Subject: RE: ordinance

I know you must be very busy so hope it is OK to email you one or two queries:

1. Is there a definition of "rehabilitated" or "rehabilitate" when work is done on an existing landscape, in other words for purposes of the Model Water Ordinance

Comment 007.1

what is the threshold for application of the model ordinance is there a percentage of plant material removed minimum square feet, or percentage of the landscaped area of a project?

Comment 007.2

Am assuming that if an irrigation system that is non-conforming with respect to the ordinance is replaced, the replacement system must conform.

Comment 007.3

We are a 1.9 sq. mile 36 k population so we no development on raw land such as subdivisions so the definition of rehabilitation is perhaps more important for us as most everything is already built here.

2. Do you know how other small cities have handled the responsibilities of review and inspection of landscape and irrigation plans and installations. as to what department does it, use of outside consultants or not etc

Comment 007.4

Thanks
