FOREWORD

The Department of Water Resources, as Watermaster, is pleased to submit this report on water supply conditions in the Central Basin during the 2004-2005 fiscal year. The report is prepared annually in accordance with the provisions of the Los Angeles County Superior Court Judgment in the Central Basin. The Judgment, together with Part 4, Division 2, of the California Water Code, authorizes this publication and the Department's administration of the Watermaster Service Area.

In 2004-2005, the Parties pumped 192,218 of their 241,473 acre-feet of "Allowable Extractions"; 22,792 acre-feet was kept as carryover.

The report includes information on groundwater extractions, use of imported water and recycled water, replenishment operations, and administration of the Water Exchange Pool, and a financial report on Watermaster Service during the 2004-2005 fiscal year.

The Watermaster wishes to acknowledge and express appreciation for the assistance and support received from the many public and private organizations and individuals whose contributions were essential to this report.

The success of Watermaster Service is dependent on continued cooperation and communication between the Watermaster and the water users.

Mark Stuart, Chief
Southern District
and Deputy Watermaster

I. INTRODUCTION

The Central Basin Watermaster Service Area overlies about 227 square miles of the Central Basin in the southeastern part of the Los Angeles Coastal Plain in Los Angeles County (Figure 1). The Watermaster Service Area is bounded by the Newport-Inglewood Uplift on the southwest, the Los Angeles-Orange County line on the southeast, and an irregular line that approximately follows Stocker Street, Martin Luther King Boulevard, Alameda Street, Olympic Boulevard, the boundary between the City of Los Angeles and unincorporated East Los Angeles, and the foot of the Merced and Puente Hills on the north. Twenty-three incorporated cities and several unincorporated areas are found within the Watermaster Service Area. Groundwater in the Central Basin provides a substantial portion of the water supply needed by the residents and industries in the overlying area.

More than 50 years ago, groundwater overdraft and declining water levels in the Central Basin threatened the area's groundwater supply and caused sea water intrusion in the southern part of the Basin. However, timely legal action and adjudication of the water rights halted the overdraft and prevented further damage to the Basin. Today, groundwater use in the Basin is restricted to the adjudicated rights by a Superior Court Judgment and monitored by a court-appointed Watermaster.

The Watermaster assists the Court administer and enforce the provisions of the Judgment. Among other duties, the Watermaster monitors extractions and reports all significant water-related events in the Basin to the Court and to the parties to the Judgment. The activities of the Watermaster are key components for the effective management of the Basin's groundwater resource.

This report summarizes the activities of the Watermaster, the conditions of the groundwater supply, and the quantities of water used and replenished; it also includes a financial report for the 2004-2005 fiscal year. There are three parts to the report: (1) Introduction, (2) Summary of Water Conditions and Operations, and (3) Details of Water Use and Operations, which contains the figures and tables on water supply, water use, water replenishment, and administration costs. Appendix A contains the continuing history of Watermaster Service operations and the duties and functions of the Watermaster. Appendix B contains the succession of allowed pumping allocations. Appendix C contains groundwater extractions. Appendix D contains changes in well status.

FIGURE 1 - CENTRAL BASIN

II. SUMMARY OF WATER CONDITIONS AND OPERATIONS

Tables and figures referred to in the text that follows are for Fiscal Year 2004-2005.

Average Rainfall (Figure 3)

- 29.20 inches, 209 percent of the calculated 90-year average rainfall on the Coastal Plain.
- Mean seasonal precipitation on the Basin (base period 1897 - 1947) ranges from 12 inches at Long Beach to 16 inches at Whittier Narrows.

Replenishment (Table 5)

- Overall replenishment operations increased by 127 percent, excluding water used for sea water intrusion barrier operations.
- 152,991 acre-feet of storm runoff was recharged, 116,863 acre-feet more this year than last year.
- 25,833 acre-feet of imported water was purchased and spread this year (5,464 more than the amount purchased and spread last year).
- 15 percent of the total water spread was recycled water from three nearby water reclamation plants.

Parties Wells

- 319 active and 135 inactive wells.
- 6 wells drilled, 16 destroyed. (Appendix D)

Alamitos Barrier Project Operations (Table 6)

43 injection wells, 4 extraction wells, and 227 observation wells operating.

Water Quality

- The following averages were compiled for 2004-2005. Data were provided by Central Basin Municipal Water District and the Metropolitan Water District of Southern California.

Mean Values of Concentrations, in mg/L

<u>Constituent</u>	<u>Groundwater</u>	<u>Colorado River water at Lake Mathews</u>	<u>State Water Project water at Castaic Lake</u>
Chloride	130	89	57
Sulfate	37	249	53
Hardness (as CaCO ₃)	230	294	122
TDS	500	625	267

Exchange Pool (Table 7)

- There was no Exchange Pool administered for this fiscal year.

Water Right Sales and Leases

- There was one sale this fiscal year.
- Sales have reduced number of Parties from 508 (1966-67) to 143 (2004-2005).
- This fiscal year, 47 leases totaling 17,523.47 acre-feet were made.

In-Lieu Replenishment Program (Table 9)

Water Replenishment District of Southern California (WRD), in cooperation with the Metropolitan Water District of Southern California (MWD), operates an in-lieu replenishment program. The City of Long Beach participated in the program for a total of 6,000.00 acre-feet.

Overextractions (Table 3)

- Ten parties including the State of California (Caltrans) overextracted. State of California and the City of Whittier, are in violation of the judgment. Midland Park Water Trust discontinued pumping after September 2001 in a move to eliminate its cumulative overextraction. San Gabriel Valley Water Company notified Watermaster on May 23, 2005 that they underestimated their water requirements this year, and that they will make up the deficit next year by reducing pumping and increasing their imports from the main San Gabriel Basin.

California Department of Transportation (Caltrans)

- Caltrans pumped 13,305.70 acre-feet of water during 1997-98 through 2003-2004, and 1,677.83 acre-feet in 2004-2005. Since 1999-2000, Caltrans has been pumping about 2,000 acre-feet of water per year and has been discharging this water to the Los Angeles and the San Gabriel Rivers.

Caltrans representatives have been meeting with the Water Replenishment District and with pumpers during the last eight years to resolve issues involving water rights, replenishment assessments, and disposal of the water, and treatment and use of the water.

Watermaster is monitoring these discussions in an effort to resolve these issues and find a way that Caltrans can operate within the decree. Watermaster met with the Caltrans District Director to discuss alternatives.

Water Use (Tables 1, 10 and Appendix C)

- In fiscal year 2004-2005, extractions were 25,149 acre-feet less than the total Allowed Pumping Allocation, whereas in fiscal year 2004-2005, extractions were 21,466 acre-feet less than the Allowed Pumping Allocation.
- Imports decreased 17.7 percent. Recycled use decreased 17.8 percent.
- Exports decreased 12.2 percent.
- Total water use decreased 10.4 percent. Parties supplied 375,739 acre-feet to their customers; this does not include the amount pumped by Caltrans and discharged to the Los Angeles and San Gabriel Rivers.

Long Beach Conjunctive Use Program

In the last three fiscal years, Long Beach claims the following quantities of stored water, in acre-feet:

F.Y. 2003	790
F.Y. 2004	12, 210
F.Y. 2005	<u>2,244.9*</u>
Total to date:	15,244.9

* Stored for the Leo Vander Lans Plant operation.

Watermaster is reporting these values, without acknowledging their legal standing under the Judgment. According to the Judgment, Long Beach lost 2,320.93 acre-feet of allowable pumping during the 2005 Fiscal Year.

Imported Water (Table 10)

- In fiscal year 2004-2005, a total of 177,479 acre-feet of water was imported to Central Basin.
- Water from the Colorado River and water from the State Water Project arrives through MWD's facilities for distribution throughout the Basin by the following agencies:
 1. Cities of Compton, Long Beach, and Los Angeles;
 2. Central Basin Municipal Water District (CBMWD); and
 3. West Basin Municipal Water District (WBMWD). Only a small portion of water is being imported via California Water Service Company (Dominguez) and is not shown in totals.
- The City of Los Angeles also imports water from the Owens River-Mono Basin.
- California Domestic Water Company, San Gabriel Valley Water Company, Suburban Water Systems, and the City of Whittier import groundwater from the San Gabriel Basin.

Exported Water

California-American Water Company exported 2,203 acre-feet to its service area in the West Coast Basin.

Recycled Water (Table 10)

- Excluding recycled water used to recharge groundwater aquifers of Central Basin, recycled water use amounted to 9,923 acre-feet (2,149 acre-foot decrease from last year).

Budget (Table 12)

- The budget was submitted to the Parties on May 24, 2004, and adopted as the final budget on June 10, 2004.

Apportionment of Parties' Share of Budget (Table 13)

- A 5 percent penalty is assessed if payments become delinquent.
- Eighteen parties were penalized because their payments were not made within the allowable 30 days after service of the invoice.
- Assessments totaling \$1,119.76 was collected for delayed payments.

TABLE 1. SUMMARY OF OPERATIONS

	Fiscal Year 2003-2004	Fiscal Year 2004-2005
Parties	143	143
Active Pumpers	82	73
Active nonparties	5	5
Allowed Pumping Allocation, (APA) in acre-feet	217,367	217,367
Watermaster expenses	\$ 390,706	\$ 434,146
Watermaster expenses per acre-foot of APA	\$ 1.80	\$ 2.00
Rainfall, in inches	9.01	29.20
Injection at Alamitos Barrier Project, in acre-feet*	5,880	5,066
Spreading operations, in acre-feet*	92,316	209,212
Extractions, in acre-feet**	195,901	192,218
Imports, in acre-feet***	215,535	177,479
Exported, in acre-feet	-2,509 ##	-2,203
Recycled water use, in acre-feet	12,072	9,923
Total water use by Parties, in acre-feet#	420,999 ##	377,417
* Provisional information from Los Angeles County Department of Public Works.		
** Excludes extractions from nonparties.		
*** Includes imports of San Gabriel Basin groundwater.		
# Excludes amounts used for groundwater recharge.		
## Revised.

Total				-16,459.60	

* Judgment allows overextractions computed as 20 acre-feet or 20 percent of the "Allowed Pumping Allocation" + carryover provisions; whichever is greater.

** WRD Resolution 03-684 granted a non-consumptive use permit allowing Ashland Chemical Company to extract 625.00 acre-feet of water during the period from May 26, 1999, through June 30, 2008.

*** Includes production by Caltrans. Dewatering under 105 Freeway in Downey. Caltrans is negotiating a settlement on water rights.

Violation of Judgment.

#* See explanation on page 4.

APPENDIX A

CONTINUING HISTORY OF WATERMASTER SERVICE

History of Water Resources Development

More than one hundred years ago the Los Angeles Coastal Plain was on the threshold of a sharp increase in population. The key to its future was water.

A shortage of sufficient year-round surface water in the Central Basin forced the development of groundwater sources. As early as 1870, water users had tapped the artesian wells and springs east of the Newport-Inglewood Uplift. When those wells stopped flowing, users were forced to drill shallow wells, which supplied enough water to continue development and economic growth.

Groundwater development increased dramatically in 1909 with the advent of the deep-well turbine pump. Its tremendous adaptability and superior operating characteristics provided efficient water wells within economic reach of everyone. In time, the availability of reliable water supplies attracted industry and agriculture. Eventually, however, the demand for groundwater exceeded the natural replenishment of the Central Basin.

The resulting overdraft affected the groundwater basin by lowering the water levels and by causing oceanfront areas to be subjected to sea water intrusion.

The deteriorating groundwater situation in the Central Basin and in the adjoining West Coast Basin led to the formation of the Central Basin Water Association in 1950, similar to the water association in the West Coast Basin. This led to a plan to achieve the following results:

1. Provide supplemental water to major producers;
2. Limit groundwater extractions from the Central Basin; and
3. Create an exchange water pool to provide groundwater pumping rights for users lacking access to other supplemental water supplies.

Step 1 was realized in 1952 when the Central Basin Municipal Water District was formed to distribute water from the Colorado River. The district was annexed to The Metropolitan Water District of Southern California (MWD) in 1954, and Colorado River water soon flowed into the Central Basin. State Water Project water was first delivered in 1973.

The West Basin and the Central Basin Water Associations were largely responsible for the creation of the Central and West Basin Water Replenishment District (CWBWRD) in 1959. This special district covers 420 square miles of the Central and West Coast Basins (Coastal Plain) of Los Angeles County. Its objective is to replenish and maintain the groundwater basins by purchasing imported water, recharging the basins, and halting

sea water intrusion.

On January 2, 1962, the CWBWRD filed Case No. 786,656 in the Superior Court, County of Los Angeles, naming more than 700 parties as defendants. It sought to obtain quiet title to rights to the use of groundwater, to secure a judicial definition of each right as against each and every other right involved, and to regulate withdrawals from the Central Basin to protect the water supply from deterioration.

Adverse groundwater conditions and the indefinite period before final adjudication prompted the Central Basin Water Association to draft an interim agreement curtailing extractions from the Basin. By September 1962, the proposed agreement had been approved by a sufficient number of water producers (producers owning more than 75 percent of the Assumed Relative Rights within the Basin) to guarantee control over groundwater pumping in the Basin. On September 28, 1962, the Court signed the "Order Pursuant to Stipulation and Interim Agreement and Petition for Order" and appointed the Department of Water Resources (DWR) as Watermaster.

To avoid the protracted litigation experienced by other Watermaster service areas in Los Angeles County, the attorneys representing principal parties held monthly meetings to work out a settlement. A stipulated judgment was drafted. Approval by public utility water companies and other producers represented well over 200,000 acre-feet, 75 percent, of the total rights within the Basin. This was a prerequisite to filing the stipulated judgment with the Court.

A pretrial hearing was held in March 1965, and on May 17, 1965, the case went to trial before Judge Edmund M. Moor. After a week's testimony on engineering, geology, hydrology, and safe yield of the Basin and arguments on water right entitlement, the case was continued to August 25, 1965. Shortly thereafter, Judge Moor appointed DWR as Watermaster. The final Judgment was signed on October 11, 1965 and became effective on October 1, 1966.

The Judgment was amended on March 21, 1980, to provide for a transition in the administrative year from a water year (October 1 to September 30) to a fiscal year (July 1 to June 30). Under the Judgment, this transition in turn contained a "short" administrative year of nine months -- October 1, 1980, to June 30, 1981. The administrative year starting July 1, 1981, was on a fiscal year basis.

The Judgment was again amended on July 9, 1985, modifying the annual budget (\$20 minimum assessment) and exchange pool provisions. The second amended Judgment of May 6, 1991, modified the carryover and overproduction provisions (to 20 percent or 20 acre-feet from 10 percent or 10 acre-feet), defined drought carryover, and provided for exemptions for extractors of contaminated groundwater.

On January 12, 2001 by order of Watermaster, the Water Replenishment District of Southern California issued Non-Consumptive Use Permit No. 2000-01 to the Southeast Water Coalition for the "Central Basin Early Remediation Project" to remedy or ameliorate groundwater contamination that originated in the San Gabriel Valley and that has moved into the northeast portion of the Central Groundwater Basin.

Watermaster Service

Watermaster Service is administered by DWR in accordance with Part 4, Division 2, of the California Water Code. Watermaster service areas are created by DWR, either at the request of water users or by order of the Superior Court. The first Watermaster service area was formed in September 1929.

Once a month, every groundwater pumper reports its extractions to the Watermaster. This makes it possible to update the water right account (Watermaster Water Production Summary) by computing the amount pumped during the previous month, the amount pumped during the current fiscal year, and the amount that can legally be pumped during the remainder of the year. A copy of the Watermaster Water Production Summary is mailed to the pumper each month and posted on the internet.

If electric meter readings are reported along with water meter readings, electric power consumption can be correlated with water production. Erratic or rapidly increasing electric power consumption versus water production, for instance, may suggest an inefficient pump, system losses, or an inaccurate or malfunctioning water meter.

The Watermaster's field staff schedules tests to determine water meter accuracy on every active well. Large systems are tested at least once every two years. Accurate measurement of groundwater extractions is absolutely necessary for the success of the Basin's management plan. All available means, including system efficiency tests, are used to confirm water meter test results. Results of each test are furnished to the well owner. If a meter is inaccurate beyond plus or minus 5 percent, it must be repaired within 30 days. Follow-up tests on repaired meters and initial tests on new meters are scheduled whenever necessary. Parties may also request a meter test at any time.

Water Replenishment District of Southern California

The Central and West Basin Water Replenishment District changed its name to Water Replenishment District of Southern California (WRD). WRD is responsible for replenishing the groundwater supply to both the Central and West Coast Basins.

The creation of water replenishment districts is a statutory procedure established by the Legislature. Division 18 of the California Water Code describes the duties and obligations of such a district, which has powers well suited to solving groundwater problems, whether they be quality- or quantity-oriented.

WRD is comprised of a Board of Directors and a staff. It is actively engaged in several replenishment programs. These programs, (i.e., water spreading, barrier operation, and in-lieu replenishment), are described in this report. WRD also publishes an annual report of its operations. (Additional information may be obtained from its staff, 12621 East 166th Street, Cerritos, CA 90703; phone 562-921-5521; www.wrd.org).

The Watermaster cooperates closely with WRD for the following reasons: (1) Watermaster service areas in the Central and West Coast Basins closely match the district boundaries; (2) both WRD and the Watermaster are required to record all groundwater extractions from the Basins; (3) WRD was the plaintiff in the Central Basin Water Right Case (Case No. 786,656, Superior Court, Los Angeles County); and (4) both WRD and the Watermaster are concerned with the usefulness of the groundwater basins in the Coastal Plain. Many of the Watermaster's data collection programs are coordinated with the WRD to prevent duplication. Hence, monthly or quarterly water well production reports are sent to the Watermaster through WRD.

Water from many sources is required to serve the needs of Southern California's thriving urban economy. Water from the Colorado River, the Owens River-Mono Basin, and northern California; runoff from local mountains, local groundwater, and recycled water contribute to the water supply.

Local precipitation on the Basin has only a small direct influence on the recharge of groundwater supply in the Central Basin because a layer of impermeable material lies between the surface and the producing aquifers, except in the forebay areas. As a consequence, very little of the rain which falls directly on the Basin reaches the zones where it can be pumped back to the surface.

Groundwater Recharge

Natural replenishment of the Basin's groundwater supply is largely from surface inflow through Whittier Narrows (and some underflow) from the San Gabriel Valley. Some of the water that percolates into the forebay areas of the Central Basin eventually crosses the barrier between the Central Basin and the West Coast Basin and flows into the West Coast Basin.

Outflow and extractions have exceeded natural replenishment. Extractions controlled by the Judgment are fairly constant year to year. Today, attempts are made to reestablish nature's balance by natural, artificial, and in-lieu replenishment.

In one common method of replenishment, water spreading, water is flooded on areas where it can percolate into the underground aquifers and can supplement the natural recharge supply. Large quantities of water can be returned to the ground by spreading, but the process is limited by the space available for facilities for spreading and by the ability of the recharge aquifers to percolate water back to the Basin. Imported water purchased from the Metropolitan Water District and recycled water from the Whittier Narrows, the San Jose Creek and the Pomona Water Reclamation Plants are used for artificial recharge.

In-Lieu Replenishment

During the 1965-66 water year, WRD began a program of in-lieu replenishment. The program is authorized by Section 60230 of the California Water Code. In effect, WRD was given the power to contract with any producer having access to supplemental water that can be used instead of pumping water from the ground.

The program may be used to achieve the following purposes: alter pumping patterns within a groundwater basin; replenish areas of low transmissivity where conventional recharge techniques are ineffective; heighten the effect of injecting water to form a sea water barrier by reducing extractions in the vicinity; reduce the amount of replenishment water purchased by WRD; and reduce the annual extractions from a groundwater basin (See Table 9).

Alamitos Barrier Project

The Alamitos Barrier Project (Figure 4 and Table 6), designed to prevent sea water intrusion into the fresh water aquifers of the Central Basin, is of great importance to water users in the Central Basin.

Sea water intrusion at the mouth of the San Gabriel River (Alamitos Gap) poses a serious threat to the groundwater supply. This area has seven water-bearing zones identified in downward order as the Recent aquifer, C Zone, B Zone, A Zone, I Zone, Main (Silverado) aquifer, and Lower Zone (Sunnyside) aquifer.

Sea water intrusion occurs through the Recent aquifer, which is very permeable and open to the sea. The C, B, A, and I Zones merge with the Recent aquifer and are, therefore, susceptible to intrusion, as can be noted by the varying degrees of salinity occurring in the water in each zone. The saline water intrusion has been detected as far as 10,000 feet landward of the Newport-Inglewood fault zone and, if unchecked, the intrusion could extend into the Silverado and Sunnyside aquifers, which are the principal groundwater-producing zones in the Basin.

The Los Angeles County Department of Public Works operates a barrier comprised of a saline water extraction trough and a fresh water injection pressure ridge to halt intrusion. In addition to the extraction wells and injection wells required, a number of observation wells are also part of the project. These provide data along the barrier and are used to monitor groundwater levels and water quality in this area.

The information from this monitoring program will be utilized in determining if additional barrier facilities are necessary. Since operation of the barrier began in 1965, the sea water intrusion problem has been contained.

Basinwide Water Quality Monitoring

In compliance with Title 22 of the California Administrative Code, the Central Basin Water Association is involved in a basinwide plan to monitor the quality of water being pumped for domestic use.

Primary responsibility for enforcement of the 1974 National Drinking Water Act, as embodied in the National Interim Primary Drinking Water Standards, was given to the states. California has assumed primary enforcement responsibility through passage of Senate Bill 1078, signed by the Governor in October 1976.

Groundwater Levels

Every water well owner in the Central Basin is concerned with groundwater levels because the cost of pumping water is largely dependent on the distance it must be lifted. Energy costs have risen dramatically and are expected to continue to rise in the foreseeable future.

Figure 6 shows water level information in the form of selected hydrographs. The hydrographs are representative of water levels in wells producing from several aquifers underlying the Basin. Additional water level information is contained in WRD's annual report.

Prior to 1961, groundwater from the Basin satisfied most of the demand. However, the Judgment reduced extractions to 217,367 acre-feet annually, so imported water has become a major component of the area's water supply.

Figure 7 illustrates the groundwater extractions and imported water use from 1957-58 to the present, less San Gabriel Valley imports. Much of the increase in demand for imported water during the mid-1960s may be attributed to the curtailment of groundwater extractions. Since the early 1970s the demand for imported water has leveled off.

Groundwater Extractions

The Central Basin Judgment limits the amount of groundwater each party can extract annually from the Basin (Appendix B). This limit is referred to as the "Allowed Pumping Allocation" (APA). Recipients of Exchange Pool water may pump the amount released to them in addition to their APA.

The monthly groundwater production from each active well in the Basin is listed by Party in Appendix C. Water wells producing less than 25 acre-feet per year do not require a meter and their production, which may be reported on a quarterly basis, is also included in Appendix C. Wells where groundwater was extracted are shown on Plate 1.

To provide flexibility in the control of groundwater extractions, the Judgment contains provisions allowing the parties to carry over into the succeeding water year a portion of their unused water rights and in some cases to overextract. This flexibility was necessary to meet unforeseen emergencies in water demand.

One provision allows parties to carry over from one water year to another any unused APA not to exceed 20 percent of their APA or 20 acre-feet, whichever is greater*. In addition, any unused Exchange Pool water can be carried over into the following fiscal year.

*This provision of the Judgment was amended to permit all parties full 100 percent carryover from 1976-77 and 1977-78 because of the drought.

Parties are also allowed to overextract by 20 percent of their APA or 20 acre-feet, whichever is greater. Under certain circumstances, parties may overextract in greater amounts; however, prior approval by the Watermaster must be obtained. In any case, the overextraction must be made up the following fiscal year unless Watermaster grants relief due to an unreasonable hardship; such relief can be prorated over a 5-year period.

Water Well Identification

A State Well Number identifying water wells in the Central Basin is derived from a system based on the U. S. Public Land Survey. Each number consists of township and range designations, a section number, a letter representing the 40-acre tract in which the well is situated, a sequence number indicating the chronological order in which the well number was assigned, and a letter representing the base and meridian. The last letter is frequently omitted from well numbers in a single area because all wells there share a single base and meridian. The components of Well 3S/11W-12C03S, for example, are identified in Figure 8.

Well numbers are assigned and recorded by the Department of Water Resources. In addition, information on each well shown on Plate 1 is maintained in the Watermaster's office.

ADMINISTRATION OF JUDGMENT

The Central Basin Judgment contains provisions for the parties to obtain additional pumping rights, to exceed entitled extractions, or to vary annual pumping. The procedure thus established is described below.

Exchange Pool

The Court and parties foresaw that adjudicating the water rights in the Central Basin and limiting the total extractions would not suffice for all parties. For this reason, Part III, Subpart C of the Judgment authorizes an Exchange Pool to provide additional water rights for parties without a supplementary supply.

On or about July 1 of each year, the Watermaster mails an Exchange Pool form to each party, requesting that the form be completed and returned to the Watermaster by August 9. The form provides for making mandatory offers of water rights to the pool, referred to as "Required Subscription" in the Judgment; voluntary offers referred to as "Voluntary Subscription"; and making requests for water rights from the pool. In completing the form, the member must estimate his water needs and supply for the, ensuing fiscal year.

Requests

A request for Exchange Pool water may be made when a Party's estimated needs exceed its total supply, including leases. A Category (a) Request is defined as that quantity requested by a member not in excess of 150 percent of his APA or 100 acre-feet, whichever is greater. Category (b) Requests are those which exceed the 150 percent or 100-acre-foot limitation. Whenever there are insufficient Voluntary Subscriptions to meet

all Category (a) Requests, Required Subscriptions may be used. All Category (a) Requests shall be filled first before any Category (b) Requests are filled. Category (b) Requests are filled first by any remaining Voluntary Subscriptions before the Required Subscriptions are used.

A Required Subscription can be made to the pool when a member has a connection to supplementary water and can obtain imported water from MWD or the Central and West Basin Municipal Water District. The Required Subscription is limited to 20 percent of the member's APA, except that the Required Subscription, plus the party's water needs, for the year, cannot exceed the party's total supply.

A Voluntary Subscription can be made by any member of the Exchange Pool. The only requirement is that the member's supply must exceed its estimated needs and only the difference between the member's supply and needs may be offered.

However, the Watermaster must first allocate all the Voluntary Subscriptions before using the Required Subscriptions in filling Category (a) Requests and Category (b) Requests.

Experience has shown that Voluntary Subscriptions have always been sufficient to meet all the Category (a) Requests; as a result, no Required Subscriptions have been used to fill Category (a) Requests.

The price charged for Exchange Pool water rights is fixed by Part III, Subpart C, Paragraph 10 of the Judgment. This provision was amended by the Court order on July 9, 1985. The price is now based primarily on: (a) the weighted daily normal price as of the beginning of the administrative year charged by the Central Basin Municipal Water District for treated MWD water used by the exchangers during the preceding fiscal year (July 1 - June 30); (b) less the incremental cost of pumping water in the Basin at the beginning of the administrative year determined by Southern California Edison Company's schedule PA-1 rate multiplied by 560 kilowatt-hours per acre-foot rounded to the nearest dollar; and (c) less the current replenishment assessment. Because item (a) varies among exchangers and items (b) and (c) vary from year to year, the cost of Exchange Pool water will likewise vary among exchangers and from year to year.

Exchange Pool Carryover

The Judgment provided that the parties be allowed to pump their entire exchange-water-right purchases, regardless of the provisions limiting carryover of water rights. Therefore, a specific exchange water carryover provision was drafted and included in the Judgment.

The provision specifically allows a party which purchased exchange pool water to carry over the unpumped portion of its allowable extraction into the next succeeding administrative year. The carryover cost is authorized by the Judgment and is based on the difference in the prices of Exchange Pool water between the year the water was purchased and the succeeding year.

Transfers of Allowed Pumping Allocations

The Central Basin Exchange Pool is not the only method of obtaining additional pumping rights. Each water year, there are many water-right leases and sales between parties. In Appendix B there are also recorded sales of water rights between parties and the current ownership of Allowed Pumping Allocations by each of the parties as of June 30.

Suggested samples of water right lease and sale agreements are illustrated in Appendix B. The Watermaster recommends that all documents be prepared on an 8-1/2 x 11-inch sheet of paper. Any necessary additions to the recommended agreement may be attached on another page. These sample documents do not have to be used, but they are sufficient for most purposes.

When property on which water rights have been developed is sold, the Watermaster must be furnished a copy of the sale document. The sale document is required for the proper accounting of the water rights. The Watermaster assumes that the water rights pass to the new owner unless ownership of the water rights is specifically reserved in the sale document.

In leasing, buying, or selling water rights, parties should be specific as to the type, i.e., Total Water Right or Allowed Pumping Allocation. All leases should be entered into on the basis of Allowed Pumping Allocation, whereas sales should specify both amount of Total Water Right and amount of Allowed Pumping Allocation, each to the nearest whole acre-foot. All water-right leases should be made on a fiscal year basis, i.e., July 1 of one calendar year through June 30 of the following year.

The Watermaster keeps a list of parties who have expressed their interest in buying, selling, or leasing water rights. Any party wishing to be listed should call the Watermaster. This is a courtesy to assist parties unable to resolve problems regarding an excess or deficiency of water rights. Watermaster will make no recommendation regarding transactions conducted relative to the use of this service. The names of all parties using this service are available in the Watermaster's office and may be obtained by telephone or by a visit to the office.

Overextractions

Each year some parties extract more groundwater from the Central Basin than they are entitled to. The overextractions are usually small and are usually within the tolerance set by the Judgment. Each party may overextract by 20 acre-feet or 20 percent of its Allowed Pumping Allocation, whichever is greater, on the premise that the overextraction will be eliminated during the following fiscal year. Any overextractions above this limit must have prior approval of the Watermaster. Most overextractions are caused by unexpected increases in water demand, so it would be unreasonable not to allow some deviation from the limits and guidelines of the Judgment.

Findings and Determinations by Watermaster

From time to time, the Watermaster evaluates historical groundwater production records of parties at the request of the parties or at the Watermaster's discretion. In some

instances, the evaluations and findings result in minor uncontested changes in the production records which may be to the benefit of or to the detriment of the party.

Carryover of Allowed Pumping Allocation

The provision in the Judgment (Subpart A, Part III)* relative to allowable carryover of unused water rights states in part: "Each party ... who ... does not extract ... a total quantity equal to such party's Allowed Pumping Allocation for the particular Administrative year ... is permitted to carry over from such Administrative year the right to extract from Central Basin in the next succeeding Administrative year so much of said total quantity as it did not extract not to exceed 20% of such party's Allowed Pumping Allocation, or 20 acre-feet, whichever ... is the larger." (Underlining added.)

The method of computing the carryover and allowable overextractions was changed, effective in the 1972-73 fiscal year. It is now assumed that, when not specifically passed to the lessee by the lease document, the amount leased is not deducted from the lessor's Allowed Pumping Allocation for computing the carryover or allowable overextraction. All future lease documents must contain a statement as to which party receives the benefit of the amount leased for computing carryover or overextractions. Item (5) in suggested Water Right License and Agreement is sufficient for this requirement (see Appendix B).

Cost of Watermaster Service

The Judgment requires that the Watermaster prepare and mail a copy of the tentative budget to each of the parties at least 60 days before the beginning of each fiscal year. If no objections are received within 15 days after submitting the budget, it becomes final.

The administrative cost chargeable to the parties was apportioned among the parties as directed by the Judgment. The Judgment provides that, if the amount to be assessed to each party of the final budget is equal to or less than \$20 per party, the cost shall be equally apportioned among the parties. However, if the party's share of the budget is greater than \$20, each party will be assessed a minimum of \$20 and the total amount collected will be deducted from the parties' share of the budget. The balance to be collected is then assessed among the parties in proportion to their Allowed Pumping Allocations.

* This provision of the Judgment was amended because of the drought to permit all 206 parties full carryover for the 1976-77 and 1977-78 fiscal years.

Rights to Store Water

Appellate Decision: The cities of Long Beach, Downey, Lakewood, Signal Hill, Santa Fe Springs, Pico Rivera, and Paramount and Southern California Water Company, California Water Service Company, Montebello Land and Water Company, South Montebello Irrigation District, and Tract 349 Mutual Water Company filed suit to amend the Central Basin judgment to allow parties to store water in the basin. The Superior Court denied the petition, but the parties appealed. On June 12, 2003, the California Appeals Court released its opinion, which denied the proposed amendment.

Conjunctive Use Working Group: Starting in 2002, DWR began assembling the parties interested in discussing storage and conjunctive use in the groundwater basins. The first meeting of a Conjunctive Use Working Group was on July 24, 2003. Numerous meetings were held in 2003 and 2004. In late 2004 and early 2005, numerous offers and counter offers were exchanged. After numerous meetings of the Working Group and its committees, the Group held its last meeting on April 19, 2005.

WRD Interim Storage Rules: On March 30, 2005, WRD sent out "Solicitation of Public Comments for Rules to Coordinate Storage of Water in Southeast Los Angeles County". These draft rules proposed to govern storage of water in the groundwater basins "outside the judgment". The Interim Rules were adopted by WRD May 18, 2005. Watermaster has taken no official position with regard to WRD's ability to address storage without modifying the Central Basin judgment.

Storage Projects: Prior to WRD's adoption of the Interim Rules, WRD and the City of Long Beach signed an agreement governing the City's groundwater storage project. The City of Compton signed a similar agreement with MWD for their storage project.
