Under the acceptable project measures listed...

We would like you to consider adding Dual Toilet Flush Valves. The per toilet estimated savings per toilet per year is 2,113 gallons. With an average of 3 toilets per commercial building that is 6,339 gallons per year saved. We understand the water savings for Pre-Rinse Spray Valves per year is 7,000 gallons per one. Both items provide similar savings.

Thank you for your consideration.
