Comments on Field Schedule for Sniktaw Creek

1.) All water rights listed on the Sniktaw field schedule are for the period of "about April 1 to about October 15" only. See paragraph 26, page 8. Water rights during the period of "about October 15 to about April 1" are defined in paragraph 36, page 9 as "a sufficient amount of water in their priority class to offset reasonable conveyance losses and to deliver 0.01 cfs at the place of use".

2.) Paragraph 25, page 8 allows "water to be diverted in surplus class whenever all downstream diversion systems have sufficient surface flow available to satisfy their numbered priority class rights, provided that an amount equal to or greater than the amount being diverted in surplus class be allowed to flow unobstructed past the diversion facilities for the benefit of fish, and provided further that the allotments to the U. S. Forest Service in paragraph 45 are satisfied".

3.) Paragraphs 37 and 38, page 9 allow: 1.) all water users to rotate between ditches and 2.) any one water right to be diverted at a greater rate to provide a more convenient irrigated head. Practice of both items is limited to a 30-day continuous diversion equivalent and does not impair or infringe on any other water right.
