FOREWORD

The Department of Water Resources (DWR) as Watermaster for the Upper Los Angeles River Area (ULARA), submits this annual report as a comprehensive review of water supply conditions in ULARA during the 1973-74 water year. The report was prepared for the Superior Court in the County of Los Angeles, and for the parties to the ULARA Judgment, whose provisions authorize its publication.

ULARA is administered by DWR as a Watermaster Service Area in accordance with Part 4, Division 2, of the California Water Code. ULARA has been operated for six years under a well-defined management plan that limits and monitors ground water extractions.

This report contains information on ground water extractions, use of imported water, recharge operations, water quality conditions, a financial report on Watermaster Service during the 1973-74 fiscal year, and the tentative budget of the Watermaster for the 1975-76 fiscal year.

Jack J. Coe
District Engineer
Southern District
and Watermaster
Reg. C. E. No. 8075

I. INTRODUCTION

Upper Los Angeles River Area (ULARA) encompasses all of the watershed of the Los Angeles River and its tributaries above a point in the River designated as Los Angeles County Flood Control District (LACFCD) Gaging Station F-57C, northwesterly of the junction of the surface channels of the Los Angeles River and the Arroyo Seco (Plate 1). The entire area consists of 330,000 acres, comprising 123,000 acres of valley fill, referred to as the ground water basins, and 207,000 acres of hills and mountains. ULARA is bounded on the north by the Santa Susana Mountains and on the east by the San Rafael Hills which separate it from the San Gabriel Basin. To the south, the Santa Monica Mountains separate it from the Los Angeles Basin and to the west, lie the Simi Hills.

ULARA, as defined in the Judgment, has four distinct hydrologic ground water basins. The water supplies of these basins are separate and independent and are replenished by deep percolation from rainfall and from a portion of the water that is delivered for use within these basins and which returns to the ground water body. The four ground water basins in ULARA are the San Fernando, Sylmar, Verdugo, and Eagle Rock Basins (Plate 1).

The San Fernando Basin, the largest of the four basins, consists of 112,000 acres and comprises 90.8 percent of the total valley fill. It is bounded on the east and northeast by the San Rafael Hills and Verdugo Mountains; on the south by the Santa Monica Mountains; and on the northwest and west by the Santa Susana Mountains and Simi Hills.

The Sylmar Basin, in the northerly part of ULARA, consists of 5,600 acres and comprises 4.5 percent of the total valley fill. It is bounded on the north and east by the San Gabriel Mountains; to

the south it is divided by the eroded limb of the Little Tujunga syncline; and the topographic divide in the valley fill, lying between the Mission Hills and San Gabriel Mountains, divides it on the west.

The Verdugo Basin, north and east of the Verdugo Mountains in ULARA, consists of 4,400 acres and comprises 3.8 percent of the total valley fill. It is bounded on the north by the San Gabriel Mountains; on the east by the ground water divide between the Monk Hill Subarea of the Raymond Basin and the Verdugo Basin; on the southeast by the San Rafael Mountains; and on the south and southwest by Verdugo Mountains.

The Eagle Rock Basin, the smallest of the four basins, is in the extreme southeast corner of ULARA. It comprises 800 acres and consists of 0.6 percent of the total valley fill.

History of Adjudication

ULARA was established by the JUDGMENT AFTER TRIAL BY COURT in Superior Court Case No. 650,079, entitled The City of Los Angeles, A Municipal Corporation, Plaintiff, vs. City of San Fernando, et al., Defendants signed March 14, 1968 by the Honorable Edmund M. Moor, Judge of the Superior Court. Prior to the Judgment, numerous pretrials were held, subsequent to the filing of the action by the City of Los Angeles in 1955 and before the trial commenced on March 1, 1966.

On March 19, 1958, an Interim Order of Reference was entered by the Court directing the State Water Rights Board, now known as the State Water Resources Control Board (SWRCB), to study the availability of all public and private records, documents,

Watermaster Service

reports, and data relating to a proposed order of reference in the case. The Court subsequently entered on June 11 1958, an "Order of Reference to State Water Rights Board to Investigate and Report upon the Physical Facts (Section 2001, Water Code)".

A final Report of Referee was approved on July 27, 1962, and filed with the Court. The Report of Reference made a complete study of the geology, insofar as it affects the occurrence and movement of ground water, and the surface and ground water hydrology of the area. In addition, investigations were made of: the history of the horizontal and vertical location of the beds, banks and channels of the Los Angeles River and its tributaries; the areas, limits, and directions of flow of all ground water within the area; the quality of the ground water in the basins; all sources of water, whether they be diverted, extracted, or imported, etc. This was the basis for the Judgment.

The City of Los Angeles filed an appeal with the Court of Appeals which held a hearing on November 9, 1972, and issued its opinion on November 22, 1972. The opinion, prepared by Judge Compton and concurred by Judges Roth and Fleming, reversed, with direction, the original Judgment handed down by Judge Moor. In essence, the City of Los Angeles was given rights to all water within ULARA including the use of the underground basins. The defendants, however, were given the right to capture "return water", which is purchased MWD water that percolates into the basin.

A petition for rehearing was filed on December 7, 1972, but was denied by the Court of Appeals. On January 2, 1973, the defendants appealed to the State Supreme Court. The Court on March 2, 1973, advised the parties it would hear the case. A Court hearing was held on January 14, 1975, in which the plaintiff and defendants each were given one hour to present their oral arguments. A decision is expected by year's end.

Watermaster Service is administered by the Department of Water Resources (DWR) under Article 2, Chapter 2.5, Division 1 and Part 4, Division 2, of the California Water Code. Section 4025 authorizes DWR to form Watermaster Service Areas. Pursuant to Section 4026, such areas are created from time to time as rights to water are ascertained and determined. Particularly where ground water is concerned, such rights are usually ascertained or determined by court decree.

The first Watermaster Service Area was formed in September 1929 and the latest (ULARA) was formed on April 19, 1968. Currently, there are 20 such areas controlling surface water diversions in Northern California and four in Southern California controlling ground water use.

Under the Judgment, the Court appointed DWR as Watermaster to keep the Court fully advised in the premises, and to assist the Court in the administration and enforcement of the provisions of the Judgment.

A major task of the Watermaster in ULARA is that of monitoring ground water extractions. In accordance with the "General Information Policies and Procedures" of January 4, 1971, adopted by the Advisory Board, every ground water pumper reports his ground water extractions on a monthly basis on preprinted forms prepared and supplied by the Watermaster. This makes possible the updating of the water rights accounts (Watermaster Water Production Summary) by computing the amount pumped during the previous month, the total amount pumped to date and the amount that can be legally pumped during the remainder of the water year. A copy of the updated account is then mailed to the pumper each month.

The Watermaster's field staff performs water-meter tests to verify ground

water production reported by the parties when requested by any party to the Judgment or at the discretion of the Watermaster.

Defective or inaccurate water measuring devices must be repaired within 30 days after receiving written notice of the results of the test from the Watermaster. A number of well site investigations were made during 1973-74, and six meter tests were performed.

The Watermaster keeps the Court apprised of hydrologic conditions within ULARA by means of annual reports and on special occasions by correspondence directed to the Court, both of which are reviewed by the Advisory Board before submittal. In preparing the annual report, the Watermaster collects and reports all information affecting and relating to the water supply and disposal within ULARA. Such information includes the following items:

1. Water supply
 - a. Precipitation
 - b. Imported water
2. Water use and disposal
 - a. Extractions
 - (1) Used in valley fill area
 - (2) Exported from each basin
 - b. Water outflow
 - (1) Surface
 - (2) Subsurface
 - (3) Sewers
3. Water levels
4. Transfers of water rights
5. Watermaster administrative budgets and costs
6. Compliance and violation by any party in terms of the judgment
7. Ownership and locations of new wells

In addition to the above duties, the Watermaster also makes recommendations as he deems appropriate in connection

with the proper utilization of the water supply in the underground storage capacities of ULARA.

Advisory Board

Section X, Paragraph 5 of the ULARA Judgment established an Advisory Board for the purpose of advising the Watermaster in the administration of its duties. The duly appointed members of the Board, as of September 30, 1974, are:

City of Los Angeles

Duane L. Georgeson
Wells O. Abbott, Jr. (Alternate)
Bruce W. Kuebler
Melvin L. Blevins, Secretary
(Alternate)

City of Glendale

William H. Fell
Steven J. Meyerhofer (Alternate)

City of Burbank

Warren D. Hinchee
Martindale Kile, Jr. (Alternate)

City of San Fernando

Robert James, Chairman
Stuart E. Bergman (Alternate)

Crescenta Valley County Water District

Robert E. Blomquist
Robert K. Argenio (Alternate)

The Advisory Board may be convened by the Watermaster at any time in order to seek its advice. In addition, the Advisory Board is also responsible for reviewing with the Watermaster the proposed annual budget and annual report.

During the 1973-74 water year, the Advisory Board was convened twice, once on February 4, 1974, and once on September 19, 1974.

The meeting of February 4th was convened to discuss the following items:

1. Annual Report for 1972-73.
2. Budget for 1974-75.
3. Water Quality Report for ULARA.
4. Report from the Ad Hoc Committee of the Southern California Water Conference re: Ground Water Storage of State Water Project Supplies.
5. Progress report on abatement of gasoline pollution at Forest Lawn Cemetery.

The September 19th meeting was called to discuss the following items:

1. Further reports on the use of ULARA ground-water Basin for storing of surplus water from the State Water Project.
2. Annual report for 1973-74.
3. Requests for extension of time by parties to pump "Restricted Pumping Right" not pumped during the water year due to special problems.
4. Land Use Study of ULARA.
5. Appointment of Sub-Committee to investigate storage of water in ULARA from the State Water Project.

Summary of 1973-74 Operating Conditions

Rainfall in the valley fill area was almost normal (99 percent) and was 24 percent less than the year before. With the exception of 1972-73, the last five years have experienced below normal rainfall. Runoff decreased by 25 percent, reducing by 39 percent the amount of water conserved by LACFCD in its spreading basins.

Overall, extractions increased by 4 percent and were slightly above the combined Restricted Rights of the three basins. Ground water extractions in Sylmar and Verdugo Basins did not exceed the Restricted Rights therein. Imports were down by 1 percent (5,000 acre-feet), as were exports which decreased by 3 percent (6,500 acre-feet).

Water levels at key wells reflect a slight drop and stabilization of levels throughout most of the Basin. Levels had dropped since the early 1940's from 0-10 feet in Canoga Park to 140 to 160 feet in the area between Cities of Glendale and Burbank. Levels have not changed as drastically at the Narrows and Verdugo Basin. Sylmar Basin levels have dropped by 50-60 feet for the same period.

Water quality in the Basins range from good to excellent. Recent data show that quality changes appear to have stabilized in the eastern portion of the San Fernando Basin and slowed in the western. This does not apply to Verdugo and Sylmar Basins and the L.A. Narrows.

Seven parties exceeded their Restricted Pumping rights in 1973-74. Four of the seven parties were in violation as a result of having a zero water right or having a deficit carryover from 1972-73. The Watermaster approved overextraction and carryover in excess of permissible limits in four cases after having received the Advisory Board's concurrence.

The Watermaster processed eleven assignments of water rights in ULARA. Expenditures for Watermaster Service increased by \$5,000 and amounted to \$0.24 per acre-foot of ground water extracted.

Table 1 compares statistics for this period of record and the prior water year.

TABLE I. SUMMARY OF OPERATING CONDITIONS
1972-73 and 1973-74

Item	Water Year	
	1972-73	1973-74
Parties	27	27
Active pumpers	21	20
Active nonparties (within valley fill)	3	3
Restricted Pumping, in acre-feet	104,040	104,040
Watermaster expenses (fiscal year)	\$ 20,587.80	25,678.28
Watermaster expenses per acre-foot pumped	\$ 0.20	\$ 0.24
Valley rainfall, in inches	20.65	15.75
Spreading Operations, in acre-feet		
LACFCD	16,886	10,283
Los Angeles, City of	7,456	6,205
Extractions, in acre-feet	100,907	105,208
Imports, in acre-feet		
Colorado River water	5,394	6,606
Owens River water	449,105	441,843
Northern California water	21,878	22,884
Delivered to hill and mountain areas, in acre-feet	49,500	48,190
Exports, in acre-feet		
Owens River water	238,858	232,350
Sewage	110,651	110,173

II. WATER SUPPLY CONDITIONS

ULARA depends on many water sources to meet demand brought on by rapid growth of industry and population. At present, the water supply of ULARA consists of: precipitation on the watershed which includes portions of the San Gabriel, Verdugo, Santa Monica, and Santa Susana Mountains; ground water that is in storage in the four basins; imports from the Mono Basin-Owens River system; imports from the Colorado River; and water from northern California made available by the State Water Project.

Precipitation

ULARA has the climate of an interior coastal valley and is hotter in the summer and wetter in the winter than the coastal areas which have a Mediterranean type climate.

Precipitation varies considerably throughout ULARA, depending on topography and elevation. Mean seasonal precipitation ranges from about 14 inches at the western end of the San Fernando Valley to 35 inches in the San Gabriel Mountains. Approximately 80 percent of the annual rainfall occurs from December through March.

Precipitation in the valley and in the hills and mountains is evaluated separately. The valley is made up of the four ground water basins, whereas the hills and mountains comprise the remaining areas in ULARA. Precipitation in the hills and mountains is evaluated to relate the runoff from the watersheds of Big Tujunga, Pacoima Creek, and Sycamore Canyon, to the runoff records which are included in this report and also to evaluate the ground water recharge. (See Plate 2 for location of precipitation stations.)

The 1973-74 water year experienced below average rainfall. Rainfall in ULARA decreased to 17.95 inches, a drop of 5

inches from last year. On the average, about 15.75 inches of rain fell on the valley floor, whereas the mountains received approximately 19.93 inches. The 90-year (1881-1971) average precipitation for the valley and mountains is 16.45 and 21.35 inches, respectively.

Table 2 presents a record of rainfall at 22 key precipitation stations which were used to develop the 90-year average rainfall and are described in the Report of Referee.

Runoff and Outflow from ULARA

The drainage area of ULARA contains 329,137 acres, of which 205,709 acres are hills and mountains. The drainage system, in turn, is made up of the Los Angeles River and its tributaries. Surface flow in spring originates as: storm runoff from the hills and mountains; storm runoff

from the impervious areas of the valley; operational spills of imported water; industrial and sanitary waste discharges; and rising water.

Urbanization of the area has rapidly increased the flow discharge rates in much of ULARA and it is important to keep abreast of such change and its effect on the ground water basins.

A number of stream-gaging stations are maintained throughout ULARA, either by LACFCD or U.S. Geological Survey (USGS). The Watermaster has selected six key gaging stations which, in effect record major runoff from hydrologic areas in ULARA.

Table 3 summarizes the monthly flows for each gaging station and compares the 1972-73 water year with the 1973-74 year. The former was a very wet year and the latter below normal, as evidenced by the runoff quantities.

The records presented herein will keep the parties informed as to the magnitude of runoff from these various areas. The stations selected for this purpose are:

Station 57C registers all surface outflow from ULARA.

Station 118B registers all releases from Pacoima Dam that originate in Pacoima Canyon. Runoff below this point flows to the Lopez and Pacoima spreading grounds and on down to the Los Angeles River.

Station 168 registers all releases from Big Tujunga Dam, which collects runoff from Tujunga Canyon northeasterly of the Dam. Runoff below this point flows to Hansen Dam.

Station 252 registers flow from Verdugo Canyon plus flows from Dunsmore and Pickens Canyons.

Station E-285 registers flow from the westerly slopes of Verdugo Mountains and some flow east of Lankershim Boulevard. It also records any releases of reclaimed waste water discharged by the City of Burbank.

Station 300 registers all flow west of Lankershim Boulevard plus outflow from Hansen Dam that is not spread. These records also include releases from Sepulveda Dam, which may include extractions from Reseda Wells.

^{a/} Figures shown are rounded off; for details see Appendix C.

The locations of these key gaging stations are shown on Plate 2. The mean daily discharge rates for these six gaging stations during 1973-74 are summarized in Appendix C.

At the request of the Advisory Board, the Watermaster has attempted to compute the surface flow of the Los Angeles River at gaging station F-57C as to the sources, i.e., storm runoff from precipitation, Owens River water, rising water, or industrial and reclaimed waste water discharges. The Watermaster utilized the procedures outlined in the Report of Referee for estimating the approximate flow rates and sources of water passing gaging station F-57C. A similar request was made for station F-252. A summary of the procedures used follows and a tabulation of the computed flows is shown in Table 4.

The base low flows were separated from the surface runoff by the use of the hydrographs of Station F-57C. Base flows consist of rising water and industrial waste plus sewage. The separation of these two components is based on the following assumptions:

Rising water equals base low flow minus the sum of industrial waste and sewage. Industrial wastes are estimated from City of Los Angeles waste permits and the low flows in the Burbank-Western storm drain.

When the City of Los Angeles diverts water at the Headworks, all the rising water is diverted. When there is no diversion, all the rising water percolates upstream from Station F-57C.

The surface runoff obtained from the hydrographs of Station F-57C consists of net storm runoff and Owens River water. The separation of surface runoff into these two components is based on the following assumptions:

Net storm runoff equals surface runoff minus Owens River water.

If the Headworks diverts, all releases of Owens River waters are diverted to the Headworks spreading grounds. If the Headworks does not divert, all releases of Owens River waters are considered as passing station F-57C.

Ground Water Recharge

Local precipitation can have a marked influence on the ground water supply and water in storage. However, there is a wide variation in the annual amount of runoff as a result of changes in both precipitation and retentive characteristics of the watershed.

The accelerated urban development in ULARA has resulted in much of the rainfall being collected and routed into paved channels which discharge into the Los Angeles River and subsequently is carried out of the Basin. Plate 2 depicts the lined channels in ULARA.

To somewhat overcome the rapid outflow due to urbanization, Pacoima and Hansen Dam originally built for flood protection, are currently being utilized to regulate storm flows to recapture the

flow in spreading basins operated by LACFCD as well as the City of Los Angeles.

LACFCD operates the Branford, Hansen, Lopez, and Pacoima spreading grounds. The City of Los Angeles, in turn, operates the Tujunga and Headworks spreading grounds. Plate 2 shows the location of these spreading basins. The spreading grounds operated by LACFCD are utilized for spreading native water, whereas the spreading grounds operated by the City of Los Angeles are utilized to spread Owens River and native water, spillage from the Chatsworth Reservoir, ground water effluent, and the discharge from the Reseda wells. Table 5 summarizes the spreading operations for the 1973-74 water year.

+ Denotes insignificant amount.

Ground Water Table Elevations

During the 1973-74 water year, the Water-master collected and processed data to determine prevailing ground water conditions in ULARA during the spring and fall of 1974 (Plates 3 and 4). Data for lines of equal ground water elevation for Sylmar, Chatsworth, and Santa Monica foothills were obtained from the City of Los Angeles and for the remaining area, from LACFCD.

Change in ground water surface elevation from fall of 1973 to fall of 1974 as presented in Plate 5 reflects the effects of variations in spreading, ground water extractions, and rainfall.

The areas around Hansen, Pacoima, and Tujunga spreading basins show a drop in ground water elevation because of the decrease in the amount of water spread in 1973-74. On the other hand, the drop in water levels north of San Fernando and North Hollywood is attributed to the increase in ground water extractions. The same holds true for the Pollock Field, halfway between Glendale and Station F-57C, which has also resulted in a drop in water levels in that area. Curtailment in ground water extractions has resulted in a rise in water levels near Reseda, North Hollywood and the City of Burbank.

Figures 1 and 2 depict the water levels at key wells and Plate 2 shows their location.

Waste Water Reclamation

The reclamation of waste water can provide a relatively economical source of water for irrigation, industrial, recreational, and possibly, domestic use. Seven waste water treatment plants are in operation in ULARA, one is under construction and another is being considered (Plate 2). A tabulation of the operating waste water reclamation plants is shown in Table 6.

The Los Angeles-Glendale Waste Water Reclamation Plant project is currently

under construction. As of December 31, 1974, it was approximately 95 percent completed, with completion expected sometime in the late spring of 1975, and an on-line target date of summer 1975. Treatment capacity will be 20 million gallons per day (mgd), with 7.5 mgd for irrigation and fire protection, 2.5 mgd to the City of Glendale for its steam plant cooling water, and 10 mgd discharged into the Los Angeles River.

The design of the Sepulveda Basin Water Reclamation plant has been completed. It provides for an initial module of 40 mgd capacity, with treated effluent being used for recharge and irrigation of the Sepulveda Basin recreation area. The design allows expansion to an ultimate capacity of five modules of 40 mgd each. These would be constructed as future demand increased. At the beginning of calendar year 1975, the Los Angeles City Engineer's office reports that no schedule has been set for construction. The project will not proceed until the Environmental Protection Agency completes an assessment of facilities' needs and approval of State and Federal construction grants has been received.

Water Quality

Water resources management must take into account water quality in analyzing water supply factors. Water quality is in constant flux as a result of changes in the water supply environment. Monitoring changes in water quality is important because it serves as a measure of natural phenomena and the effectiveness of management plans.

Imported Water

- A. Owens River and Mono Basin water is of excellent quality, being sodium-calcium bicarbonate in character. Its total dissolved solids (TDS) averaged about 214 parts per million (ppm) for 30 years before 1969, the highest record being 322 ppm, on April 1, 1946, and the lowest, 149 ppm, on September 17, 1941. The three-year downward TDS trend which was reversed in 1972-73, continued in 1973-74.
- B. Colorado River water is predominately sodium-calcium sulfate in character, changing to sodium sulfate after treatment to reduce total hardness. Samples taken at the Burbank turnout between 1941 and 1973 indicated a TDS high of 875 ppm in August 1955 and a low of 625 ppm in April 1959. The average over the 32-year period is approximately 743 ppm.
- C. Northern California water is of sodium-calcium bicarbonate-chloride-sulfate in character. It generally contains less TDS and will be softer than local and Colorado River water. TDS averaged 322 ppm and hardness averaged 160 ppm during 1973-74, slightly better in quality than the prior year. Water quality should improve as storage in Castaic Reservoir is increased.

Surface Water

Surface runoff contains salts dissolved from rocks in the tributary areas. Surface water is calcium bicarbonate in character. In 1973-74, low flows above the Los Angeles Narrows had an average TDS content of 805 and a total hardness of 335 ppm.

Ground Water

The character of ground water from the major water-bearing formations is of two general types, each reflecting the composition of the surface runoff in the area. In the western part of ULARA, it is calcium sulfate in character, while in the eastern part, including Sylmar and Verdugo Basins, it is calcium bicarbonate. Ground water in ULARA is moderately hard to very hard.

Ground water is generally within the recommended limits of the USPHS Drinking Water Standards, except perhaps for wells in the western end of the valley having excess concentrations of sulfate and those in the lower part of the Verdugo Basin having abnormally high concentrations of nitrate.

Water quality studies indicate that, except for short periods, the quality of imported water from Owens River and Mono Basin and northern California is superior to local water. Representative mineral analyses of imported, surface, and ground waters for 1973-74 are contained in Table 7. A comparison of the various water sources as to TDS, sulfate, and chloride content is shown in Figure 3. (Note: Records for water from the State Water Project are shown on a monthly basis since use commenced in May of 1972.)

City of Los Angeles' water quality data indicate that the long term trend of increasing TDS in groundwater has changed significantly since the inception of

Watermaster management. Water quality changes appear to have stabilized in the eastern portion at the San Fernando Basin and slowed in the western portion.

Figure 3-TOTAL DISSOLVED SOLIDS, SULFATE , AND CHLORIDE OF WATER SOURCES IN ULARA

Figure 3(Cont.) - TOTAL DISSOLVED SOLIDS, SULFATE, AND CHLORIDE OF WATER SOURCES IN ULARA

Ground Water Contamination by Gasoline

During the 1973-74 water year, progress continued toward abating gasoline pollution near Forest Lawn Cemetery. (The history of this major water quality problem was described in the 1968-69 and 1969-70 Watermaster reports.)

The Western Oil and Gas Association (WOGA) has continued its efforts to abate the pollution. California Regional Water Quality Control Board (CRWQCB), Los Angeles Region, and SWRCB are playing leading roles in ensuring effective, expeditious abatement. DWR has advised the Boards regarding the technical aspects of abatement; and the City of Los Angeles' Department of Water and Power (LADWP) and WOGA have effectively monitored the polluted area.

Seven progress reports have been submitted to WOGA to CRWQCB, Los Angeles Region, the most recent describing progress to date.^{1/} Locations and other features currently related to the monitoring and pumping programs are shown in Figure 4. The cleanup program was discussed in the Watermaster's 1971-72 report.

Plans were initiated in 1972-73 to reduce the number of wells being pumped and monitored, and 8 have been destroyed in 1973-74 with the approval of CRWQCB, Los Angeles Region (Appendix D).

The monitoring situation as of July 1, 1974 is summarized as follows: There was no measurable free gasoline in any wells during May and June. Slight traces of liquid gasoline (too thin to measure on the testing tape) were observed about half the time at W-4 and

^{1/} "Seventh Progress Report to Los Angeles Regional Water Quality Control Board on Amelioration of Ground Water Contamination by Gasoline near San Fernando Road in Glendale and Los Angeles". July 1, 1974.

W-53; and on every day tested in the upper part of FL-4. Faint traces also occurred occasionally in W-3, W-37, W-48, W-52, and W-63; but for most of the time those wells exhibited only a slight gasoline odor, as did W-2, W-35, W-47, W-50, W-51, and W-63. All other monitored wells were free of gasoline odor.

Traces of free gasoline began to appear in W-54 on August 14, 1973, although there had been no measurable gasoline in this well since October 4, 1970. By bailing, skimming, pumping, and eventually establishing gradients from W-54 toward W-37 and W-53, the free gasoline and traces of gasoline in W-54 were removed in mid-April and the well was plugged on April 30, 1974.

When tests for hydrocarbons have shown a continuing good quality of water from Forest Lawn wells arrangements have been made to return these wells to service. On June 13, 1973, FL-2 was returned to Forest Lawn control and has been used in its system every month since then. Negotiations are now under way to return to service FL-3 and FL-6, inasmuch as hydrocarbon analyses for the past several months show that water has acceptable good quality.

In an attempt to accelerate final cleanup of pellicular gasoline by aerobic biodegradation, compressed air has been injected for most of the past six months (and longer) into W-32, W-35, W-47, W-48, and HD. The air is bubbled through a hose below the water surface, but the well is not put under any pressure. Air has also been injected periodically by a hand pump into wells 28, 29, 30, 45, 46, 57, and 60 in an attempt to stimulate bacterial activity.

For the period from January 1 to June 30, 1974, WOGA has continued to pursue the four objectives established by

CRWQCB, viz, to monitor the areal extent of gasoline contamination, to remove any free gasoline that might occur, to contain the spread of gasoline and its vapors, and to attempt to accelerate the final cleanup. The first three objectives have been well attained and work continues on the fourth. Indeed, the general situation was better in mid-1974 than it had been at any time since cleanup commenced.

The general cleanup program is continuing with wells being monitored in compliance with directives from the staff of the Regional Board. Several wells have been plugged and sealed as authorized by the staff and requests for permission to seal other wells not needed for monitoring have been submitted.

DEPARTMENT OF WATER RESOURCES, SOUTHERN DISTRICT, 1975

III. WATER USE AND DISPOSAL

Water delivered for use in ULARA is either imported water, local ground water, local surface diversions, or a mixture, depending on the area and water system operation. During the 1973-74 water year, water purveyors in ULARA served approximately 344,000 acre-feet to their customers. Of this total, approximately 105,000 acre-feet were extracted and the remaining 239,000 acre-feet were imported. The Basin contains 557 wells, of which 171 are active and 386 are observation, test, capped, etc. Five wells were drilled and 15 were destroyed in 1973-74 (Appendix D).

The adjudication of ground water rights in ULARA restricted all ground water extractions, effective October 1, 1968. On that date, extractions were restricted to approximately 104,000 acre-feet per water year. This amounted to a reduction of approximately 50,000 acre-feet below the previous 6-year average.

Under the Judgment, no determination was made regarding overdraft or surplus in the Eagle Rock Basin. Therefore, no restrictions on ground water extractions have been imposed on that Basin.

Except for the Sparkletts Drinking Water Corporation and Deep Rock Water Company, there are no parties to the Judgment that extract water from Eagle Rock Basin. The safe yield of the Basin, under 1964-65 conditions, was set at 70 acre-feet.

The restriction on ground water extractions has been a great factor in the increase of imported water to ULARA during the past five years.

Figure 5 illustrates the annual ground water extractions and total water im-

ported in ULARA, beginning with the 1944-45 water year. Note the change from 1968-69 through 1973-74.

It can also be noted that for 10 years before pumping was restricted, imports exceeded extractions by from 50,000 to 60,000 acre-feet per year and that for the six water years, 1968-69 - 1973-74, the difference jumped to between 120,000 and 160,000 acre-feet. Due to restricted pumping in ULARA, any substantial increase in water demand in the future will show an increase of imports only.

Figure 6 provides an analysis of the monthly relationship between rainfall, ground water extractions, and imported supply. Data relates to all of ULARA and not to any one specific ground water basin therein. The precipitation values were obtained from stations on the valley floor (Table 1).

Ground Water Extractions

On April 26, 1968, the Watermaster wrote to all parties known to be active that ground water extractions in ULARA would be reduced and controlled by him. Control would be in accordance with the Judgment, which limits the amount of ground water each party can extract annually from each of the separate basins to an amount referred to as "Restricted Pumping".

Table 8 presents a balance sheet which summarizes each party's water account by listing its Restricted Pumping allowable carryover from 1972-73; (see Appendix A for changes); any additional allowable pumping as the result of a water

^{e/} Includes 282.82 acre-feet, authorized by the Advisory Board and Watermaster.
^{f/} Includes 1,598.59 acre-feet, authorized by the Advisory Board and Watermaster. See Chapter IV.
^{g/} Includes year-end balance of parties to Stipulated Judgments.
^{h/} Excludes extractions from Reeds Wells which totaled 181.49 acre-feet and 4,659.60 acre-feet authorized by the Advisory Board and Watermaster pursuant to the "Stipulation for Emergency Spreading and Extraction". See Chapter IV.
^{i/} Amount to be returned to basin by spreading imported water or foregoing right to extract water or by combination of both.
^{j/} See footnote (h).
^{k/} Allowable carryover by special Watermaster authorization. Amount to be extracted in following two years. See Chapter IV of this report for details.

right assignment; amount of ground water extracted during the 1973-74 water year; and the amount that can be carried forward to the succeeding water year.

To provide flexibility in the control of ground water extractions, the Judgment contains various provisions which allow parties to carry over into the succeeding water year a portion of their unused water right and, in some cases, to overextract. This flexibility clause was provided to assist the parties in meeting unforeseen emergencies in water demands. One provision allows parties to carry over from one water year to another any unused Restricted Pumping up to an amount not to exceed 10 percent of their Restricted Pumping.

The flexibility clause also allows parties to overextract up to an amount equal to 10 percent of their Restricted Pumping. However, any overextraction will be deducted from the Restricted Pumping in the succeeding water year. Chapter IV contains additional information on this provision.

In addition to the flexibility clause, the City of San Fernando is allowed, by the Judgment, to exceed its assigned Restricted Pumping in Sylmar Basin. The additional allowance for the City of San Fernando is described in the Judgment as "Physical Solution-Sylmar Basin". This provision allows the City of San Fernando to extract up to 850 acre-feet of water per year in addition to the amount that it has received under its Restricted Pumping. If the City of San Fernando takes, diverts, or extracts water in addition to its Restricted Pumping, it must immediately notify the City of Los Angeles and the Watermaster in writing, and the City of Los Angeles must reduce its extractions in an amount equal to the amount that the City of San Fernando has exceeded its rights. Chapter IV describes the 1973-74 operation.

The Judgment, in Section IV, also allows various parties to divert and extract water from the San Fernando Basin in accordance with the terms and conditions of the stipulated Judgments between the City of Los Angeles and said parties (Case No. 650,079). The City of Los Angeles, in turn, shall deduct from its Restricted Pumping for each year the aggregate amount of water extracted pursuant to the separate stipulated Judgments.

At the commencement of each water year, the City of Los Angeles advises the Watermaster of the estimated amount of water each party to the stipulated Judgments will pump during the water year (Appendix A). The City then reduces its extractions in the San Fernando Basin in an amount equal to the estimates. For each subsequent year, the City of Los Angeles will reduce its extractions by the amount of water that said stipulated parties' extractions exceeded the estimates for the preceding year. Should the stipulated parties' extractions be less than the estimate for that year, the City of Los Angeles may increase its extractions by that amount in the next succeeding year.

The February 1971 earthquake resulted in such heavy damage to the City of San Fernando's water facilities and the City of Los Angeles' terminal storage complex at Van Norman Reservoir that changes in allowable ground water extractions for these two parties were required. As a result, the City of Los Angeles was allowed to exceed its Restricted Pumping in the San Fernando Basin pursuant to the "Stipulation for Emergency Spreading and Extraction" (Appendix A, 1970-71 report). Table 8 shows a separate accounting of this item. The City of San Fernando, in turn, was allowed to extract the unused 1970-71 water right balance of 1,526.06 acre-feet in the ensuing

three water years. A further explanation of this authorization and extension is discussed in Chapter IV.

The metered ground water production from each active well is listed by basin and by party in Appendix B, Table B-1. This tabulation presents the total ground water production as reported by each party. Plates 6 and 7 depict the service area wherein each party delivers its water supply.

Extractions by Nonparties

In order to keep the parties and the Court apprised of all the ground water extractions within ULARA, the Watermaster has attempted to collect information on nonparty ground water extractions.

A nonparty is an entity which was not named in the ULARA water right suit. These nonparties and parties which were dismissed by the court do not come under the jurisdiction of the Watermaster.

To the best of the Watermaster's knowledge, WOGA, The Metropolitan Water District of Southern California (MWD), and Glen A. Berry are the only nonparties extracting ground water in ULARA.

No report on ground water extractions is made as to the parties dismissed from the action: Glenhaven Memorial Park, Incorporated; Los Angeles County Waterworks District No. 21, etc., which are still active pumpers in the hill and mountain areas of ULARA.

Ground water extracted by MWD and WOGA is also shown in Table B-1. Extractions by Glen A. Berry are estimated at 3 acre-feet per year (see Chapter IV) and are not shown in Table B-1.

Water Wells in ULARA

The Report of Referee described the wells in ULARA according to a number-

location identification system devised by the Los Angeles County Flood Control District. However, the Watermaster has redesignated the wells in accordance with his recording system.

A State Well Numbering system was adopted by the State several years ago that utilizes the U. S. Public Land Survey System. A graphical illustration and description of the coding system in ULARA is shown in Figure 7.

Each water well in ULARA was assigned a State Well Number to simplify the administration of the Judgment and the monitoring of ground water extractions. A cross-index between State Well Numbers and county numbers was completed in March 1972 and made available to all interested parties.

Plate 2 on page 17 shows the location of all wells (party and nonparty) known to be in existence by the Watermaster as of September 30, 1974. The wells are plotted and coded in accordance with the above procedure and that shown in Figure 7.

Wells reported to the Watermaster as having been drilled or destroyed in 1973-74 are listed in Appendix D.

As a matter of course, the Watermaster locates all new wells by survey and assigns a new State Well Number. The parties that submit detailed information as to the location of the well will preclude the Watermaster's requirement for a survey. Each party is required to notify the Watermaster whenever a new well is drilled or a well is destroyed.

State well numbers that identify each water well in ULARA are derived from a system based on the U.S. Public Land Survey. Each number consists of township and range designation, a section number, a letter representing the 40-acre tract in which the well is situated, a sequence number indicating the chronological order in which the well number was assigned, and a letter

representing the base and meridian. The last letter is frequently omitted from well numbers in a single area because all wells there share a single base and meridian. Well numbers are assigned by the Watermaster.

The components of well No. 1N/14W-12C03S, for example, are identified in the following breakdown:

Township	Range	Section	Tract	Sequence number	Base and meridian
<u>1N</u>	<u>14W</u>	<u>12</u>	<u>C</u>	<u>03</u>	<u>S</u>

The derivation of the components is illustrated below:

Imports and Exports of Water

Residential, commercial, and industrial expansion in ULARA requires the importation of additional water supplies to supplement that provided by the ground water basins. The City of Los Angeles and MWD have kept abreast of this demand by continuing to expand their facilities for the importation of water.

The City of Los Angeles now has a second aqueduct capable of bringing in an additional supply of Owens River and Mono Basin water at the rate of more than 130 million gallons a day.

In addition to the City's aqueducts, MWD's Colorado River aqueduct delivers water to the Cities of Burbank, Glendale, Los Angeles, and San Fernando. On November 9, 1971, by unanimous approval of a resolution by MWD's Board of Directors, the City of San Fernando became a member agency of MWD. Thus, San Fernando can now obtain supplemental water on a permanent basis from MWD supplies and participate in all programs for the future development and distribution of such water.

The Crescenta Valley County Water District and La Canada Irrigation District also import Colorado River water through the facilities of the Foothill Municipal Water District, which is a member agency of MWD.

The State Water Project now delivers water from northern California to MWD at Castaic Reservoir, thence through the MWD Foothill Feeder to the Joseph Jensen Water Filtration Plant in ULARA.

Exports from ULARA, exclusive of sewage, are limited to the City of Los Angeles, which exports imported and ground water. Table 9 summarizes the nontributary imports and exports from ULARA. Ground water imports and exports in and out of ULARA are listed in Table 10.

Facilities for importing nontributary water are depicted on Plate 6, Page 43.

The 54-inch Calabasas Feeder from Chatsworth to Calabasas was completed during 1973-74. In addition, the 18-foot San Fernando Tunnel was completely excavated and is being prepared for tunnel-concreting operations.

Physical Data by Basins

To comply with the Court's directive, the Watermaster has collected and summarized data in Table 10 which show the water supply and disposal in each of the basins.

The information for Table 10 was submitted by the parties. In instances where estimates were made, such as water delivered to hill and mountain areas, sewage exported, etc., estimates were made by the parties and based upon methods consistent with previous estimates computed by SWRCB for the San Fernando Valley Reference. The Watermaster likewise made computations of subsurface outflows based on similar computations made by SWRCB.

Some of the figures submitted for Table 10 are partially estimated, due to lack of information at the time of submittal. However, the actual figures based on measured values are subsequently submitted to the Watermaster for his permanent records. The revised data are available from the Watermaster on request.

- a/ Excludes production from Reseda wells which amounted to 181 acre-feet.
- b/ Excludes production of 521 acre-feet by Western Oil and Gas Association (nonparty).
- c/ Measured at Station F-57C where the 29-year mean (1929-57) base low flow is 7,580 acre-feet.
- d/ Includes reclaimed waste water which infiltrates into the ground water basin after being discharged in L.A. River and while on route to gaging station F-57C.
- e/ Excludes 473 acre-feet of water from San Fernando Tunnel which is being built by MWD.
- f/ Surface outflow is not measured. Calculated average surface outflow by Mr. Lavery - SF Exhibit 57.
- g/ Information obtained from Station F-252R.
- h/ Based on 29-year average (1929-57).
- i/ Information not available.
- j/ Estimated in Supplemental No. 2 to Report of Referee for dry years 1960-61. Currently, data not available for direct evaluation.

IV. ADMINISTRATION OF THE JUDGMENT

The Department of Water Resources, as Watermaster of ULARA, administers the Judgment and keeps the Court fully apprised of any violations or changes in administration.

Assignments of Restricted Pumping

In accordance with the provisions of the Judgment, the Watermaster records all changes of ownership, transfer, or assignment of Restricted Pumping rights. Table 11 lists all assignments, parties, and amounts involved. Appendix A records the documents used to assign Restricted Pumping rights by each of the parties as of September 30,

1974. During the 1973-74 water year, the City of Los Angeles submitted estimates on the amounts to be extracted by those parties having separate stipulated Judgments with the City. The clause that allows the parties with stipulated Judgments to extract ground water under the City of Los Angeles' Restricted Pumping right is covered by Section V, Paragraph 2 of the Judgment. The City of San Fernando did not exercise its right to purchase water from the City pursuant to the "Physical Solution-Sylmar Basin", which is described in Section VII, Paragraph 2 of the Judgment.

TABLE 11. ASSIGNMENTS OF RESTRICTED PUMPING

^{a/} Estimate submitted by City of Los Angeles, see Appendix A.

^{b/} License shown in Appendix A for the water years 1972-73 and 1973-74 was inadvertently omitted from the 1972-73 annual report.

In addition to the Cities of Los Angeles and San Fernando, a number of parties availed themselves of the opportunity to license water rights to meet their water demand.

In order that a water right license or sale agreement be in force during the water year, it will be the Watermaster's policy that it be signed before or during the water year in question. Failure to submit a license or sale document to the Watermaster by August 31 of the water year in question may be considered evidence that such an agreement was never consummated during such water year.

Overextractions

In restricting ground water extractions in ULARA, it was foreseen that there would be unavoidable fluctuations in water use occurring from year to year. Therefore, the flexibility clause was

included in the Judgment allowing each party to vary its extractions within reasonable limits so that it could pump more or less than its Restricted Pumping with equivalent debits or credits being applied to its extractions in the subsequent water year.

The provisions of Section VIII of the Judgment allows each party a flexibility of 10 percent of its Restricted Pumping right. In other words, a party may underpump or overpump by 10 percent of its Restricted Pumping and in the succeeding water year increase or decrease (whichever is applicable) its pumping by the same amount. Table 12 summarizes all overextractions and violations of the Judgment.

Of the 8 parties that exceeded their allowable extractions for 1973-74, four were in violation of the Judgment.

a/ Refer to Column (1)-(3), Table 8.
b/ Computed as 10 percent of Column (1) unless otherwise noted.
c/ Party entitled to extract ground water per Stipulated Judgment with City of Los Angeles. The City will, in succeeding water year, decrease its extractions by the amount of the overextraction shown under Column (5).
d/ Includes 978.92 acre-feet overextracted in 1970-71 pursuant to "Stipulation for Emergency Spreading and Extraction".
e/ Includes 4,659.60 acre-feet overextracted pursuant to "Stipulation for Emergency Spreading and Extraction".
f/ Not to be considered an overextraction per se, as the "Stipulation for Emergency Spreading and Extraction" permitted the City of Los Angeles to overextract.
g/ For City of Los Angeles, the allowable overextraction is 10 percent of its Restricted Pumping shown in Column (1) of Table 8.
h/ Party in violation of the Judgment as it has a zero water right or Restricted Pumping.

The parties in violation are subject to possible court action. Recommendations are discussed under "Findings, Determinations, and Recommendations by the Watermaster."

Table 12 also lists Conrock Company a party that is subject to a Stipulated Judgment with the City of Los Angeles. This party's extraction, in excess of the estimate submitted by the City, will be adjusted against the City's Restricted Rumping right during the 1974-75 water year. As such, the party in question is not considered to be in violation of the Judgment.

Findings, Determinations, and Recommendations by the Watermaster

The Watermaster finds four parties in violation of the Judgment as a result of overextractions during the 1973-74 water year. The parties in violation are John and Barbara Mena, Monteria Lake Association, Charles T. Brown, and The Church of Jesus Christ of Latter-Day Saints. All four parties have zero water rights.

John and Barbara Mena extract approximately 1 acre-foot a year for domestic purposes; they have not been requested by the Watermaster to lease water rights to make up their overextractions; however, since their accumulated carry-over deficit is now approximately 5 acre-feet, it would be desirable that they lease sufficient water rights during the 1974-75 water year to offset the deficit.

Monteria Lake Association has not extracted any water since the 1968-69 water year; however, the Association's account continues to show an accumulated carryover deficit since they have not leased any water rights to offset the accumulated overextractions. They were advised on March 5, 1971 that they eliminate their deficit; to date the Association has not taken any action. Therefore: THE WATERMASTER

DOES HEREBY RECOMMEND THAT THE COURT TAKE ACTION AGAINST MONTERIA LAKE ASSOCIATION FOR NONCOMPLIANCE.

Charles T. Brown's overextraction was an inadvertent action since he had assumed he had an ongoing lease. He has now taken action to lease sufficient rights to cover the overextraction and his 1974-75 water needs. The Watermaster recommends no action be brought against Charles T. Brown.

The Church of Jesus Christ of Latter-Day Saints did not report any extractions of ground water during 1973-74 and did not appear to make any effort to eliminate its accumulated overextractions. At the conclusion of the 1971-72 water year, it was advised by the Watermaster of the considerably large amount of overextraction and was asked to please advise the Watermaster what action it would take to correct the cited deficiency. As of January 15, 1975, no notification has been received by the Watermaster. Therefore: THE WATERMASTER DOES HEREBY RECOMMEND THAT THE COURT TAKE ACTION AGAINST THE CHURCH OF JESUS CHRIST OF LATTER-DAY SAINTS FOR NONCOMPLIANCE.

During the 1970-71 water year, the City of Los Angeles extracted a total of 2,055.92 acre-feet in accordance with the provisions of the "Stipulation for Emergency Spreading and Extractions", which was entered into by parties of ULARA as a result of the February 9, 1971 earthquake.

A total of 1,077.00 acre-feet of Owens River water was spread during the 1970-71 water year to return to the ground water basin a portion of the water previously extracted. This left 978.92 acre-feet remaining to be returned (see Table 8). Owens River water was not available for

spreading during the 1973-74 water year. Thus, the amount of water remaining to be paid back remains the same (978.92 acre-feet).

On February 26, 1974, the City had to shut down completely the First Los Angeles Aqueduct in order to repair 65 feet of tunnel sidewall and 315 feet of invert which had extensive cracking and breaking. The area affected was between Elsmere and City Limits Canyons. The repair work, which extended over a 37-day shut-down of the Aqueduct, was completed and the First Aqueduct went back into service on April 4, 1974.

During the February 26 to April 4, outage, the City had to depend on its ground water to meet water demand and requested the Watermaster to permit it to extract under an emergency condition pursuant to the provisions of the Stipulation for Emergency Spreading and Extraction. The Watermaster gave tentative approval on April 15, 1974, based on the City's report on the First Aqueduct's failure and an inspection of the damage. The Watermaster's approval was contingent on the ULARA Advisory Board's approval.

The ULARA Advisory Board met on September 19 to take under submission the City of Los Angeles' request. It recommended approval. Accordingly, the City's extraction of 4,659.60 acre-feet was charged to a special account pursuant to the Stipulation for Emergency Spreading and Extraction. As of September 30, 1974, the City had 5,638.52 acre-feet under the special account, all subject to repayment by either spreading or curtailment of ground water extraction in future years. Although no repayment was made during 1973-74 for water used under those provisions, the City started to spread imported water on December 19, 1974 to offset a portion of the water used under this special account.

(A copy of the Stipulation for Emergency Spreading and Extraction is shown in Appendix A of the 1970-71 Watermaster report.)

During the February 4 ULARA Advisory Board meeting, a motion was approved for the City of San Fernando to be allowed to extract its unused water right during the subsequent three water years. The Watermaster concurred in view of the emergency resulting from the 1971 earthquake, which prevented the City from pumping its share of ground water from the Sylmar Basin.

The Watermaster subsequently approved, subject to the continuing jurisdiction of the Court, the City of San Fernando's allowable carryover of extraction during the three subsequent water years, amounting to the 1,526.06 acre-feet it was unable to use in 1970-71. During the 1971-72 and 1972-73 water years, the City extracted 288.43 and 227.11 acre-feet of carryover, respectively, leaving 1,010.52 acre-feet which it could have extracted during the 1973-74 water year. On September 5, 1974, the City asked for an additional extension of two years through the 1975-76 water year to complete the extraction of its water right entitlement, since it could not fully utilize it in 1973-74.

That request was submitted to the Advisory Board on September 19, and was approved. The Watermaster has therefore extended the 1973-74 balance of 684.66 acre-feet to be used during the water years 1974-75 and 1975-76.

On July 16, 1974, the Forest Lawn Memorial Park Association also asked for an extension so that it might fully utilize its 1973-74 year-end balance of 400 acre-feet during the

next water year. The Association was unable to extract its full water right in 1973-74 because of its continuing inability to use its ground-water pumping system which had been drastically curtailed due to gasoline contamination of the ground water basin. The Advisory Board approved the request on September 19, and the Watermaster allowed the Association to carryover its water right in excess of the permissible 10 percent (Table 8).

On August 9, 1974, the City of Glendale requested the Watermaster to grant it an extension so it could pump an estimated 1,680 acre-feet that it had been unable to pump, due to delays caused by major repairs of the water supply pumping units, which resulted from the unavailability of parts. The Watermaster studied the City's problems and reported on them at the September 19 ULARA Advisory Board meeting. The Board recommended approval and Table 8 shows a carryover for the City of Glendale into 1974-75 in excess of the 10 percent permitted by the Judgment. Information about the Watermaster's study can be obtained in his office.

As mentioned in Chapter III, to the best of the Watermaster's knowledge and information on hand, Glen A. Berry, WOGA, and MWD are the only nonparties extracting ground water in the three ground water basins. The Watermaster has approved the latter two operations which are necessary for the control of gasoline pollution at Forest Lawn and the construction of the San Fernando Tunnel of the MWD Foothill Feeder.

Glen A. Berry drilled a well at his residence in Chatsworth on March 3, 1972, and is currently extracting ground water for his lawns, shrubs, and trees. He was informed on June 20, 1972 of the ULARA Judgment, which restricts ground water use in ULARA and places the use thereof under the Court's jurisdiction. The Watermaster has not tested the well capacity and at this time estimates the water use at approximately 3 acre-feet per year, based on water use of 2.8 acre-feet per acre per year used for lawns and shrubs.

V. ADMINISTRATIVE COSTS

ULARA was established as a "Watermaster Service Area" in accordance with Part 4, Division 2, of the California Water Code. Pursuant to the provisions of its Section 4201, the cost of Watermaster Service is payable one-half by the State and one-half by the parties. Thus, the parties are assisted by the State in distributing the water economically.

On the other hand, the Judgment describes the procedures for apportioning the costs among the parties and how it should be collected. It requires that each year the Watermaster prepare a tentative budget covering the forthcoming July 1 to June 30 fiscal year. (Watermaster Service and the annual report are on a water year basis, i.e., October 1 through September 30.)

The Judgment also provides that the parties' share of the budget be borne by each party in the proportion that its "Mutual Prescriptive Right" bears to the total "Mutual Prescriptive Right" of all parties in ULARA. However, no party having 50 acre-feet or less of "Mutual Prescriptive Right" shall be assessed any charges.

The Watermaster is required to include the tentative budget and its apportionment in the annual report, so that it may be reviewed and approved by the Advisory Board on or about February 1 of each year. The tentative budget is subsequently mailed to the parties as part of the annual report on or before March 1 of each year. If there are any objections to the budget, they must be presented in writing to the Court and to the Watermaster within 30 days (on or before March 31) after the mailing of the annual report. If no objections are received, the budget becomes final.

Invoices are mailed on or about April 1 and all payments must be received,

whether objections are filed or not, within 60 days (on or before May 1) after mailing of the annual report.

Approved Budget for 1973-74

In accordance with the Judgment, the Watermaster submitted a budget for the fiscal year July 1, 1973 through June 30, 1974 as part of its 1971-72 annual report. The tentative budget and annual report were reviewed and approved by the Advisory Board on February 5, 1973.

The parties had 30 days after the mailing of the annual report to submit their objections to the tentative budget. No objections were received by March 31, 1973 and the budget became final. Table 13 presents the 1973-74 budget as approved by the Advisory Board and parties.

TABLE 13. APPROVED BUDGET FOR 1973-74

ULARA Watermaster Service Area	
Salaries and wages	\$17,304

By <u>Robert James</u> Robert James Chairman	By <u>James J. Doody</u> James J. Doody District Engineer Southern District and Watermaster
Date <u>Feb. 5, 1973</u>	Date <u>JAN 19 1973</u>

Invoices for each party's proportionate share of the budget were mailed on or about April 1 and all payments were received prior to the deadline of May 1, 1973. Each party's proportionate share of the 1973-74 budget is shown in Table 14. A recapitulation for the Cities of Glendale and Los Angeles is made since they are billed in two separate basins.

During the sixth year of Watermaster Service, the work load increased slightly. As a result, the expenditures in 1973-74 were higher when compared with the 1972-73 fiscal year.

Income and expenditures for Watermaster Service during the 1973-74 fiscal year are shown in Table 15. In accordance with the California Water Code, any credit or debit balance remaining at the end of the fiscal year is carried forward into the succeeding fiscal year. The parties' share of the

carryover into the 1974-75 fiscal year totaled \$2,966.00.

Approved Budget for 1974-75

Tentative Budget for 1975-76

The tentative budget for the fiscal year July 1, 1974, through June 30, 1975, was submitted by the Watermaster for review and approval by the Advisory Board on February 4, 1974. The parties had 30 days after the mailing of the annual report for submitting their objections to the 1974-75 budget which was made a part of the report.

No objections were received by March 31, 1974, and the budget became final. Invoices for each party's proportionate share of the budget were mailed on April 1 and all payments were made before May 1, 1974. Table 16 presents the 1974-75 budget as approved by the Advisory Board on February 4, 1974. Each Party's share of the 1974-75 budget is shown in Table 17.

In accordance with the Judgment, the Watermaster hereby submits a budget for the fiscal year July 1, 1975 through June 30, 1976. The tentative budget submitted herewith was reviewed and approved by the Advisory Board on February 3, 1975. The parties will have 30 days after the mailing of the annual report for submitting their objections to this budget.

If no objections are received by March 31, 1975, the budget will become final. Invoices for each party's proportionate share of the budget will be mailed on or about April 1 and payments will be due on or before May 1, 1975. Table 18 presents the 1975-76 budget as approved by the Advisory Board. Each party's share of the 1975-76 budget is shown in Table 19.

COPIES OF LEGAL DOCUMENTS, TRANSFERS OF RESTRICTED PUMPING

WATER USE LICENSE AGREEMENT

UPPER LOS ANGELES RIVER AREA (ULTRA)
REDUCTION OF LIMITATIONS BY CITY OF
LOS ANGELES
October 1, 1973

ELLEN S. DUBOIS and WILLIAM O. BARTHOLOMAUS (hereinafter referred to as "Licensors") hereby grant to CITY OF BURBANK, a municipal corporation, (hereinafter referred to as "Licensee") a license to extract fifteen (15) acre-feet of water of Licensee's Restricted Pumping allocated to Licensee under and pursuant to Judgment dated March 14, 1968, and entered in Los Angeles Superior Court, Case Number 850 079, entitled "The City of Los Angeles, Plaintiff, vs. City of San Fernando, et al., Defendants," during the period commencing October 1, 1973, and continuing to and including September 30, 1976.

Said License is granted subject to the following conditions:

- 1) Licensee shall exercise said rights and extract the same on behalf of Licensee during the period above specified and put the same to beneficial use, and Licensee shall not by the exercise hereunder of said right acquire any right to extract water independent of the rights of Licensee.
- 2) Licensee shall notify the watermaster that said pumping was done pursuant to this License and provide the watermaster with a copy of this License.
- 3) Licensee shall note, in any recording of water production for the period of this License, that said pumping was done pursuant to this License.
- 4) Licensee warrant that they have fifteen (15) acre-feet of Restricted Pumping and that they have not pumped and will not pump or permit or license any other person to pump any part of the fifteen (15) acre-feet granted by this License during the period of October 1, 1973, through September 30, 1976.

This License is entered into as of the 29th day of August, 1974.

WATER LICENSE AGREEMENT

FOREST LAWN COMPANY (Licensor) grants to CECILIA DE WELLS SHAPES, (Licensee) a license to extract 6 acre-feet of Licensor's Restricted Pumping allocated to Licensor (or predecessor in interest) under and pursuant to Judgment dated March 14, 1968, and entered in Los Angeles Superior Court Case No. 850,079 entitled "The City of Los Angeles, Plaintiff, vs. City of San Fernando, et al., Defendants," during the period commencing October 1, 1973, and continuing to and including September 30, 1976.

Said License is granted, subject to the following conditions:

- (1) Licensee shall exercise said right and extract the same on behalf of Forest Lawn Company during the period above specified and put the same to beneficial use and Licensee shall not by the exercise hereunder of said right acquire any right to extract water independent of the rights of Licensee.
- (2) Licensee shall notify the watermaster that said pumping was done pursuant to this License and provide the watermaster with a copy of the document.
- (3) Licensee shall note, in any recording of water production for the period of agreement, that said pumping was done pursuant to this License.

FOREST LAWN COMPANY warrants that it has 6 acre-feet of Restricted Pumping and that it has not pumped and will not pump or permit or license any other person to pump any part of said 6 acre-feet during period of October 1, 1973, through September 30, 1976.

SUPPLEMENTAL LICENSE AGREEMENT

This Supplemental License Agreement between RIVERWOOD RANCH MUTUAL WATER COMPANY (hereinafter referred to as "Licensee") and LOCKHEED AIRCRAFT CORPORATION (hereinafter referred to as "Licensor") was entered into as of February 1, 1970 and pursuant to the "Water Use License Agreement" between the same parties hereunder and of the same date hereunder.

In consideration of Licensor granting a license reflected in said Water Use License Agreement, Licensee hereby assumes the following obligations and liabilities:

(1) Licensee shall pay to Licensor in advance on a quarterly basis during the term of said Water Use License Agreement the sum of Four hundred Dollars (\$400.00) which is based on \$12.50 per acre-foot of water during each quarter. This rental shall be prorated for the first quarter since the water-year commences October 1. All payments shall be made to Lockheed Aircraft Corporation, Cashier's Office, P. O. Box 551, Burbank, California 91503.

(2) The term of the said License Agreement shall expire on September 30, 1972. Licensee is hereby granted an option to renew the term of this Agreement for a period of two (2) years upon giving Licensor ninety (90) days advance written notice of the Licensee's intention to extend the term hereunder. Licensee understands that no further options will be granted.

(3) In the event the Judgment referred to in said Water Use License Agreement is reversed or Licensor is denied restricted Pumping rights pursuant to said Court action or any other Court action, the Water Use License Agreement shall terminate forthwith without liability to Licensor. In the event the said Judgment is modified, reversed or in any way altered so as to require Licensor to pay damages for Licensee's use of Water which exceeds Fifty Dollars (\$50.00) per acre-foot per year, Licensee shall pay to Licensor such excess per acre-foot cost for each acre-foot Licensee used during the term of said Water Use License Agreement.

(4) Licensee hereby agrees to comply with all rules and regulations of the Watermaster in the upper Los Angeles River area and shall make all reports and keep all records required by said Watermaster. Licensee shall forward to Licensor a copy of each report, letter, or other correspondence which Licensee sends to or is required to send to the Watermaster.

(5) In the event Licensee fails to use the full number of acre-feet granted in said Water Use License Agreement during any year of the term of the said Water Use License Agreement, Licensee, at Licensor's option, agrees to modify the Water Use License Agreement to reflect the smaller extraction of water for each succeeding year of the term of said Water Use License Agreement.

(6) Licensee covenants and agrees that it will release and indemnify Licensor, its officers, agents, and employees,

and will save and hold them, and each of them, harmless from any and all claims, damages, losses and/or liabilities of every kind or description arising out of or based upon the use by Licensee of the water rights granted in said Water Use License Agreement at any time during the term or extension of said Water Use License Agreement.

(7) Licensee expressly covenants and agrees that it will not transfer, assign, hypothecate or encumber said Water Use License Agreement or any part thereof or any rights or any interests therein without the written consent of Licensor first had and obtained.

(8) In the event the real property taxes for any year during the term of the said Water Use License Agreement increase from the base year of 1969-1970, the per acre-foot rental during the option period shall be proportionately increased to reflect such increased tax cost to Licensor.

(9) Any notices required to be sent to Licensor shall be sent to P. O. Box 551, Burbank, California 91503, Attention: Manager, Finance Department. Any notices required to be sent to Licensee shall be sent to P. O. Box 146, Sunland, California.

The said parties have executed this Supplemental Agreement as of February 1, 1970.
