

# Groundwater Management and Agricultural Water Management (combined)

Anaheim: Dad Miller Golf Course

Water-Energy Grant Program

---

## Ground Water Management Compliance

Not applicable. The project will not directly affect groundwater levels in a much larger groundwater basin. The project is an irrigation conservation project at a public golf course. Specifically, the work will upgrade a decades-old system to a new system that allows operators to control each irrigation head individually which is expected to save significant water and energy. In addition, the City of Anaheim is not a groundwater monitoring entity. Groundwater monitoring is the responsibility of the Orange County Water District (OCWD).

## Agricultural Water Management Compliance

Not applicable. Anaheim is not an agricultural water supplier and no agricultural water suppliers will receive funding from the proposed grant.

**Note to Evaluators: These two elements were combined into one document because the GRANTS system only allowed up to five attachments for Attachment 1.**
