## FOREWORD

Division 3 of the California Water Code places the safety of nonfederal dams and reservoirs under the jurisdiction of the California Department of Water Resources. The jurisdiction covers dams 25 or more feet high which impound more than 15 acre-feet of water and dams more than 6 feet high which impound 50 or more acre-feet of water; it covers onstream and offstream storage facilities and entire reservoir basins.

Before August 14, 1929, the State of California exercised supervision to a very limited degree over less than half the dams in the State. In addition, several federal offices exercised supervision over a few other dams, but a large number still remained which had no form of supervision, either state or federal.

In 1928, the sudden failure of St. Francis Dam in Southern California resulted in a major disaster. Because of this failure and because of the potential hazard to the general populace from the many water storage projects in California, the Legislature in 1929 enacted a law providing supervision of dams in the State. Following the failure in 1963 of Baldwin Hills Dam in Southern California, the Water Code was amended by the Legislature to include within state jurisdiction both new and existing offstream storage facilities and entire reservoir basins. This amendment, which took effect on September 17, 1965, provides for both the approval of plans and specifications and construction supervision of all new offstream facilities and the examination and approval of repair of offstream dams and reservoirs completed before the effective date.

Provisions of the code are administered by the Department's Division of Safety of Dams. This division reviews plans and specifications for constructing a new dam or for repairing, altering or removing an existing dam and must grant approval in writing before the owner can proceed. Professional engineers from the division evaluate the safety of each project and investigate proposed sites and check available construction materials.

During construction, they identify conditions disclosed during site development which may require design changes; they check for compliance with approved plans and specifications; and they approve all foundations before they are covered. During operation, they periodically examine dams to detect unusual performance which, if not remedied, could lead to hazardous conditions. They purposely avoid codes of standard design, construction, or surveillance

requirements because such codes cannot apply uniformly to widely varying conditions at different damsites.

Authorization to store water in a dam or reservoir is given by a certificate of approval issued by the Department of Water Resources. These certificates may contain restrictive conditions and may be revoked as found necessary.

On October 1, 1971, there were 1,076 dams and reservoirs subject to state jurisdiction. The estimated first costs of the dams exceeded one billion dollars, and combined storage capacity of the reservoirs exceeded 20 million acre-feet of water. Bulletins of the No. 17 series, "Dams Within Jurisdiction of the State of California", supply the name, location, type, size, age, and ownership of such dams, the maximum water storage elevation of their reservoirs, and their area of tributary drainage. An appendix lists dams in California owned or operated by federal agencies.

The State appreciates the cooperation extended by federal agencies in supplying data related to dams which those agencies own or operate. Data relating to dams under state jurisdiction were obtained from the applications and plans submitted by owners in compliance with California Water Code regulations. Field surveys and supplementary data from owners provided additional data.

The Department solicits from bulletin users their suggestions for additions or corrections to the data. These should be sent to:

Division of Safety of Dams  
Department of Water Resources  
P. O. Box 388  
Sacramento, California 95802

Reprints of "Statutes and Regulations Pertaining to Supervision of Dams and Reservoirs" will be sent, upon request, to those interested.

William R. Gianelli, Director  
Department of Water Resources  
The Resources Agency  
State of California

Slah & Buttress	8	6	2		2	3	2	1		6		2					
Crib	2		2			2				1					1		
Reinforced Conc Tank	11	9	1	1	9	2				5	2	4					
<b>TOTALS</b>	<b>1,076</b>	<b>623</b>	<b>348</b>	<b>104</b>	<b>226</b>	<b>480</b>	<b>214</b>	<b>118</b>	<b>35</b>	<b>208</b>	<b>74</b>	<b>374</b>	<b>149</b>	<b>151</b>	<b>49</b>	<b>53</b>	<b>18</b>

\*Includes dams for which volume is not known.

## EXPLANATION OF TABULATED DATA

Column headings introduce the following data:

**NAME OF DAM** -- as assigned by owner on original application, or as changed by owner in subsequent written correspondence of the Department of Water Resources.

**DAM NUMBER** -- as assigned by the Department of Water Resources.

**COUNTY** -- in which dam rises. Dams located in more than one county are listed under the county of alphabetical precedence.

**BREAM** -- on which dam rises as named by the owner on original application or as revised to conform with United States Geological Survey topographic maps.

**LOCATION** -- section, township, range, and base line and/or meridian, as used in "The System of Rectangular Surveys".

**TYPE** -- of main dam only.

**STORAGE CAPACITY** -- in acre-feet at the maximum water storage elevation, including dead storage.

**DRAINAGE AREA** -- in square miles. For onstream facilities, drainage areas less than 0.1 square mile are listed as 0.1 square mile.

**RESERVOIR AREA** -- in acres either at spillway crest elevation or, if headwater controls are used, at maximum water storage elevation.

**ELEVATION OF CREST** -- to nearest foot (U.S.G.S. datum, when available; otherwise approximate U.S.G.S. datum).

**CREST LENGTH** -- of main dam (excluding auxiliary dams) in feet.

**HEIGHT** -- in feet from dam crest elevation (excluding any parapet) to the lowest elevation of the outside limit of the dam.

**PERMANENT SPILLWAY** -- vertical distance in feet from dam crest to permanent spillway crest.

**MAXIMUM OPERATING LEVEL** -- where spillway crest controls are used, vertical distance in feet from dam crest to the maximum possible water storage elevation (top of gates or flashboards, etc.).

**CREST THICKNESS** -- in feet normal to the axis at the narrowest point.

**DAM VOLUME** -- in cubic yards of the principal material used for both main and auxiliary dams.

**YEAR COMPLETED** -- Date original construction completed.
