

ATTACHMENT 3

Work Plan

Includes:

- Description of Project
- District System Maps
 - Work Plan Tasks
- Identified Sites List

Project Description

The Large Landscape Survey and Retrofit Program (LLSR) is an aggressive water conservation program that provides free in-depth water use surveys and some repairs/retrofits to commercial, industrial and institutional (CII) customers in the Upper District's service area. Parks and Schools are targeted due to their large landscaped areas. The Program is currently in place and this proposal is seeking funding to expand the program.

The objective of the Large Landscape Survey and Retrofit Program (program) is to actively increase large landscape irrigation efficiency at CII sites. Up to 70% of all water in the San Gabriel Valley and Southern California is used for landscape irrigation, and this program focuses on efforts to reduce inefficient irrigation situations that commonly occur at CII large landscape sites.

The program includes a survey/assessment and equipment upgrades to selected sites. The survey examines a site's existing irrigation system including irrigation controllers, valves, sprinklerheads, and vegetation. Participating sites are provided a summary report of their irrigation system that includes the following:

- Descriptions of the make, model, and condition of irrigation equipment.
- Pictures of all equipment and vegetation onsite.
- Plot plans of controllers, valves, sprinklerheads, and irrigation zones.
- Site maps of all of irrigation zones and broken equipment.
- Calculation of expected watering requirements based on existing vegetation and a water budget.
- Compliance strategies for the State's Water Efficient Landscape Ordinance (*effective January 1, 2010*).
- Recommended improvements and their estimated cost.

Based on the site surveys, the equipment upgrades are provided to reduce water usage. Equipment is upgraded with weather based irrigation controllers and soil moisture sensors to reduce water use significantly (and lower the cost of a water bill) while improving the condition of the landscaping.

Upper District is currently conducting Phase 2 of this program which includes the retrofitting of previously-surveyed sites within Upper District's service area. A total of 70 sites will be completed (a portion of them include both retrofits and surveys) and is anticipated to save 300 acre-feet per year (AFY), with a lifetime water savings of 3,000 acre-feet over the 10-year lifespan.

This grant proposal is seeking funding to expand the current program into Phase 3. Phase 3 includes conducting water efficient surveys and retrofit improvements at an estimated additional 172 large landscape sites located throughout the Upper District's service area. The LLSR targeted sites are listed at end of this work plan section. Based on survey recommendations, retrofit options include: repair and/or replacing malfunctioning and broken sprinklers, replacing inefficient nozzles with state of the art high efficiency nozzles, retrofit outdated controllers with weather based irrigation controllers (WBICs), and installation of soil moisture sensor systems.

The proposed Phase 3 of the program is estimated to result in a total of 763 acre-feet of annual water savings, and a total lifetime water savings of 7,632 acre-feet within the District over the 10-year lifespan. Upper District relies entirely on imported replenishment water from the Metropolitan

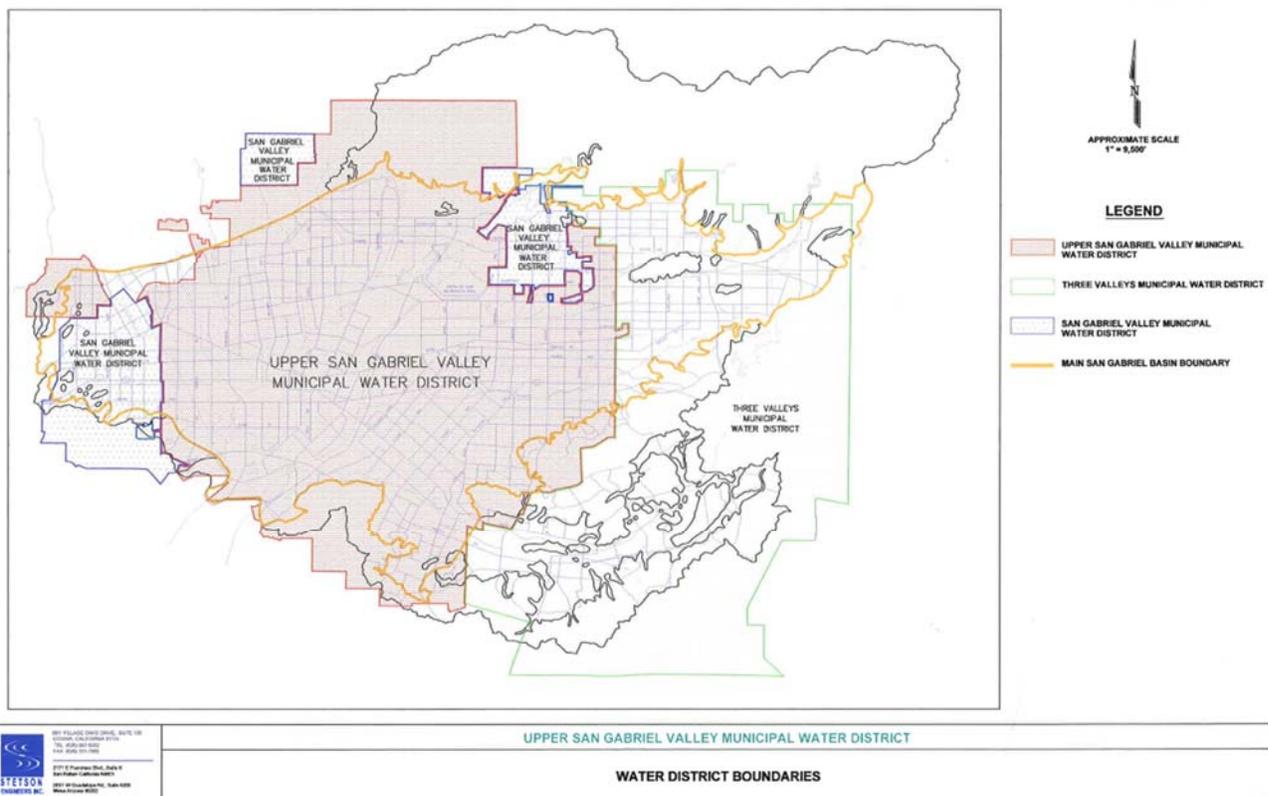

**Upper San Gabriel Valley Municipal Water District
Large Landscape Survey and Retrofit
2014 Water-Energy Grant - Attachment 3, Work Plan**

Water District of Southern California (MWD). Average energy consumption for imported water is 4,432 kWh/AF and the water conserved through this Program is estimated to reduce average annual energy consumption by 60MM kWh.

System map showing project location, associated water infrastructure, entity jurisdictional boundaries associated with infrastructure, and area of benefit.

Upper District is located within San Gabriel Valley in Los Angeles County and overlies the Main San Gabriel Groundwater Basin. Upper District’s service area is approximately 144 square miles and includes all or portions of the Cities of Arcadia, Azusa, Baldwin Park, Bradbury, Covina, Duarte, El Monte, Glendora, Industry, Irwindale, La Puente, Monrovia, Rosemead, San Gabriel, South El Monte, South Pasadena, Temple City, and West Covina. The service area of Upper District is largely urbanized consisting of mainly residential, light industrial and commercial uses. All of the identified project sites are located throughout this area.

Plate 1. Upper District service area boundaries

Upper District operates as a wholesale water distributor that is currently 100% reliant on imported water supplies from MWD for distribution to its twenty nine (29) sub-agencies. Treated imported water is delivered for direct use from Upper District service connections on the MWD distribution system. Untreated imported water is delivered to the Main Basin to satisfy its replacement water obligations required under the Main Basin Judgment.

Work Plan Tasks

Task 1 - Project Administration and Reporting

This task includes management of the grant agreement in compliance with grant requirements, and preparation and submission of supporting documents and coordination with the Grantee.

- Magnitude of task: Execute grant agreement, Submit progress reports, Submit grant invoices, Submit project completion report, Submit grant completion report, and Submit post-performance report.
- Deliverables: Preparation of invoices, submission of quarterly and final reports, and other deliverables as required.

Task 2 - Project Evaluation/Design/Engineering

This task includes ongoing project evaluation and program management to identify participating large landscape sites and oversee project implementation.

- Magnitude of task includes:
 - a) Identify participating large landscape sites
 - b) Observe survey and retrofit site visits periodically
 - c) Review and comment on survey reports
 - d) Issue notices to proceed
 - e) Track scheduled work
 - f) Follow-up on participant inquiries and/or concerns, and
 - g) Determine water and energy savings of installed and/or repaired devices.
- Deliverables: Participating site list, Survey report feedback, and water and energy savings analysis.

Task 3 - Proposal Monitoring Plan

Proposal or Project monitoring will consist of an inventory of installed/retrofitted devices and review/analysis of water consumption data sites (*based on available data*). The success of the project is determined by the number of sites retrofitted and the amount of water conserved.

- Magnitude of task includes: Collect and analyze pre- and post-retrofit water consumption data for a segment of participating sites to determine volumetric changes in water usage.
- Deliverables include: Proposal monitoring plan including water savings analysis.

Task 4 - Project Implementation

Surveys and retrofits of large landscape irrigation systems will be conducted at sites identified in Task 2. The project consultant(s) will schedule and conduct surveys with the customers, collect data, develop water use reports and recommendations, review finalized reports with participating

Upper San Gabriel Valley Municipal Water District
Large Landscape Survey and Retrofit
2014 Water-Energy Grant - Attachment 3, Work Plan

site contact(s), provide retrofit cost estimates to Upper District, repair and/or install irrigation devices as approved by Upper District, and follow up with designated site contact(s).

- Magnitude of task includes:
 - a) Process Request for Survey
Consultant receives request and contacts customer to discuss the program and provide basic information regarding the survey. The survey estimate is then submitted to Upper District for approval for scheduling. Consultant contacts customer again to confirm survey schedule (*within 48 hours of receipt of authorization (notice to proceed)*).
 - b) Survey Field Data Collection
Contractor's Certified Water Auditor (CLIA) or team of auditors, depending on the size of the site, meets on site with customer's representative for introduction and assistance with controller locations (*starts within 5 days of approval, contingent on customer's response and schedule*). Field data collection is conducted by the consultant and includes data on all of the parameters as specified by the Upper District. Field Data is uploaded to consultant's server and report is written and edited by consultant's auditing and report writing team, including the field auditor(s) (*within 48 hours of completion of field data collection*).
 - c) Survey Report Submission and Follow-up
Consultant's survey report is sent to Upper District for approval (*within 2 weeks of receipt of data from field*). After Upper District staff review, the report is distributed to the customer for review and comments. The report will contain a list of system deficiencies and recommendations for water efficient repairs and retrofits.
 - d) Retrofit Cost Estimate
The consultant will provide Upper District with an estimated cost for performing system repairs and/or device retrofits/installations. An estimated number of days for the completion of the work will be included in the cost estimate report. Upon written approval (notice to proceed) by Upper District of the consultant's project estimate for the above work, consultant(s) will notify the customer and schedule the work (*within 5 days*).
 - e) Irrigation System Installation/Retrofit
The consultant will install and/or retrofit irrigation system components detailed in the survey recommendations and authorized by the Upper District. Improvements may include: digging out and replacing broken pipes, broken sprinkler heads, valve adjustments, and minor leak repairs. Installations/retrofits may include: weather based irrigation controllers (WBICs), moisture sensor systems, and retrofit of spray nozzles with higher efficiency nozzles. Devices will include products that qualify as EPA WaterSense certified.
 - f) Consultant Follow-up
Upon completion of the work, the consultant will conduct a job walk with the customer and an Upper District representative as needed to verify completion of the

Upper San Gabriel Valley Municipal Water District
Large Landscape Survey and Retrofit
 2014 Water-Energy Grant - Attachment 3, Work Plan

work and provide an orientation for the customer's maintenance/irrigation manager that will include:

- Review of repairs and/or installations.
 - Instruction on the proper maintenance of installed/repared irrigation devices/system.
 - Irrigation zone maps for each irrigation controller.
 - Follow-up site visit to ensure system is functioning properly (*approximately 3 weeks after completion of repairs and/or installations*).
- Deliverables include: Schedule of site surveys, retrofits, and follow-up visits; Survey cost estimates; Water use survey report and recommendations; retrofit cost estimates; retrofit/repair of approved items; Final summary of all devices installed and repairs completed; Instruction on installed devices; and Irrigation zone maps.

Environmental compliance and permitting

No environmental documentation or permits are required for this program.

The project involves retrofitting existing irrigation controllers and broken/damaged nozzles and sprinkler heads in developed areas. There are no construction related or earthwork activities associated with this project. The work conducted through this project results only in slight modifications that are not extensive in nature and does not occur on any environmentally sensitive sites.

Identified Target LLSR Sites

DAC	Site Name	Site Address	School District / Park Management
YES	Allen J Martin Park	14830 E. Giordano St. La Puente, CA 91744	La Puente City Parks
