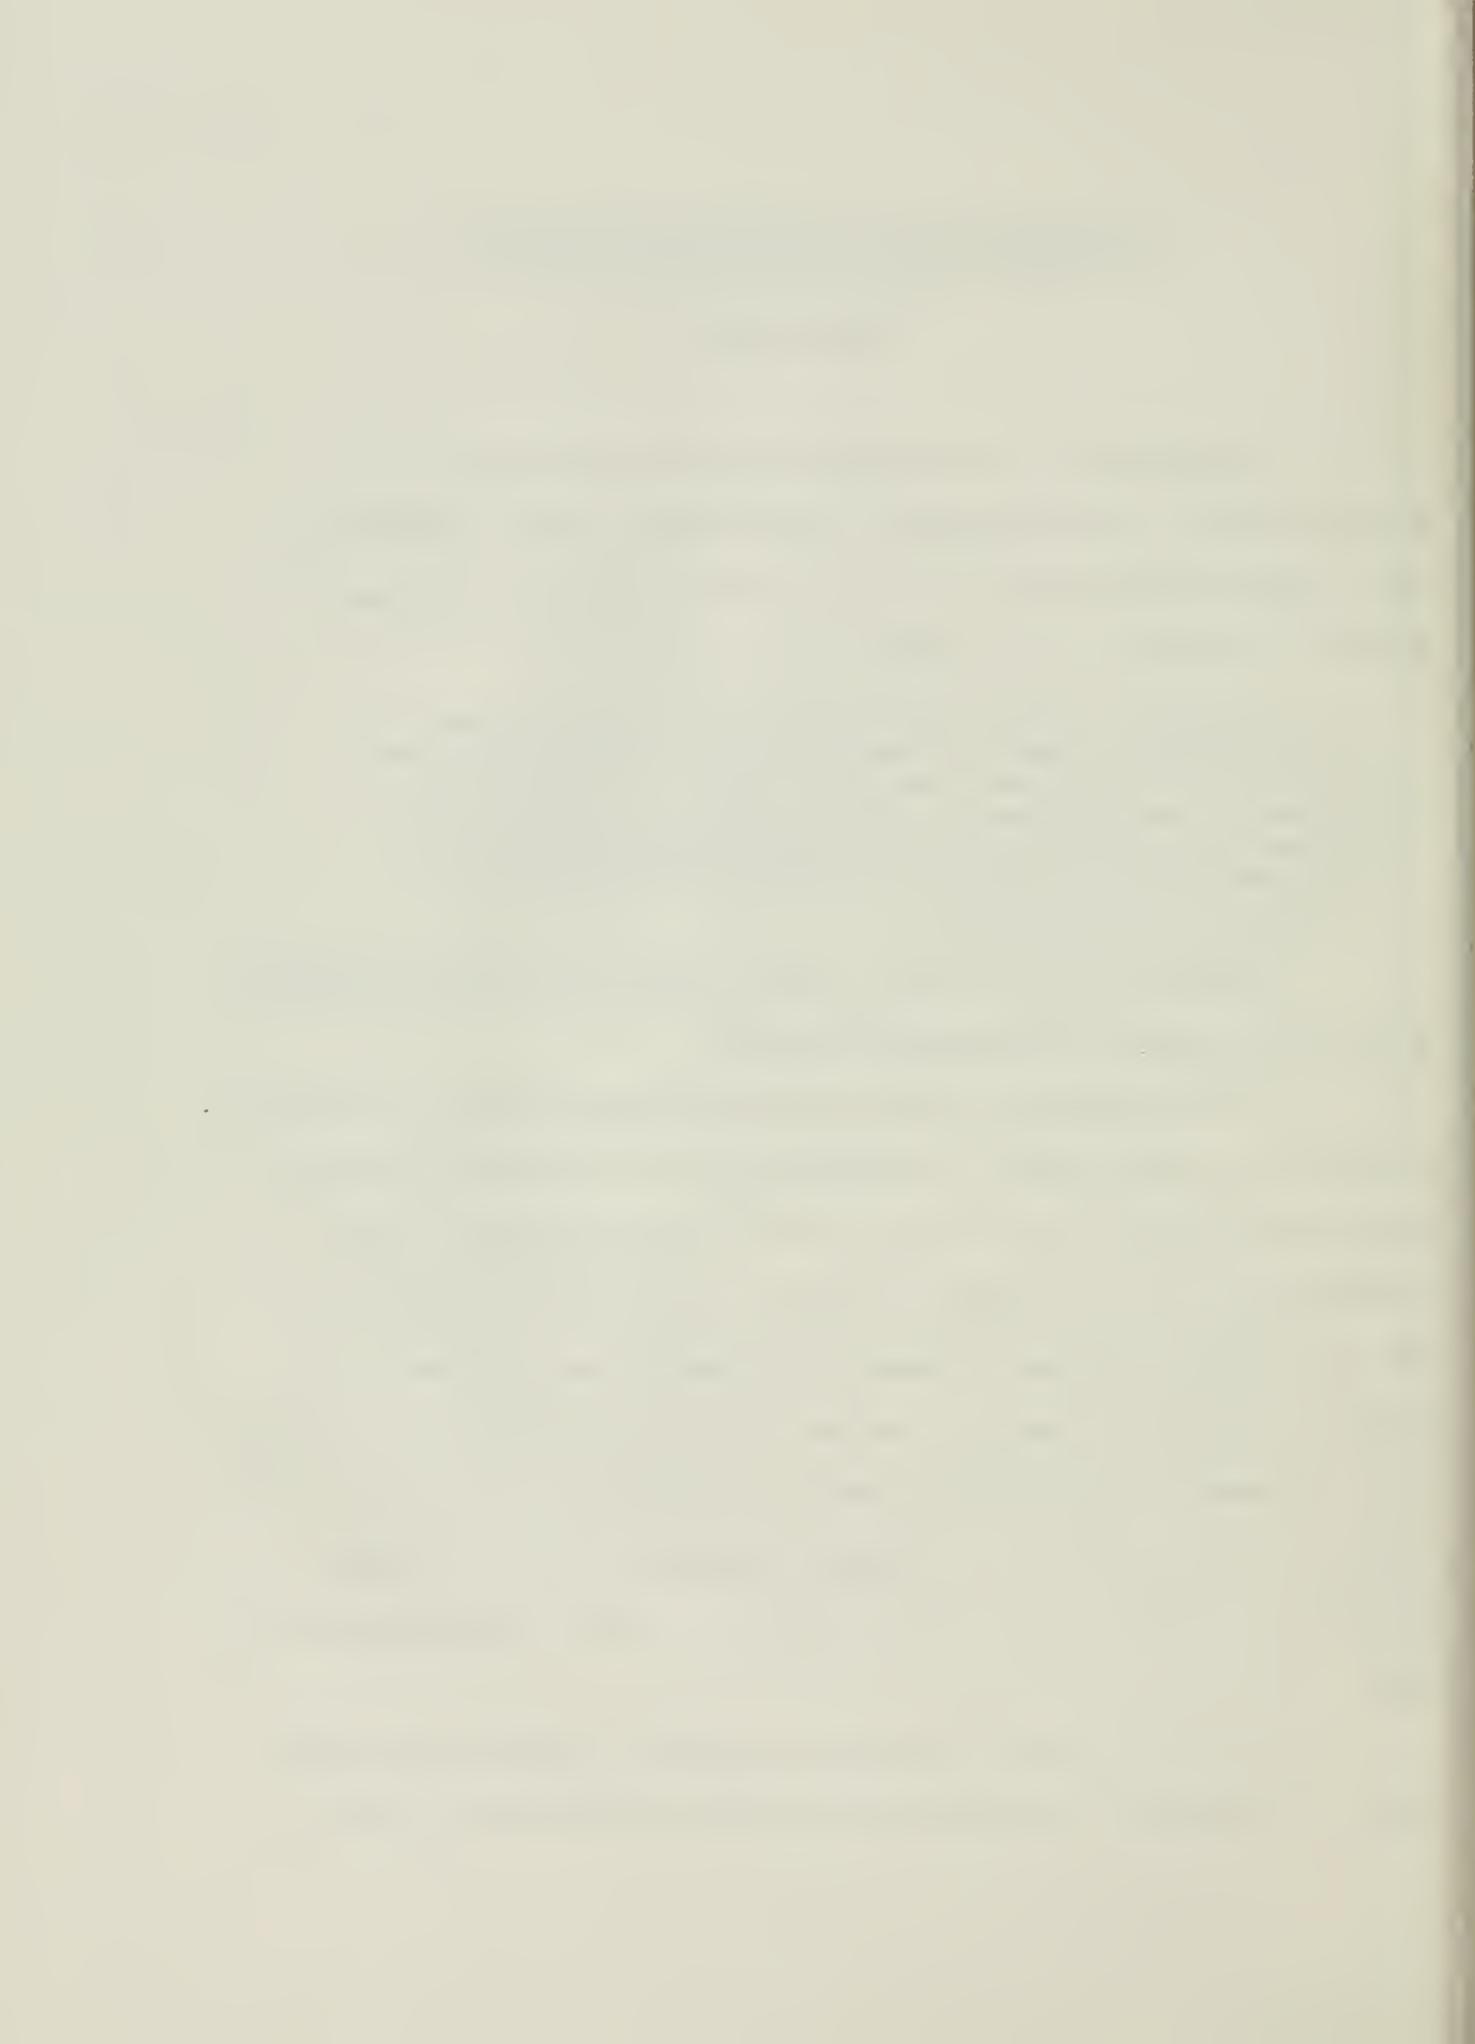

In July, 1951, the State Legislature enacted Chapter 1677, Statutes of 1951, for the regulation and licensing of weather modification in the State of California. This act, which was codified in 1953 as Chapter 4, Division 1, of the Water Code, provides that:

"No person, without first securing a license from the Department shall cause or attempt to cause condensation or precipitation of rain, snow, moisture, or water in any form contained in the atmosphere, or shall prevent, or attempt to prevent by artificial means the natural condensation or precipitation of rain, snow, moisture, or water in any form contained in the atmosphere".

Appendix A of this report contains statutory provisions pertinent to artificial weather modification activities.

At the conclusion of each weather modification project, licensees are required by law to submit a completion report. These reports include such information as the name or agency sponsoring the project, location of operation, log of all seeding operations, cloud seeding techniques and type of equipment used, and the names of all persons who assisted in the operation. This annual report of weather modification operations in California is a summary of the completion reports submitted by the licensees. This report on weather modification operations includes records of operation throughout the State for the period of October 1, 1958, through September 30, 1959.

A complete record of weather modification operations since 1951 (the year legislative action began the licensing and regulating of such

operations) is available in the files of the Department. In addition, a detailed report dealing with the theory of weather modification, evaluation of methods and results, and a schedule of cloud seeding operations from 1947 through 1952 may be found in Bulletin No. 16 dated June, 1955, by the State Water Resources Board. Summaries of weather modification operations in California have been published as follows:

<u>Period of Operations</u>	<u>Publication</u>
January, 1947 - June, 1952	State Water Resources Board Bulletin No. 16, - June, 1955
July, 1952 - June, 1956	"Weather Modification Operations in California" - January, 1957
July, 1956 - June, 1957	"Weather Modification Operations in California" - July, 1958
July, 1957 - September, 1958	"Weather Modification Operations in California" - July, 1959

#### SUMMARY OF OPERATIONS

During the period covered by this report, October, 1958, through September, 1959, weather modification operations were conducted throughout the State from Lassen County in the north to Riverside County in the south. The majority of operations were concentrated along the western slope of the Sierra Nevada for the purpose of increasing precipitation on watersheds above hydroelectric installations. In northern mountainous regions, one cloud-seeding project was designed to reduce forest fire hazards by eliminating lightning. Precipitation increase was the purpose for seeding activities in the South Coastal Area.

Cloud-seeding operations during 1958-59 included 17 projects:

14 for increasing precipitation, two for suppressing hail, and one to eliminate lightning. Between October 23, 1958, and September 15, 1959, an estimated 398,000 grams, or 880 pounds of silver iodide were released. Total estimated operating time was 28,600 generator-hours in 3,178 generator-days during 102 calendar days. Due to the fact that the period covered by the report has been a dry one, the opportunity for seeding operations has been less, hence, the amount of silver iodide released during 1958-59 was only 61 per cent of that released during a comparable period in 1957-58. Operating time this year was 58 per cent of last season's total generator-hours. One factor which influences this percentage of operating time is that seeding operations last year were conducted on 205 calendar days out of a possible 365, or 56 per cent of the time. This year, the 102 operating days were only 28 per cent of the possible 365 days.

The 17 operations in 1958-59 were conducted by seven of the nine licensed concerns. Table 1 lists all licenses which were in force during the period covered by this report. The Department of Water Resources is not a cloud seeding agency but merely acts as the licensor.

Weather modification projects in California conducted during the period from October, 1958, through September, 1959, are listed in Table 2. Each project is designated by a compound number consisting of three components. The first element is the license number, the second indicates the fiscal year of operation, and the third is assigned in numerical sequence to projects undertaken by a licensee during the year, as shown by published notices of intention of operation filed with the Department. A daily log of cloud seeding is presented on Plate 1 and the approximate areas affected are delineated on Plate 2.

APPENDIX A

CHAPTER 4, DIVISION 1 OF THE WATER CODE

CHAPTER 4, DIVISION 1 OF THE WATER CODE, STATE OF CALIFORNIA

REGULATION OF RAIN-MAKING AND RAIN-PREVENTION

(Chapter 4 added by Stats. 1953, Ch. 139, as part of codification)

400. The public interest, health, safety, welfare, and necessity require that scientific experimentation in the field of artificial nucleation, and that scientific efforts to develop, increase, and regulate natural precipitation be encouraged, and that means be provided for the regulation and control of interference by artificial means with natural precipitation of rain, snow, moisture, or water in any form contained in the atmosphere, within the State, in order to develop, conserve, and protect the natural water resources of the State and to safeguard life and property.

401. As used in this chapter:

- (a) "Department"\* means the Department of Public Works acting through the State Engineer.
- (b) "Person" means any person, firm, association, organization, partnership, company, corporation, private or public, county, city, city and county, district, or other public agency.

402. No person, without first securing a license from the department, shall cause or attempt to cause condensation or precipitation of rain, snow, moisture, or water in any form contained in the atmosphere, or shall prevent or attempt to prevent by artificial means the natural condensation or precipitation of rain, snow, moisture, or water in any form contained in the atmosphere.

403. Any person desiring to do any of the acts specified in Section 402 may file with the department an application in writing for a license. Each application shall be accompanied by a filing fee fixed by the department with the approval of the Department of Finance but not to exceed fifty dollars (\$50) and shall be on a form to be supplied for such purpose by the department.

404. Every application shall set forth all of the following:

- (a) The name and post-office address of the applicant.

\* Pursuant to provisions of Sec. 153, Chap. 52, Stats. first extra session, 1956, the Department of Water Resources ". . . succeeds to and is vested with all of the powers, duties, purposes, responsibilities, and jurisdiction in matters pertaining to water or dams vested in the Department and Director of Public Works, the Division of Water Resources of the Department of Public Works, the State Engineer . . . or any officer or employee thereof." This chapter became effective on July 5, 1956.

[The text on this page is extremely faint and illegible. It appears to be a multi-paragraph document, possibly a letter or a report, with several lines of text visible but not readable.]

- (b) The previous education, experience, and qualifications of the applicant, or, if the applicant is other than an individual, the previous education, experience, and qualifications of the persons who will be in control of and charged with the operations of the applicant.
- (c) A general description of the operations which the applicant intends to conduct and the method and type of equipment that the applicant proposes to use.
- (d) Such other pertinent information as the department may require.

405. Upon the filing of the application upon a form supplied by the department and containing the information prescribed by this chapter and accompanied by the required filing fee the department shall issue a license to the applicant entitling the applicant to conduct the operations described in the application for the calendar year for which the license is issued, unless the license is sooner revoked or suspended.

406. A license may be renewed annually upon application to the department, accompanied by a renewal fee fixed by the department with the approval of the Department of Finance but not to exceed twenty-five dollars (\$25), on or before the last day of January of the calendar year for which the license is renewed.

407. Prior to undertaking any operation authorized by the license the licensee shall file with the department and cause to be published a notice of intention. The licensee shall then confine his activities for that operation substantially within the time and area limits set forth in the notice of intention.

408. The notice of intention shall set forth all of the following:

- (a) The name and address of the licensee.
- (b) The nature and object of the intended operation and the person or persons on whose behalf it is to be conducted.
- (c) The area in which and the approximate time during which the operation will be conducted.
- (d) The area which will be affected by the operation as near as the same may be determined in advance.

409. The licensee shall cause the notice of intention to be published at least once a week for three consecutive weeks in a newspaper having a general circulation and published within any county wherein the operation is to be conducted and in which the affected area is located, or, if the operation is to be conducted in more than one county or if the affected area is located in more than one county or is located in a county other than the one in which the operation is to be conducted, then such notice shall be caused to be published in

like manner in a newspaper having a general circulation and published within each of such counties. In case there is no newspaper published within the appropriate county, publication shall be made in a newspaper having a general circulation within the county.

(Amended by Stats. 1955, Ch. 482)

410. Proof of publication shall be filed by the licensee with the department within 15 days from the date of the last publication of the notice. Proof of publication shall be by copy of the notice as published attached to and made a part of the affidavit of the publisher or foreman of the newspaper publishing the notice.

411. Every licensee shall keep and maintain a record of all operations conducted by him pursuant to his license showing the method employed, the type of equipment used, the times and places of operation of the equipment, the name and post-office address of each person participating or assisting in the operation other than the licensee, and such other information as may be required by the department, and shall report the same to the department immediately upon the completion of each operation.

412. Each licensee shall further prepare and maintain an evaluation statement for each operation which shall include a report as to estimated precipitation, defining the gain or loss occurring from nucleation activities, together with supporting data therefor. This statement, together with such other pertinent information as the department may require, shall be sent to the department upon request by the department.

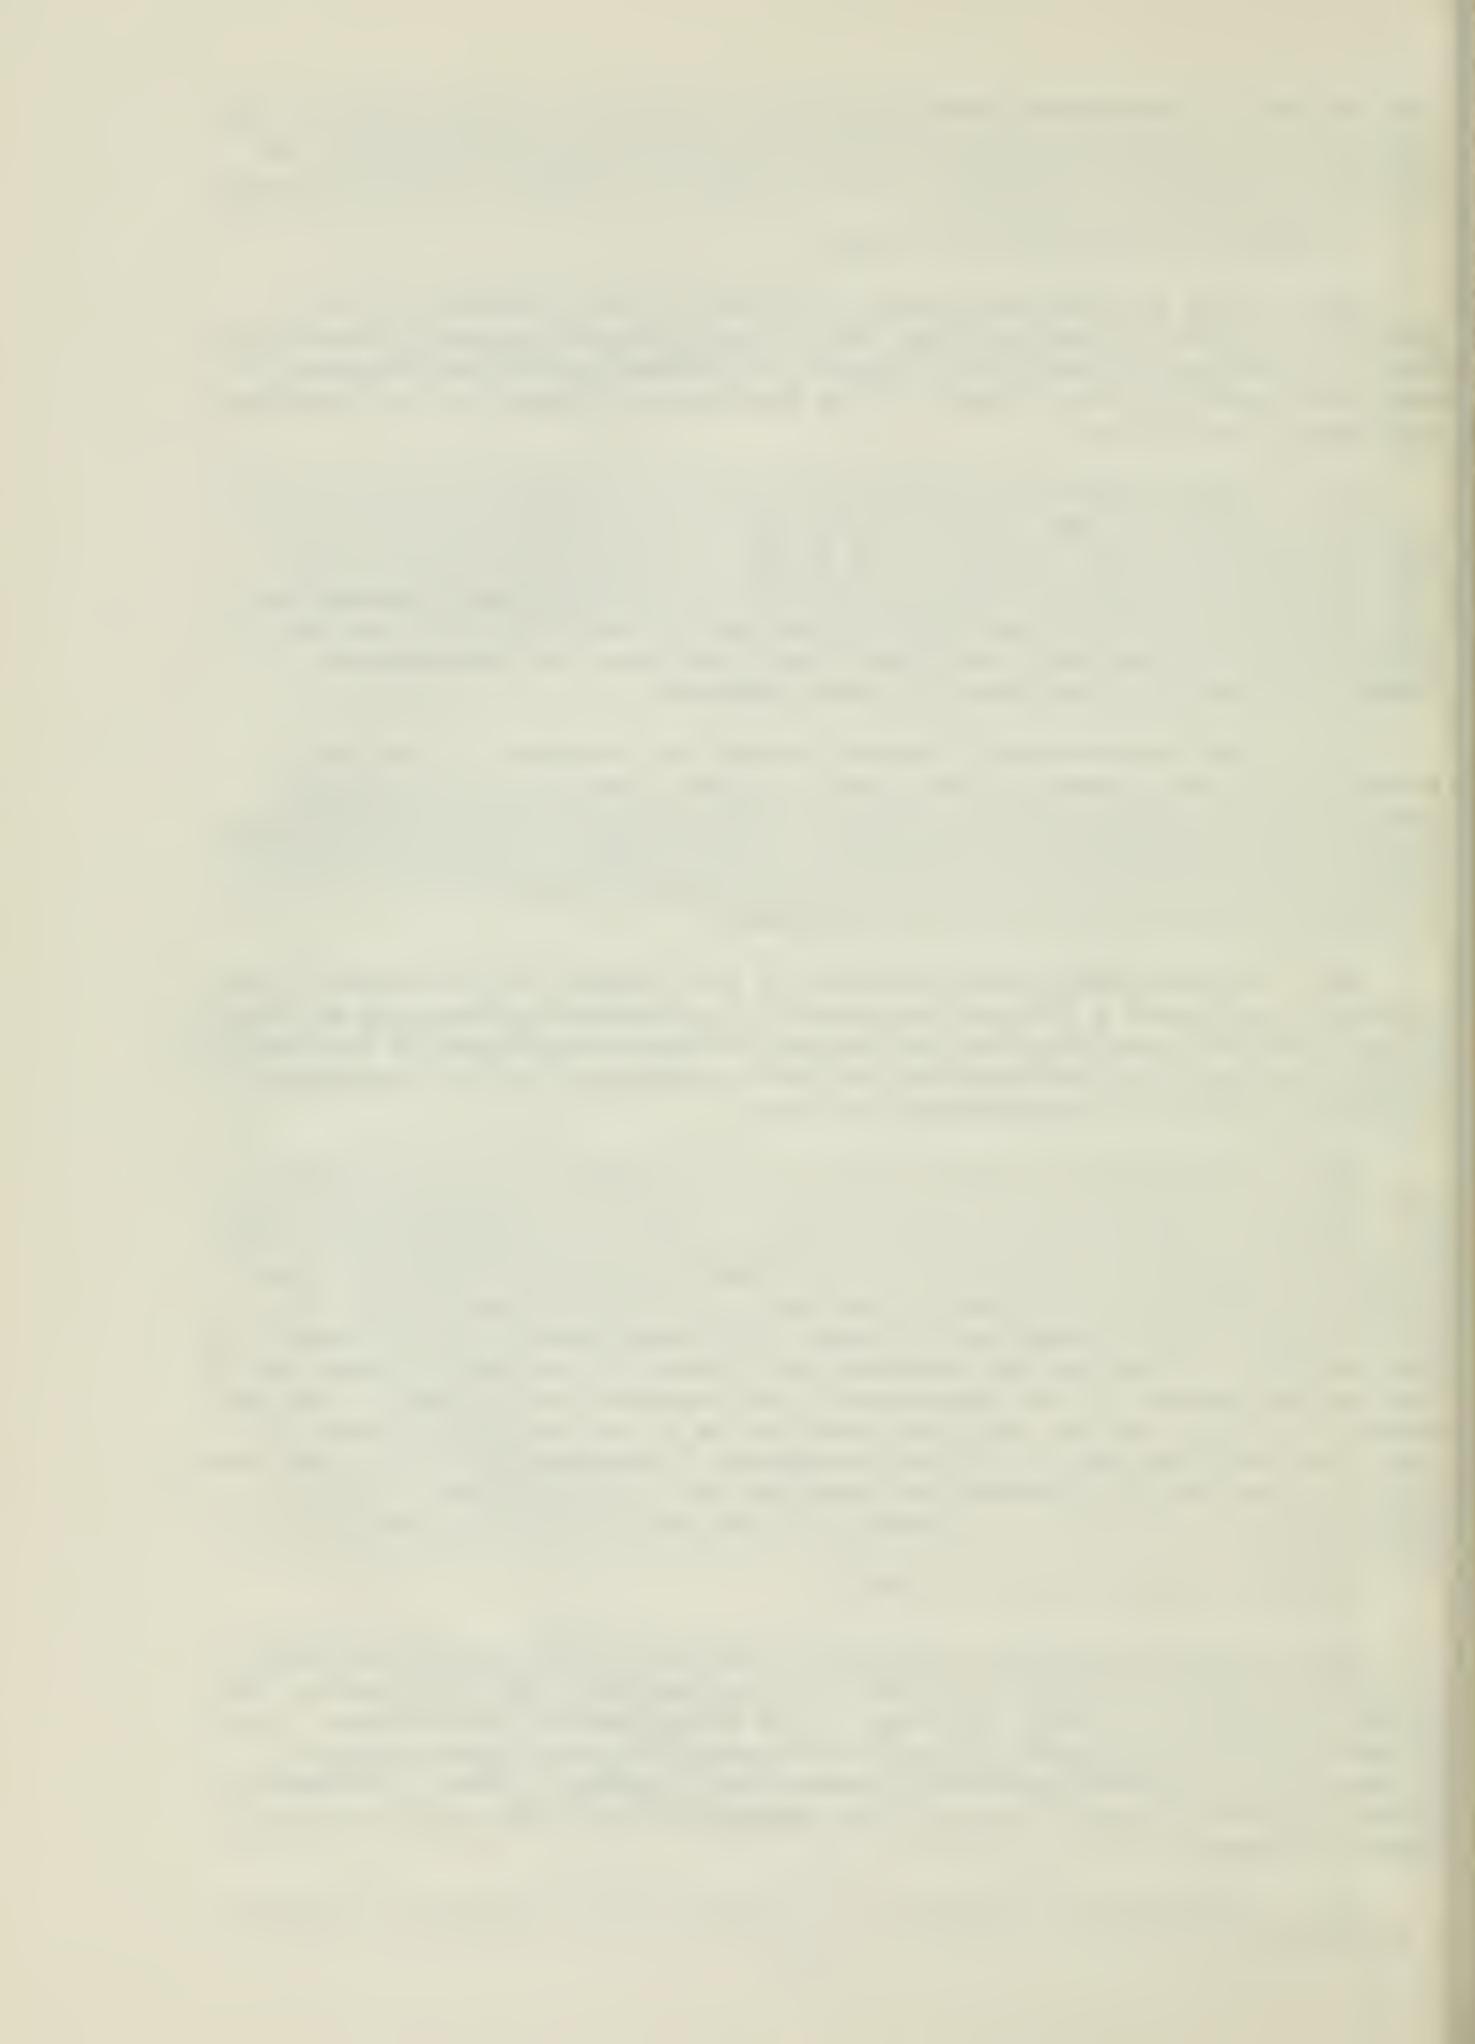

413. Notwithstanding any provision of this chapter to the contrary, the department may grant a licensee permission to undertake an emergency nucleation project, without compliance by the licensee with the provisions of Sections 407 to 410, inclusive, if the same appears to the department to be necessary or desirable in aid of extinguishment of fires.

413.5 Notwithstanding any provision of this chapter to the contrary, upon request of the board of supervisors of a county or of the governing body of a city or a public district of the State, and upon the submission of such supporting evidence as the department may require, the department may grant a licensee permission to undertake a nucleation project for the purpose of alleviating a drought emergency, without prior compliance by the licensee with the provisions of Section 407 requiring publication of notice of intention, if such project appears to the department to be necessary or desirable. Nothing contained in this section shall be construed as to relieve the licensee in such case from compliance with the provisions of Sections 407 to 410, inclusive, requiring publication of notice of intention and filing of proof of such publication, as soon after the granting of permission by the department as is practicable.

(Added by Stats. 1955, Ch. 1399)

414. Any license may be revoked or suspended if the department finds, after due notice to the licensee and a hearing thereon, that the licensee has failed or refused to comply with any of the provisions of this chapter. The proceedings herein referred to shall be conducted in accordance with the provisions of the Administrative Procedure Act, Chapter 5, Part 1, Division 3, Title 2 of the Government Code and the department shall have all the powers granted therein.

415. Any person who violates any provision of this chapter is guilty of a misdemeanor.

CHAPTER 10

1. The first part of the chapter discusses the importance of maintaining accurate records of all transactions. This is essential for the proper functioning of the business and for the preparation of financial statements.

10

2. The second part of the chapter discusses the various methods of recording transactions. These include the double-entry system, which is the most widely used method, and the single-entry system, which is simpler but less accurate.

11

3. The third part of the chapter discusses the importance of reconciling the books. This involves comparing the records of the business with the bank statements and other external records to ensure that they are in agreement.

SACRAMENTO

December 20, 1960

Honorable Edmund G. Brown, Governor,  
and Members of the Legislature of the  
State of California

Gentlemen:

I have the honor to transmit herewith a report of the Department of Water Resources entitled "Weather Modification Operations in California, as Reported to the Department of Water Resources, October, 1959 - September, 1960".

During the period covered by the report, there were 13 projects involving weather modification operations which were undertaken in California. These were accomplished by five of the ten operators who were licensed by the department for such activities.

Very truly yours,

A handwritten signature in black ink that reads "Harvey O. Banks".

WEATHER MODIFICATION OPERATIONS IN CALIFORNIA  
OCTOBER, 1959, THROUGH SEPTEMBER, 1960

INTRODUCTION

In July, 1951, the State Legislature enacted Chapter 1677, Statutes of 1951, for the regulation and licensing of weather modification in the State of California. This act, which has since been codified as Chapter 4, Division 1, of the Water Code, provides that:

"No person, without first securing a license from the department shall cause or attempt to cause condensation or precipitation of rain, snow, moisture, or water in any form contained in the atmosphere, or shall prevent, or attempt to prevent by artificial means the natural condensation or precipitation of rain, snow, moisture, or water in any form contained in the atmosphere".

Once a license is obtained, the licensee is free to operate at any time or place he chooses, provided he follows certain regulations pertaining to public notification. At the conclusion of each of their weather modification projects, licensees are required by law to submit a completion report to the Department of Water Resources. These reports include such information as the name of the agency sponsoring the project, location of the project, log of all seeding operations, cloud-seeding techniques and type of equipment used, and the names of all persons who assisted in the operation. These completion reports submitted by the licensees are summarized by the department in an annual report on weather modification operations in California. This report, which is the fifth in the series, summarizes completion reports on all operations conducted in the State during the period of October 1, 1959, through September 30, 1960.

A complete record of weather modification operations since 1951 (the year legislative action began the licensing and regulating of operations) is

available in the files of the department. In addition, a detailed report dealing with the theory of weather modification, evaluation of methods and results, and a schedule of cloud-seeding operations from 1947 through 1952 was published as Bulletin No. 16, "Weather Modification Operations in California", in June, 1955, by the State Water Resources Board. Subsequent summaries of weather modification operations in California have been published by the Department of Water Resources as follows:

<u>Period of Operations</u>	<u>Publication</u>
July, 1952 - June, 1956	Weather Modification Operations in California - January, 1957
July, 1956 - June, 1957	Weather Modification Operations in California - July, 1958
July, 1957 - September, 1958	Weather Modification Operations in California - July, 1959
October, 1958 - September, 1959	Weather Modification Operations in California - February, 1960

#### SUMMARY OF 1959-60 OPERATIONS

During the period covered by this report (October, 1959, through September, 1960), 13 weather modification operations were conducted in that portion of the State from Plumas County in the north to Riverside County in the south. Of the 13 cloud-seeding projects, ten were for the stated purpose of increasing precipitation, two were for increasing snow, and one was for suppressing hail. Several of these operations were concentrated along the western slope of the Sierra Nevada for the purpose of increasing precipitation on watersheds above hydroelectric installations. Precipitation increase was also the purpose of all of the seeding projects in Southern California. The projects which were conducted for the purpose of increasing snowpack for recreational purposes were located on the east side of the Sierra. Approximate areas affected by cloud-seeding operations during 1959-60 are shown on Plate 1.

The year covered by this report was an extremely dry one, hence the opportunity for seeding operations was limited. Total estimated operating time on all projects was 30,060 generator-hours. All projects used silver iodide as a nucleating agent, except for an experimental use of carbon black lasting 45 minutes. During the year, an estimated 313,900 grams, or 692 pounds, of silver iodide were released. The amount of silver iodide released during the 1959-60 season was only 79 per cent of that released during the previous 1958-59 season. Total operating time during the 1959-60 season, however, was 105 per cent of the previous season's. Of the 366 calendar days during the year covered by this report, seeding operations were conducted on 107 days, as opposed to 102 days for the 1958-59 season.

The 13 operations in 1959-60 were conducted by five of the ten licensed contractors. During the year covered by this report, one license was not renewed and two new licenses were issued. Table 1 lists all licenses which were in force during the period.

The Department of Water Resources is not a cloud-seeding agency, but merely acts as a licensor. However, during the period covered by this report, the department supported cloud-seeding operations in Santa Barbara County as part of an experiment designed to determine the effects of such operations on precipitation. Results of this experiment have been published by the department in the "Interim Report, Santa Barbara Weather Modification Project".

Projects conducted in California during the 1959-60 season are listed in Table 2, together with pertinent data on number of generator-hours, rate of use of silver iodide, etc. Each project in the table is designated by a coding number consisting of three elements. The first element is the license number, the second indicates the water year, and the third is assigned in numerical sequence to projects undertaken by a licensee during the year and as shown by

published notices of intention filed with the department. This code number is used to identify the project for which the daily cloud-seeding operations are shown on Plate 2, and for which the approximate areas affected by such operations are shown on Plate 1.

STATE OF CALIFORNIA  
**Department of Water Resources**  
SACRAMENTO

February 1, 1962

Honorable Edmund G. Brown, Governor  
and Members of the Legislature of the  
State of California

Gentlemen:

I have the honor to transmit herewith a report of the Department of Water Resources entitled "Weather Modification Operations in California, as Reported to the Department of Water Resources, October 1960 - September 1961".

During the period covered by the report, there were ten projects involving weather modification operations which were undertaken in California. These were accomplished by nine of the eleven operators who were licensed by the department for such activities.

Sincerely yours,

A handwritten signature in cursive script, appearing to read "William E. Warne".

Director

WEATHER MODIFICATION OPERATIONS IN CALIFORNIA  
OCTOBER 1960 THROUGH SEPTEMBER 1961

INTRODUCTION

In July 1951, the State Legislature enacted Chapter 1677, Statutes of 1951, for the regulation and licensing of weather modification in the State of California. This act, which has since been codified as Chapter 4, Division 1, of the Water Code, provides that:

"No person, without first securing a license from the department shall cause or attempt to cause condensation or precipitation of rain, snow, moisture, or water in any form contained in the atmosphere, or shall prevent, or attempt to prevent by artificial means the natural condensation or precipitation of rain, snow, moisture, or water in any form contained in the atmosphere".

Once a license is obtained, the licensee is free to operate at any time or place he chooses, provided he follows certain regulations pertaining to public notification. At the conclusion of each of their weather modification projects, licensees are required by law to submit a completion report to the Department of Water Resources. These reports include such information as the name of the agency sponsoring the project, location of the project, log of all seeding operations, cloud-seeding techniques and type of equipment used, and the names of all persons who assisted in the operation. These completion reports submitted by the licensees are summarized by the department in an annual report on weather modification operations in California. This report, which is the sixth in the series, summarizes completion reports on all operations conducted in the State during the period of October 1, 1960, through September 30, 1961.

A complete record of weather modification operations since 1951 (the year legislative action began the licensing and regulating of operations) is available in the files of the department. In addition, a detailed report dealing with the theory of weather modification, evaluation of methods and results, and a history of cloud-seeding operations from 1947 through 1952 was published as Bulletin No. 16, "Weather Modification Operations in California", in June 1955, by the State Water Resources Board. Subsequent summaries of weather modification operations in California have been published by the Department of Water Resources as follows:

July 1952 - June 1956	Weather Modification Operations in California - January 1957
July 1956 - June 1957	Weather Modification Operations in California - July 1958
July 1957 - September 1958	Weather Modification Operations in California - July 1959
October 1958 - September 1959	Weather Modification Operations in California - February 1960
October 1959 - September 1960	Weather Modification Operations in California - December 1960

#### SUMMARY OF 1960-61 OPERATIONS

During the period covered by this report (October 1960 through September 1961) ten weather modification operations were conducted. These were included in that portion of the State from Plumas County in the north to Riverside County in the south. Of the ten cloud-seeding projects, eight were for the stated purpose of increasing precipitation, one was for dispersing fog, and one

was for suppressing hail. Four of these operations were concentrated along the western slope of the Sierra Nevada for the purpose of increasing precipitation on watersheds above hydroelectric installations. Precipitation increase was also the purpose of the two seeding projects in Southern California. Approximate areas affected by cloud-seeding operations during 1960-61 are shown on Plate 1.

The year covered by this report was an extremely dry one, hence the opportunity for seeding operations was limited. Total estimated operating time on all projects was 15,555 generator-hours. All projects used silver iodide as a nucleating agent except for one operator's use of "dry ice" (solidified carbon dioxide) in airborne generators. During the year, an estimated 264,100 grams, or 607 pounds, of silver iodide and 2,025 pounds of "dry ice" were released.

The amount of silver iodide released during the 1960-61 season was 84 percent of that released during the previous 1959-60 season. Total operating time during the 1960-61 season, however, was only 52 percent of the previous season's. Of the 365 calendar days during the year covered by this report, seeding operations were conducted on 108 days, as opposed to 107 days for the 1959-60 season.

The ten operations in 1960-61 were conducted by nine of the eleven licensed contractors. During the year covered by this report, one license expired and was not renewed and three new licenses were issued. Table 1 lists all licenses which were in force during the period.

Projects conducted in California during the 1960-61 season are listed in Table 2, together with pertinent data on number of generator-hours, rate of use of silver iodide, etc. Each project in the table is designated by a coding number consisting of three elements. The first element is the license number, the second indicates the water year, and the third is assigned in numerical sequence to projects undertaken by a licensee during the year as shown by published notices of intention filed with the department. This code number is used to identify the project for which the daily cloud-seeding operations are shown on Plate 2, and for which the approximate target areas are shown on Plate 1.
